

Curriculum Structure

(Effective from 2018-19 Admission Batch)

Department: Information Technology

Curriculum for B. Tech Under Autonomy
(GR A: ECE, EE, BME; GR B: CSE, IT, ME, CE)

1 st Semester								
Sl No	Course Code	Paper Code	Theory	Contact Hours /Week				Credit Points
				L	T	P	Total	
A. THEORY								
1	BS	M101	Mathematics -I	3	1	0	4	4
2	BS	CH101/ PH101	Chemistry (Gr. A) / Physics- I (Gr. B)	3	0	0	3	3
3	ES	EE101/ EC101	Basic Electrical Engineering (Gr. A) / Basic Electronics Engineering (Gr. B)	3	0	0	3	3
4	HS	HU101	English	2	0	0	2	2
B. PRACTICAL								
5	BS	CH191/ PH191	Chemistry Lab (Gr. A) / Physics- I Lab (Gr. B)	0	0	3	3	1.5
6	ES	EE191/ EC191	Basic Electrical Engineering Lab (Gr. A) / Basic Electronics Engineering Lab (Gr. B)	0	0	3	3	1.5
7	ES	ME191/ ME192	Engineering Graphics & Design (Gr A) / Workshop / Manufacturing Practices (Gr-B)	0	0	3	3	1.5
8	PROJ	PR191	Project-IA	0	0	1	1	0.5
9	PROJ	PR192	Project-IB	0	0	1	1	0.5
C. MANDATORY ACTIVITIES / COURSES								
10	MC	MC181	Induction Program	0	0	0	0	
Total of Theory, Practical & Mandatory Activities/Courses							23	17.5

2 nd Semester								
SI No	Course Code	Paper Code	Theory	Credit Hours /Week				Credit Points
				L	T	P	Total	
A. THEORY								
1	BS	M201	Mathematics -II	3	1	0	4	4
2	BS	CH201/ PH201	Chemistry - (Gr. B) /Physics – I (Gr. A)	3	0	0	3	3
3	ES	EE201/ EC201	Basic Electrical Engineering (Gr. B) / Basic Electronics Engineering (Gr. A)	3	0	0	3	3
4	ES	CS201	Programming for Problem Solving	3	0	0	3	3
5	ES	ME201	Engineering Mechanics	3	0	0	3	3
B. PRACTICAL								
6	ES	CS291	Programming for Problem Solving Lab	0	0	3	3	1.5
7	BS	CH291/ PH291	Chemistry Lab (Gr. B) / Physics - I Lab (Gr. A)	0	0	3	3	1.5
8	ES	EE291/ EC291	Basic Electrical Engineering Lab (Gr. B) / Basic Electronics Engineering Lab (Gr. A)	0	0	3	3	1.5
9	ES	ME291/ ME292	Engineering Graphics & Design (Gr B) / Workshop/Manufacturing Practice (Gr-A)	0	0	3	3	1.5
10	HS	HU291	Language Lab	0	0	2	2	1
11	PROJ	PR291	Project-II	0	0	1	1	0.5
12	PROJ*	PR292	Innovative Activities-I	0	0	0	0	0.5
C. MANDATORY ACTIVITIES / COURSES								
13	MC	MC281	NSS/ Physical Activities/Meditation & Yoga/Photography/ Nature Club	0	0	0	3	
Total of Theory, Practical & Mandatory Activities/Courses							34	24.0

* Inter/ Intra Institutional Activities viz; Training with higher Institutions; Soft skill training organized by Training and Placement Cell of the respective institutions; contribution at incubation/ innovation /entrepreneurship cell of the institute; participation in conferences/ workshops/ competitions etc.; Learning at Departmental Lab/ Tinkering Lab/ Institutional workshop; Working in all the activities of Institute's Innovation Council for eg: IPR workshop/Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos etc. (evaluation by Programme Head through certification)

Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

3 rd Semester								
Sl No	Course Code	Paper Code	Theory	Contact Hours /Week				Credit Points
				L	T	P	Total	
A. THEORY								
1	PC	IT301	Data Structure and Algorithm	3	0	0	3	3
2	PC	IT302	Analog and Digital Electronics	3	0	0	3	3
3	BS	M(IT)301	Mathematics -III	3	1	0	4	4
4	BS	PH301	Physics-II	3	0	0	3	3
5	ES	M(IT)302	Numerical Methods and Statistics	3	0	0	3	3
B. PRACTICAL								
6	PC	IT391	Data Structure Lab	0	0	3	3	1.5
7	PC	IT392	Analog and Digital Electronics Lab	0	0	3	3	1.5
8	BS	PH391	Physics-II Lab	0	0	3	3	1.5
9	ES	M(IT)392	Numerical Methods and Statistics Lab	0	0	3	3	1.5
10	PROJ	PR391	Project-III	0	0	2	2	1
11	PROJ*	PR392	Innovative Activities-II	0	0	0	1	0.5
C. MANDATORY ACTIVITIES / COURSES								
12	MC	MC381	Behavioural and Interpersonal Skills	0	0	3	3	
Total of Theory, Practical & Mandatory Activities/Courses							34	23.5

*Students may choose either to work on participation in all the activities of Institute's Innovation Council for eg: IPR workshop/ Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos etc.

Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

4 th Semester								
SI No	Course Code	Paper Code	Theory	Contact Hours /Week				Credit Points
				L	T	P	Total	
A. THEORY								
1	PC	IT401	Computer Organization & Architecture	3	0	0	3	3
2	PC	IT402	Object Oriented Programming using Java	3	0	0	3	3
3	PC	IT403	Formal Language and Automata Theory	3	0	0	3	3
4	PC	IT404	Communication Engineering & Coding Theory	3	0	0	3	3
5	HS	HU401	Values & Ethics in Profession	2	0	0	2	2
B. PRACTICAL

7	PC	IT592	Software Engineering Lab	0	0	3	3	1.5
8	PC	IT593	Operating System Lab	0	0	3	3	1.5
9	PE	IT594	A. Programming Practice with C++ Lab	0	0	3	3	1.5
			B. Artificial Intelligence and Expert System					
			C. Microprocessor and Microcontroller Lab					
10	PROJ	PR591	Project-V	0	0	2	2	1
11	PROJ*	PR592	Innovative Activities-IV	0	0	0	0	0.5
C. MANDATORY ACTIVITIES / COURSES								
12	MC	MC501	Constitution of India	3	0	0	3	
Total of Theory, Practical & Mandatory Activities/Courses							31	21.5

* Students may choose either to work on participation in Hackathons etc. Development of new product/ Business Plan/ registration of start-up.

Students may choose to undergo Internship / Innovation / Entrepreneurship related activities. Students may choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with industry/ NGO's/ Government organizations/ Micro/ Small/ Medium enterprises to make themselves ready for the industry/ Long Term goals under rural Internship. (Duration 4-6 weeks)

Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

6 th Semester								
Sl No	Course Code	Paper Code	Theory	Contact Hours /Week				Credit Points
				L	T	P	Total	
A. THEORY

Total of Theory, Practical & Mandatory Activities/Courses							23	15.5

Mandatory Credit Point=160

For Honours Degree additional 20 Credit Point is to be earned (1st Sem to 8th Sem) through MOOCs courses. All the Certificates received by the students across all semester for MOOCs Courses from approved organization (Appendix A) is to be submitted to the Office of the Controller of Examination prior to 8th Semester Examination and the Credit earned through MOOCs courses will be reflected in their Results.

Credit Distribution Ratio:

Category	Credit Allocation As per Autonomy	Credit Allocation As per AICTE
Humanities, Social Sciences & Management Courses	9	12*
Basic Sciences Courses	25.5	25*
Engineering Sciences Courses including Workshop, Drawing, Basics of Electrical/Mechanical/Computer etc	24	24*
Professional Core Courses	52.5	48*
Professional Elective Courses relevant to chosen specialization/Branch	16.5	18*
Open Elective Courses-Electives from other technical and / or emerging subjects	15	18*
Project work, seminar and internship in industry or elsewhere	17.5	15*
Mandatory Courses [Environmental Science, Induction Training, Indian Constitution, Essence of Indian Knowledge Tradition and other Co & extracurricular activities		Non-credited
Total	160	160

* Minor Variation is allowed as per need of the respective disciplines.

A range of credits from 150 to 160 for a student to be eligible to get Undergraduate degree in Engineering.

Subject Distribution in Different Category:**A. Humanities, Social Sciences & Management Courses (HS)**

Sl No	Paper Code	Theory	Contact Hours /Week				Credit Points
			L	T	P	Total	
1	HU101	English	2	0	0	2	2
2	HU291	Language Lab	0	0	2	2	1
3	HU401	Values & Ethics in Profession	2	0	0	2	2
4	HU503	Industrial & Financial Management	2	0	0	2	2
5	HU804	Principles of Management	2	0	0	2	2
		Total Credit:					9

B. Basic Sciences Courses (BS)

1	M101	Mathematics -I	3	1	0	4	4
2	CH101/ PH101	Chemistry (Gr. A) / Physics- I (Gr. B)	3	0	0	3	3
3	CH 191/ PH191	Chemistry Lab (Gr. A) / Physics- I Lab (Gr. B)	0	0	3	3	1.5
4	M201	Mathematics -II	3	1	0	4	4

9	ME291/ ME292	Engineering Graphics & Design (Gr B) / Workshop/Manufacturing Practice (Gr-A)	0	0	3	3	1.5
10	M(IT)302	Numerical Methods and Statistics	3	0	0	3	3
11	M(IT)392	Numerical Methods and Statistics Lab	0	0	3	3	1.5
		Total Credit:					24

D. Professional Core Courses (PC)

1	IT301	Data Structure and Algorithm	3	0	0	3	3
2	IT302	Analog and Digital Electronics	3	0	0	3	3
3	IT391	Data Structure Lab	0	0	3	3	1.5
4	IT392	Analog and Digital Electronics Lab	0	0	3	3	1.5
5	IT401	Computer Organization & Architecture	3	0	0	3	3

6	IT402	Object Oriented Programming using Java	3	0	0	3	3
7	IT403	Formal Language and Automata Theory	3	0	0	3	3
8	IT404	Communication Engineering & Coding Theory	3	0	0	3	3
9	IT491	Computer Organization & Architecture Lab	0	0	3	3	1.5
10	IT492	Object Oriented Programming Lab	0	0	3	3	1.5
11	IT493	Programming Skill Development Lab	0	0	3	3	1.5
12	IT501	Design & Analysis of Algorithm	3	0	0	3	3
13	IT502	Software Engineering	3	0	0	3	3
14	IT503	Operating System	3	0	0	3	3
15	IT591	Algorithm Lab	0	0	3	3	1.5
16	IT592	Software Engineering Lab	0	0	3	3	1.5
17	IT593	Operating System Lab	0	0	3	3	1.5
18	IT601	Database Management System	3	0	0	3	3
19	IT602	Web Technology	3	0	0	3	3
20	IT603	Computer Networking	3	0	0	3	3
21	IT691	Database System Lab	0	0	3	3	1.5
22	IT692	Web Technology Lab	0	0	3	3	1.5
23	IT693	Computer Networking Lab	0	0	3	3	1.5
		Total Credit:					52.5

E. Professional Elective Courses relevant to chosen specialization/Branch (PE)

1	IT504	A. Programming practice with C++	3	0	0	3	3
		B. Artificial Intelligence					
		C. Microprocessor and Microcontroller					
2	IT594	A. Programming practice with C++ Lab	0	0	3	3	1.5
		B. Artificial Intelligence Lab					
		C. Microprocessor and Microcontroller Lab					
3	IT604	A. E-Commerce and ERP	3	0	0	3	3
		B. Digital Image Processing					
		C. Soft Computing					
4	IT694	A. E-Commerce and ERP Lab	0	0	3	3	1.5
		B. Digital Image Processing Lab					
		C. Soft Computing Lab					
5	IT701	A. Cloud Computing	3	0	0	3	3
		B. Computer Graphics and Multimedia					
		C. Distributed System					
		D. Machine Learning					
6	IT702	A. Cryptography and Network Security	3	0	0	3	3
		B. Data Warehousing and Data Mining					
		C. Advanced Computer Architecture					
		D. Compiler Design					
8	IT791	A. Cloud Computing Lab	0	0	3	3	1.5
		B. Computer Graphics and Multimedia Lab					
		C. Distributed System Lab					
		D. Machine Learning using R Programming Lab					
		Total Credit:					16.5

F. Open Elective Courses-Electives from other technical and / or emerging subjects (OE):

1	IT703	A. Sensor Network	3	0	0	3	3
		B. Pattern Recognition					
		C. Internet Technology					
		D. Robotics					
2	IT704	A. Modeling and Simulation	3	0	0	3	3
		B. Microelectronics and VLSI Design					
		C. Mobile Communication					
		D. Operations Research					
3	IT 801	A. Block Chain Technology	3	0	0	3	3
		B. Big Data Analytics					
		C. Virtual Reality					
		D. Natural Language Processing					
4	IT 802	A. Bioinformatics	3	0	0	3	3
		B. Embedded System					
		C. Internet of Things (IoT)					
		D. Deep Learning					
5	IT 803	A. Data Sciences	3	0	0	3	3
		B. Cyber Law and IPR					
		C. Cluster and Grid Computing					
		D. Entrepreneurship Development					
		Total Credit:					15

G. Project work, seminar and internship in industry or elsewhere (PW)

1	PR 191	Project-IA	0	0	1	1	0.5
2	PR 192	Project-IB	0	0	1	1	0.5
3	PR 291	Project-II	0	0	1	1	0.5
4	PR 292	Innovative activities I	0	0	0	0	0.5
5	PR 391	Project-III	0	0	2	2	1
6	PR 392	Innovative activities-II	0	0	0	1	0.5
7	PR 491	Project-IV	0	0	1	1	1
8	PR 492	Innovative activities-III	0	0	0	0	0.5
9	PR 591	Project-V	0	0	2	2	1

For Honours Degree additional 20 Credit Point is to be earned (1st Sem to 8th Sem) through MOOCs courses. All the Certificates received by the students across all semester for MOOCs Courses from approved organization (Appendix A) is to be submitted to the Office of the Controller of Examination prior to 8th Semester Examination and the Credit earned through MOOCs courses will be reflected in their Results.

The distribution of the credit with respect to weeks are as follows:

- 4 to 7 weeks: 2 Credit
- 8 to 11 weeks: 3 Credits
- 12 to 15 weeks: 4 Credits
- 16 or more than that: 6 Credits

Additional 20 credit for Honours should be earned by the students from the MOOC Basket and any other subjects related to the specific program of the respective departments.

MOOCs Basket for Information Technology

Sl No	MOOCs Courses
1	Analog Electronic Circuits
2	Digital Electronics
3	Programming Data Structures and Algorithms Using Python
4	Data Structure
5	Numerical Methods
6	Automata Theory
7	Computer Organization and Architecture: A Pedagogical Aspect

22.	Member of Professional Society	10	20
23.	Student Chapter	10	20
24.	Relevant Industry Visit & Report	10	20
25.	Photography activities in different Club (Photography club, Music Club, etc.)	5	10
26.	Participation in Yoga Camp (Certificate to be submitted)	5	10
27.	Self-Entrepreneurship Programme	20	20
28.	Adventure Sports with Certification	10	20
29.	Training to under privileged/Physically challenged	15	30
30.	Community Service & Allied Activities	10	20

Department: Information Technology
LIST OF MOOCS COURSES FOR MAR

MOOCs Equivalent(Theory)	Minimum Duration	Suggested MAR Point
Ethics in Engineering Practice	8weeks	16
Environmental Studies: A Global Perspective	6weeks	12
Introduction To Biology: The Secret of Life	12weeks	20
Engineering Econometrics	12weeks	20
Management in Engineering	8weeks	16
Human Resource Development	12 weeks	20
Organizational Behaviour	7 weeks	16
Project Management for Managers	12weeks	20
International Cyber Conflicts	5weeks	10
Fundamentals of Digital Marketing, Social Media, and E-Commerce	6weeks	12
Developing Soft Skills and Personality	8 weeks	16
History of English Language and Literature	12 weeks	20
Interpersonal Skills	8 weeks	16
Soft skills	12 weeks	20
Technical English for engineers	8 weeks	16
Better Spoken English	12 weeks	20
Business English Communication	4 weeks	8
Calculus of One Real Variable	8 weeks	16
Educational leadership	8 weeks	16
Economics of IPR	4 weeks	8

Enhancing Soft Skills and Personality	8 weeks	16
Human Resource Development	12 weeks	20
Indian Philosophy	12 weeks	20
Intellectual Property	12 weeks	20
Introduction on Intellectual Property to Engineers and Technologists	8 weeks	16
Literature, Culture and Media	12 weeks	20
Science, Technology and Society	12 weeks	20
Soft Skill Development	8 weeks	16
Speaking Effectively	8 weeks	16
Strategic Performance Management	8 weeks	16
Water, Society and Sustainability	4 weeks	8
Calculus of Several Real Variables	8 weeks	16
Higher Engineering Mathematics	12 weeks	20
Introduction to Abstract and Linear Algebra	8 weeks	16

Note: This is a basic guideline for MAR point. More courses can be taken in consultation with the Department.

Course Name: Mathematics-I

Course Code: M 101

Contact: 3:1:0

Total Contact Hours: 48

Credits: 4

Prerequisites:

The students to whom this course will be offered must have the concept of (10+2) standard matrix algebra and calculus.

Course Objectives:

The objective of this course is to disseminate the prospective engineers with techniques in matrix algebra and calculus. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

Course Outcomes:

After completion of this course student will be able to

CO1:	Recall the distinctive characteristics of Matrix Algebra, Calculus of Single and Several Variables and Vector Analysis.
CO2:	Understand the theoretical concept of Matrix Algebra, Calculus of Single and Several Variables and Vector Analysis.
CO3:	Apply the principles of Matrix Algebra, Calculus of Single and Several Variables and Vector Analysis to solve various problems.

Course Content:

Module I: Matrix Algebra [11]

Echelon form and Normal (Canonical) form of a matrix; Inverse and rank of a matrix; Consistency and inconsistency of system of linear equations, Solution of system of linear equations; Eigenvalues and eigenvectors; Diagonalization of matrices; Cayley-Hamilton theorem.

Module II: Differential Calculus and Infinite Series [10]

Rolle's Theorem, Mean value theorems, Taylor's and Maclaurin theorems with remainders; Concept of sequence and series, Tests for convergence of infinite series: Comparison test, D'Alembert's ratio test, Raabe's test, Cauchy's root test, Power series; Taylor's series, Series for exponential, trigonometric and logarithm functions.

Module III: Multivariable Calculus (Differentiation) - I [9]

Function of several variables, Concept of limit, continuity and differentiability; Partial derivatives, Total derivative and its application; Chain rules, Derivatives of implicit functions Euler's theorem on homogeneous function, Jacobian.

Module IV: Multivariable Calculus (Differentiation) - II [7]

Maxima and minima of functions of two variables, Method of Lagrange multipliers; Directional derivatives, Gradient, Divergence, Curl.

Module V: Integral Calculus [11]

Evolutes and involutes; Evaluation of definite integrals and its applications to evaluate surface areas and volumes of revolutions; Improper integrals; Beta and Gamma functions and their properties.

Course Name: Physics –I

Course Code: PH 101

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Knowledge of Physics up to 12th standard.

Course Objective:

The aim of courses in Physics is to provide an adequate exposure and develop insight about the basic physics principles along with the possible applications. The acquaintance of basic principles of physics would help engineers to understand the tools and techniques used in the industry and provide the necessary foundations for inculcating innovative approaches. It can also create awareness of the vital role played by science and engineering in the development of new technologies. It also gives necessary exposure to the practical aspects, which is an essential component for learning sciences.

Course Outcomes:

After completion of this course student will be able to:

CO1:	Describe various types mechanical resonance and its electrical equivalence
CO2:	Explain basic principles of Laser, Optical fibers and various types of semiconductors
CO3:	Apply superposition to explain interference and diffraction as well as apply wave mechanics to attainment of Heisenberg's uncertainty principle
CO4:	Analyze importance of light as a carrier of information and examine different crystallographic structures according to their co-ordination number and packing factors
CO5:	Justify the need of a quantum mechanics as remedy to overcome limitations imposed by classical physics

Course Content:

Module 1 [6L]:

Waves & Oscillations:

Simple Harmonic Motion (only preliminary idea), damped harmonic motion-over damped, critically damped and under damped motion, energy decay, logarithmic decrement, force vibration and resonance (amplitude, velocity resonance), sharpness of resonance, quality factor, related numerical problems.

Module 2 [8L]:

Classical Optics:

2.01- Interference of light: Huygens's principle, superposition of waves, conditions of sustained interference, Newton's ring (qualitative descriptions of working principles and procedures-no deduction required). Engineering applications, Numerical Problems.

2.02- Diffraction of light: Fresnel and Fraunhofer class, Fraunhofer diffraction of a single slit, multiple slits, intensity distributions, missing order, Rayleigh criterion (no deduction) and resolving

power of grating and microscope (no deduction), related numerical problems.

Module 3 [8L]:

Quantum Mechanics-I:

Quantum Theory: Inadequacy of classical physics and its modifications by Planck's quantum hypothesis-qualitative (no deductions), particle concept of electromagnetic wave (example: photoelectric and Compton Effect; no derivation required, origin of modified and unmodified lines), wave particle duality; phase velocity and group velocity; de Broglie hypothesis; Davisson and Germer experiment.

Quantum Mechanics 1: Concept of wave function, physical significance of wave function, probability interpretation; normalization of wave functions; uncertainty principle, relevant numerical problems.

Module 4 [7L]:

Solid State Physics-I:

Crystal Structure: Structure of solids, amorphous and crystalline solids (definition and examples), lattice, basis, unit cell, Fundamental types of lattices –Bravais lattice, simple cubic, fcc and bcc lattices, Miller indices and miller planes, co-ordination number and atomic packing factor, Bragg's equation, applications, numerical problems.

Semiconductor: Physics of semiconductors, electrons and holes, metal, insulator and semiconductor, intrinsic and extrinsic semiconductor, p-n junction.

Module 5 [7L]:

Modern Optics-I:

5.01- Laser: Concepts of various emission and absorption process, Einstein A and B coefficients and equations, working principle of laser, metastable state, population inversion, condition necessary for active laser action, optical resonator, illustrations of Ruby laser, He-Ne laser, Semiconductor laser, applications of laser.

5.02-Fibre optics: Principle and propagation of light in optical fibres- Numerical aperture and Acceptance angle, Numerical problems.

Text Books:

Waves & Oscillations:

Course Name: Basic Electronics Engineering

Course Code: EC101

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Electric current and voltage-D.C and A.C., Complex impedance, conductivity, resistivity, transformer charging and discharging of capacitor, active and passive elements.

Course Objective:

To understand the behavior of Conductors, Insulators, and Semiconductors based on energy- band theory and relevant problems, instill the knowledge of working principles of P-N Junction Diode, Zener diode and analyze their applications in the rectifier, clipper, clamper, regulator etc, familiarize with the characteristics of Bipolar junction transistor(BJT) under CE, CE,CC mode of operation and its biasing mechanisms, understand working principles of JFET, MOSFET and perform operations under CG, CS, CD configurations for parametric observation, determine the parameters due to the effect of feedback in amplifier to ,adder circuit ,integrator and differentiator circuit using Operational Amplifier

Course Outcomes:

After completion of this course student will be able to

CO1:	Demonstrate the concept of PN junction diode, ideal diode, special diodes, working of diode models and its application in circuit analysis.
CO2:	Apply operational amplifiers, and design Op-Amp circuits to perform operations such as integration, differentiation, inversion, addition, subtraction on electronic signals.
CO3:	Analyze the concepts of both positive and negative feedback in electronic circuits.
CO4:	Evaluate the electrical quantities of various component connected in a circuit for specific applications.
CO5:	Develop the capability to analyse and design simple circuits containing non-linear elements such as transistors using the concepts of load lines, operating points and incremental analysis.

Course Content:

Module-I: Basics of semiconductor [6L]

Conductors, Insulators, and Semiconductors- crystal structure, Fermi Dirac function, Fermi level, Energy band diagrams, valence band, conduction band, and band gap; intrinsic, and extrinsic (p-type and n-type) semiconductors, position of Fermi level in intrinsic and extrinsic semiconductor, drift and diffusion current – expression only (no derivation), mass action law, charge neutrality in semiconductor, Einstein relationship in semiconductor, Numerical problems.

Module-II: P-N Junction Diode and its applications [8L]

p-n junction formation and depletion region, energy band diagram of p-n junction at equilibrium and barrier energy, built in potential at p-n junction, energy band diagram and current through p-n junction at forward and reverse bias, Static and Dynamic resistance of Diode, Transition capacitance and diffusion capacitance, V-I characteristics and current expression of diode, temperature dependencies of

V-I characteristics of diode, p-n junction breakdown – conditions, avalanche and Zener breakdown, Concept of Junction capacitance, Zener diode and characteristics.

Diode half wave and full wave rectifiers (centre tapped and bridge) circuits and operation (I_{DC} , I_{rms} , V_{DC} , V_{rms}), ripple factor without filter, efficiency, PIV, TUF; Reduction of ac ripples using filter circuit (Qualitative analysis); Design of diode clipper and clamper circuit - explanation with example, application of Zener diode in regulator circuit. Numerical problems.

Module-III: Bipolar junction transistor [6L]

Concept of -Transistor, Formation of PNP/NPN Transistors, energy band diagram, current conduction mechanism, CE, CB, CC configurations, transistor static characteristics in CE, CB and CC mode, junction biasing condition for active, saturation and cut-off modes, current gain α , β and γ , early effect. Biasing and bias stability; biasing circuits - fixed bias; voltage divider bias; collector to base bias, D.C. load line and Quiescent point, calculation of stability factors for different biasing circuits. BJT as an amplifier and as a switch – Graphical analysis; Numerical Problems.

Module-IV: Field effect transistor [6L]

Concept of -field effect, Classification of FETs-JFET, MOSFET, operating principle of JFET. Drain and transfer characteristics of JFET (n-channel and p-channel), CS, CG, CD configurations, Relation between JFET parameters. FET as an amplifier and as a switch– graphical analysis. E-MOSFET (n- channel and p-channel), D-MOSFET (n-channel and p-channel), Numerical Problems.

Module-V: Feedback and Operational Amplifier [(8L)]

Concept of feedback with block diagram, positive and negative feedback, gain with feedback. Feedback topologies, effect of feedback on input and output impedance, distortion, concept of oscillation and Barkhausen criterion. Operational amplifier – electrical equivalent circuit, ideal characteristics, non-ideal characteristics of op-amp – offset voltages; bias current; offset current; Slew rate; CMRR and bandwidth, Configuration of inverting and non-inverting amplifier using Op-amp, closed loop voltage gain of inverting and non- inverting amplifier, Concept of virtual ground, Applications op-amp – summing amplifier; differential amplifier; voltage follower; basic differentiator and integrator, Numerical Problems.

Module-VI: Cathode Ray Oscilloscope [2L]

Operating principle of CRO with block diagram, measurement of voltage, frequency and phase.

Course Name: English

Course Code: HU101

Contact: 2:0:0

Total Contact Hours: 24

Credits: 2

Prerequisites:

The course presupposes a high school level knowledge of English grammar, punctuation, and elementary to intermediate reading and writing skills.

Course Objectives:

The basic objectives of this course are to impart professional communication skills in the globalized workplace context, to enable functional competence in reading and writing so as to create industry-ready personnel.

Course Outcomes:

After completion of this course student will be able to

CO1:	Comprehend and communicate in English through exposure to communication skills theory and practice.
CO2:	Apply the basic grammatical skills of the English language through intensive practice.
CO3:	Apply/illustrate all sets of English language and communication skills in creative and effective ways in the professional sphere of their life.
CO4:	Develop writing proficiency skills by writing official letters, technical report, memo, notice, minutes, agenda, resume, curriculum vitae.

Course Content:

Module 1: Communication in a Globalized World [4L]

Definition, Process, Types of Communication
Verbal and Non-Verbal Communication
Barriers to Communication
Workplace Communication

Module 2: Functional Grammar [4L]

Articles, Prepositions and Verbs
Verb-Subject Agreement
Voice, Modality and Modifiers
Direct and Indirect Speech
Common Errors in English

Module 3: Vocabulary and Reading [6L]

Word Roots, Prefixes and Suffixes
Antonyms, Synonyms and one word Substitution
Reading—Purposes and Skills (Skimming, Scanning & Intensive Reading)
Reading Comprehension (Fictional and Non-fictional prose)

Module 4: Professional Writing [10L]

Writing Functions: Describing, Defining, Classifying

Structuring—coherence and clarity

Business Writing—Letters (Enquiry, Order, Sales, Complaint, Adjustment, Job Application letters), Memos, Notices, Circulars, Agendas and Minutes of Meetings).

E-mails—types, conventions, jargons and modalities.

Reports and Proposals

Précis writing

Essay writing

Punctuation and its importance in writing

Writing for an Audience

Course Name: Physics I Lab

Course Code: PH 191

Contact: 0:0:3

Credits: 1.5

Pre requisites:

Knowledge of Physics upto 12th standard.

Course Outcomes:

After completion of this course student will be able to

CO1:	Demonstrate experiments allied to their theoretical concepts
CO2:	Conduct experiments using LASER, Optical fiber, Torsional pendulum, Spectrometer
CO3:	Participate as an individual, and as a member or leader in groups in laboratory sessions actively
CO4:	Analyze experimental data from graphical representations, and to effectively communicate them in Laboratory reports including innovative experiments

List of Experiments:

General idea about Measurements and Errors (One Mandatory):

- i) Error estimation using Slide calipers/ Screw-gauge/travelling microscope for one experiment.
- ii) Proportional error calculation using Carrey Foster Bridge.

Any 6 to be performed from the following experiments

Experiments on Waves & Oscillations:

1. Study of Torsional oscillation of Torsional pendulum & determination of time period using various load of the oscillator.
2. Determination of elastic moduli of different materials (Young's modulus /Rigidity modulus)

Experiments on Classical Optics:

3. Determination of wavelength of light by Newton's ring method.
4. Determination of wavelength of light by Laser diffraction method.

Experiments on Quantum Physics-I:

5. Determination of Planck's constant using photoelectric cell.
6. Verification of Bohr's atomic orbital theory through Frank-Hertz experiment.
7. Determination of Stefan's Constant

Experiments on Solid State Physics-I:

8. Determination of Band gap of a semiconductor

****In addition it is recommended that each student should carry out at least one experiment beyond the syllabus/one experiment as Innovative experiment.**

Probable experiments beyond the syllabus:

1. Determination of wavelength of light by Fresnel's bi-prism method (beyond the syllabus).
3. Study of dispersive power of material of a prism.
4. Study of viscosity using Poiseuille's capillary flow method/using Stoke's law.
5. Measurement of nodal and antinodal points along transmission wire and measurement of wave length.
6. Any other experiment related to the theory.

Course Name: Basic Electronics Engineering Lab**Course Code: EC 191****Contact: 0:0:3****Credit: 1.5****Prerequisites:**

A basic course in electronics and Communication engineering Progresses from the fundamentals of electricity, active and passive components, basic electronics laws like Ohm's law, Ampere's law.

Course Objective:

The objectives of this course are to prepare the students to have a basic knowledge of active and passive components, build knowledge to distinguish pure and impure DC signals, grow measuring ability of signals through multi meter and CRO, understand characteristics of proper biasing for BJT and FET, encourage in developing circuits using diodes, transistors, FETs and OPAMPs.

Course Outcomes:

After completion of this course student will be able to

CO1:	Determination of input-offset voltage, input bias current and Slew rate, Common- mode Rejection ratio, Bandwidth and Off-set null of OPAMPs.
CO2:	Apply Diode, BJT & OPAMP in specific circuit design.
CO3:	Analyze Electronic components such as Resistors, Capacitors, Diodes, Transistors measuring equipment like DC power supply, Multimeter, CRO, Signal generator, DC power supply.
CO4:	Compare the characteristics of Junction Diode, Zener Diode, BJT & FET and different types of Rectifier Circuits.
CO5:	Evaluate electrical quantities for analytical and graphical representations.

List of Experiments:

1. Familiarization with passive and active electronic components such as Resistors, Inductors, Capacitors, Diodes, Transistors (BJT) and electronic equipment like DC power supplies, millimeters etc.
2. Familiarization with measuring and testing equipment like CRO, Signal generators etc.
3. Study of I-V characteristics of Junction diodes.
4. Study of I-V characteristics of Zener diodes.
5. Study of Half and Full wave rectifiers with Regulation and Ripple factors.
6. Study of I-V characteristics of BJTs.
7. Study of I-V characteristics of Field Effect Transistors.
8. Determination of input-offset voltage, input bias current and Slew rate of OPAMPs.
9. Determination of Common-mode Rejection ratio, Bandwidth and Off-set null of OPAMPs.
10. Study of OPAMP circuits: Inverting and Non-inverting amplifiers, Adders, Integrators and Differentiators.
11. Study of Logic Gates and realization of Boolean functions using Logic Gates.
12. Study of Characteristic curves for CB, CE and CC mode transistors.
13. Innovative Experiment

Course Name: Workshop/Manufacturing Practices Course**Code: ME 192****Contact: 0:0:3****Credit: 1.5****Prerequisite:**

Higher Secondary with Mathematics, Physics and Chemistry

Course Objectives:

To understand the basic knowledge of Workshop Practice and safety, identify and use of different hand tools and other instruments like Hack Saw, Jack lane, Chisels etc. and operations like marking, Cutting etc., expose students to different types of manufacturing/fabrication processes

Course Outcomes:

After completion of this course student will be able to

CO1:	Gain basic knowledge of Workshop Practice and Safety useful for our daily living
CO2:	Identify Instruments of a pattern shop like Hand Saw, Jack Plain, Chisels etc and performing operations like such as Marking, Cutting etc used in manufacturing processes.
CO3:	Gain knowledge of the various operations in the Fitting Shop using Hack Saw, various files, Scriber, etc to understand the concept of tolerances applicable in all kind of manufacturing
CO4:	Get hands on practice of in Welding and various machining processes which give a lot of confidence to manufacture physical prototypes in project works.

Course Content:**Theoretical discussion & videos:**

Detailed contents:

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods
 2. Fitting operations & power tools
 3. Carpentry
 4. Welding (arc welding & gas welding), brazing
 5. Electrical & Electronics
 6. Metal casting
 7. CNC machining, Additive manufacturing
 8. Plastic moulding& Glass Cutting.
- (i) Workshop Practice:

Module 1 - Machine shop

Typical jobs that may be made in this practice module:

- i. To make a pin from a mild steel rod in a lathe.
- ii. To make rectangular and vee slot in a block of cast iron or mild steel in a shaping and / or milling machine.

Module 2 - Fitting shop

Typical jobs that may be made in this practice module:

- i. To make a Gauge from MS plate.

Module 3 – Carpentry

Typical jobs that may be made in this practice module:

- i. To make wooden joints and/or a pattern or like.

Module 4 - Welding shop (Arc welding 3P + gas welding

Typical jobs that may be made in this practice module:

- i. ARC WELDING (3P): To join two thick (approx 5mm) MS plates by manual metal arcwelding.
- ii. GAS WELDING (3P): To join two thin mild steel plates or sheets by gas welding.

Module 5 - Electrical & Electronics

House wiring, soft Soldering

Module 6 – Smithy

Typical jobs that may be made in this practice module:

- i. A simple job of making a square rod from a round bar or like.

For further study (Optional)

Module 7 - Casting

Typical jobs that may be made in this practice module:

- i. One/ two green sand moulds to prepare, and a casting be demonstrated.

Module 8 - Plastic Moulding & Glass Cutting (3)

Typical jobs that may be made in this practice module:

- i. For plastic moulding, making at least one simple plastic component should be made.
- ii. At least one sample shape on glass should be made using laser cutting machine.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

Course Name: Mathematics - II

Course Code: M 201

Contact: 3:1:0

Total Contact Hours: 48

Credit: 4

Prerequisites:

The students to whom this course will be offered must have the concept of (10+2) standard calculus.

Course Objectives:

The objective of this course is to disseminate the prospective engineers with techniques in multivariable calculus, ordinary differential equations and Laplace transform. It aims to equip the students with concepts and tools at an intermediate to advanced level of mathematics and applications that they would find useful in their disciplines.

Course Outcomes:

After completion of this course student will be able to

CO1:	Recall the distinctive characteristics of Ordinary Differential Equations, Graph Theory and Laplace Transform
CO2:	Understand the theoretical workings of various algorithms related to graph theory and the theorems of differential equation and Laplace transforms.
CO3:	Apply the principles of differential equation, graph theory and Laplace transforms to solve various problems.

Course Content:

Module I: Multivariable Calculus (Integration): [12L]

Double integration, Change of order of integration in double integrals, Triple integrals, vector line integrals, scalar surface integrals, vector surface integrals, Green's theorem, Gauss divergence theorem and Stokes' theorem.

Module II: First Order Ordinary Differential Equations: [10L]

Solution of first order and first degree ODE: Exact ODE, Rules for finding Integrating factors, Linear ODE, Bernoulli's equation, Solution of first order and higher degree ODE: Solution of first order and higher degree ODE: solvable for y, solvable for pm solvable for x and Clairaut's equation.

Module III: Second Order Ordinary Differential Equations: [12L]

Solution of second order ODE with constant coefficients: C.F. & P.I., Method of variation of parameters, Cauchy-Euler equations, Reduction of 2nd order ODE to a pair of first order ODEs, Solution of simultaneous linear ODEs.

Module IV: Laplace Transform: [14L]

Definition and existence of LT, LT of elementary functions, First and second shifting properties, Change of scale property, LT of $\{t f(t)\}$, LT of $\{f(t)/t\}$, LT of derivatives of $\{f(t)\}$, LT of $\{f(t)dt\}$, Evaluation of improper integrals using LT, LT of periodic and step functions, Inverse LT:

Definition and its properties, Convolution theorem (statement only) and its application to the evaluation of inverse LT, Solution of linear ODE with constant coefficients (initial value problem) using LT.

Course Name: Chemistry
Course Code: CH201
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Prerequisites:

Knowledge of Chemistry up to 12th standard.

Course Objective:

The concepts developed in this course will aid in quantification of several concepts in chemistry that have been introduced at the 10+2 levels in schools. Technology is being increasingly based on the electronic, atomic and molecular level modifications.

Course Outcomes:

After completion of this course student will be able to

CO1:	Describe the fundamental properties of atoms & molecules, atomic structure and the periodicity of elements in the periodic table
CO2:	Apply fundamental concepts of thermodynamics in different engineering applications.
CO3:	Apply the knowledge of water quality parameters, corrosion control & polymers to different industries.
CO4:	Determine the structure of organic molecules using different spectroscopic techniques.
CO5:	Evaluate theoretical and practical aspects relating to the transfer of the production of chemical products from laboratories to the industrial scale, in accordance with environmental considerations.

Course Content:**Module I: Inorganic Chemistry [9L]****Atomic structure**

Bohr's theory to hydrogen-like atoms and ions; spectrum of hydrogen atom. Quantum numbers, Introduction to the concept of atomic orbitals, diagrams of s, p and d orbitals, Pauli's exclusion principle, Hund's rule, exchange energy, Aufbau principle and its limitation, introduction to Schrodinger equation.

Periodic properties

Modern Periodic table, group trends and periodic trends in physical properties: electron affinity, electronegativity, polarizability, oxidation states, effective nuclear charges, penetration of orbitals, variations of s, p and d orbital energies of atoms.

Module II: Physical Chemistry [8L]**Use of free energy in chemical equilibria**

Thermodynamic functions: internal energy, enthalpy, entropy and free energy. 2nd Law of Thermodynamics, Estimations of entropy and free energies, Free energy and emf, Cell potentials, the Nernst equation and applications.

Real Gases

Reason for deviation of real gases from ideal behavior, Equations of state of real gases, Vander Waals' equation, pressure & volume correction, validity, critical state of gas.

Module III: Organic Chemistry [8L]**Stereochemistry**

Representations of 3 dimensional structures, Chirality, optical activity, isomerism, structural isomerism, stereoisomers, enantiomers, diastereomers, configurations (D,L & cis trans), racemisation.

Organic reactions

Concepts of inductive effect, resonance, hyperconjugation, introduction to reactions involving substitution, addition, elimination, oxidation (Baeyer villiger oxidation), reduction (Clemmensen reduction, Wolff-Kishner reduction)

Module IV: Industrial Chemistry [8L]

Water (2L): Hardness, alkalinity, numerical

Corrosion. (2 L): Types of corrosion: wet & dry, preventive measures

Polymers (3 L): Classification of polymers, conducting polymers, biodegradable polymers

Synthesis of a commonly used drug molecule. (1 L): Paracetamol, Aspirin

Module V: Spectroscopic techniques in Chemistry [3L]

Electromagnetic radiation, Principles of spectroscopy, spectrophotometer, infrared spectroscopy, fingerprint region, functional group region, UV-VIS spectroscopy, ^1H Nuclear magnetic resonance spectroscopy, chemical shift

Text Books

1. A Text Book of Organic Chemistry, Arun Bahl & Arun Bahl
2. General & Inorganic Chemistry, P.K. Dutt
3. General & Inorganic Chemistry, Vol I, R.P. Sarkar

Course Name: Basic Electrical Engineering

Course Code: EE201

Contact: 3:0:0

Total Contact hours: 36

Credits: 3

Prerequisites:

Basic 12th standard Physics and Mathematics, Concept of components of electric circuit.

Course Objective:

To introduce the students to basic principles of DC and AC circuits, Electrical Machines and Electrical Systems.

Course Outcomes:

After completion of this course student will be able to

CO1:	Understand Basic Electrical circuits, Power distribution and Safety measures.
CO2:	Apply basic engineering knowledge to understand basics terms used in electrical ac circuits, study RLC circuits with phasor diagrams, determine impedance and admittance, power factor and power and describe and illustrate RLC resonance phenomena.
CO3:	Apply basic engineering knowledge to understand basics of three phase system and determine the power by two watt meters method
CO4:	Apply basic engineering knowledge to study construction, classification, working principles, performance characteristics of dc machines, transformer and three phase induction motor.
CO5:	Apply basic engineering knowledge to understand basics of power system, earthing of electrical equipment and electrical wiring.

Course contents:

Module I: DC Circuits [9L]

Definition of electric circuit, linear circuit, non-linear circuit, bilateral circuit, unilateral circuit, Dependent source, node, branch, active and passive elements, Kirchhoff's laws, Source equivalence and conversion, Network Theorems - Superposition Theorem, Thevenin's Theorem, Norton Theorem, Maximum Power Transfer Theorem, Star-Delta Conversions.

Module II: AC Fundamentals [9L]

Sinusoidal quantities, Average and RMS values, peak factor, Form factor, Phase and Phase difference, concept of phasor diagram, V-I Relationship in R, L, C circuit, Combination R-L-C in series and parallel circuits with phasor diagrams, impedance and admittance, impedance triangle and power triangle, Power factor, concept of resonance, Power in AC circuit, simple problems (series and parallel circuit only), Three-phase balanced circuits, Concept of three-phase power measurement.

Module III: Single-Phase Transformer [5L]

Brief idea on constructional parts, classifications, working principle. Problems on EMF equation.

Phasordiagram, Equivalent circuit.

Module IV: Electrical Rotating Machines [8L]

DC Machines

Brief idea on constructional features, classifications, working principle of both motor and generator. Simple problems on Voltage equation.

Three-Phase Induction Motor

Basic concept of three phase circuit and production of rotating magnetic field. Working principle of three-phase induction motor and torque-speed characteristics (concept only). No numerical problem.

Module V: General Structure of Electrical Power System [1L]

Power generation to distribution through overhead lines and underground cables with single line diagram.

Module VI: Electrical Installations [4L]

Earthing of Electrical Equipment, ideas of basic components- MCB, MCCB, ELCB, SFU, Megger.

Text books:

Course Name: Programming for Problem Solving

Course Code: CS 201

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Number system, Boolean Algebra

Course Objective:

To introduce the students to knowledge of programming language to solve the problems.

Course Outcomes:

After completion of this course student will be able to

CO1:	Understand and differentiate among different programming languages for problem solving.
CO2:	Describe the way of execution and debug programs in C language.
CO3:	Define, select, and compare data types, loops, functions to solve mathematical and scientific problem.
CO4:	Understand the dynamic behavior of memory by the use of pointers.
CO5:	Design and develop modular programs using control structure, selection structure and file.

Course Content:

Fundamentals of Computer: [8L]

History of Computer, Generation of Computer, Classification of Computers, Basic structure of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices.

Binary and Allied number systems representation of signed & unsigned numbers, BCD, ASCII, Binary number. Arithmetic – Addition and Subtraction (using 1's complement and 2's complement). Overview of Procedural vs Structural language, compiler and assembler (basic concepts). Problem solving- Algorithm & flow chart.

C-Fundamentals:

Variable and Data Types:[2L]

The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements.

Operators & Expressions: [3L]

Arithmetic operators, relational operators, logical operators, increment and decrement operators, bitwise operators, assignment operators, conditional operators, special operators - type conversion, C expressions, precedence and associativity. Input and Output: Standard input and output, formatted output - printf, formatted input scanf, bit fields.

Branching and Loop Statements: [3L]

Statement and blocks, if - else, switch, goto and labels, Loops - while, for, do while, break and continue.

Fundamentals and Program Structures: [4L]

auto, external, static and register variables Functions, function types, function prototypes, functions returning values, functions not returning values, scope rules, recursion, C preprocessor and macro.

Arrays, Strings and Pointers: [10L]

One dimensional arrays, Two-dimensional arrays, Multidimensional arrays. Passing an array to a function Character array and string, array of strings, Passing a string to a function, String related functions, Pointers, Pointer and Array, Pointer and String, Pointer and functions, Dynamic memory allocation.

Structures and Unions: [3L]

Basic of structures, arrays of structures, structures and pointers, structures and functions.

Files handling with C: [3L]

Formatted and unformatted files, Command line arguments, fopen, fclose, fgetc, fputc, fprintf, fscanf function.

Course Name: Engineering Mechanics

Course Code: ME 201

Contacts: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Basic Concept of Physics

Course Objective:

This course teaches students how to apply Newtonian physics to relatively simple real life applications. This course covers statics, dynamics and elementary part of strength of materials.

Course Outcomes:

After completion of this course student will be able to

CO1:	Know about thermodynamic equilibrium, heat & work transfer, First law and its application.
CO2:	Understand the basic concepts of Heat Engine, Entropy from Second law of thermodynamics.
CO3:	Apply the thermodynamic characteristics of a pure substance in power cycles.
CO4:	Know the basic principles of fluid mechanics and analyze fluid flow problems applying momentum and energy equations.

Course Content:

Module 1: Introduction to Engineering Mechanics: [6L]

Force Systems Basic concepts, Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant- Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams, Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static Indeterminacy.

Module 2: Friction: [2L]

Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, wedge friction, screw jack & differential screw jack.

Module 3: Basic Structural Analysis: [3L]

Equilibrium in three dimensions; Method of Sections; Method of Joints; How to determine if a member is in tension or compression; Simple Trusses; Zero force members; Beams & types of beams; Frames & Machines.

Module 4: Centroid and Centre of Gravity: [5L]

Centroid of simple figures from first principle, centroid of composite sections; Centre of Gravity and its implications; Area moment of inertia- Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook.

Module 5: Virtual Work and Energy Method: [5L]

Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium. Stability of equilibrium.

Module 6: Review of particle dynamics: [5L]

Rectilinear motion; Plane curvilinear motion (rectangular, path, and polar coordinates). 3-D curvilinear motion; Relative and constrained motion; Newton's 2nd law (rectangular, path, and polar coordinates). Work-kinetic energy, power, potential energy. Impulse- momentum (linear, angular); Impact (Direct and oblique).

Module 7: Introduction to Kinetics of Rigid Bodies: [5L]

Basic terms, general principles in dynamics; Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D'Alembert's principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid body rotation.

Module8: Mechanical Vibrations: [5L]

Basic terminology, free and forced vibrations, resonance and its effects; Degree of freedom; Derivation for frequency and amplitude of free vibrations without damping and single degree of freedom system, simple problems, types of pendulum, use of simple, compound and torsion pendulums.

Course Name: Programming for Problem Solving Lab

Course Code: CS291

Contacts: 0:0:3

Credits: 1.5

Prerequisites:

Number system, Boolean Algebra.

Course Outcomes:

After completion of this course student will be able to

CO1:	Apply the conception of data type, variable declaration to solve the problem.
CO2:	Analyze the conception of data handling to solving problem and identify and correct syntax errors / logical errors as reported during compilation time and run time.
CO3:	Create program using Arrays, Pointers, Structures, Union and Files. for solving different problem both recursive and non recursive method

List of Experiment:

- Some basic commands of DOS, Windows and Linux Operating System, File handling and Directory structures, file permissions, creating and editing simple C program, compilation and execution of C program.
- Writing C Programs on variable, expression, operator and type-casting.
- Writing C Programs using different structures of if-else statement and switch-case statement.
- Writing C Programs demonstrating use of loop (for loop, while loop and do-while loop) concept and use of break and continue statement.
- Writing C Programs demonstrating concept of Single & Multidimensional arrays.
- Writing C Programs demonstrating concept of Function and Recursion.
- Writing C Programs demonstrating concept of Pointers, address of operator, declaring pointers and operations on pointers.
- Writing C Programs demonstrating concept of structures, union and pointer to structure.
- Writing C Programs demonstrating concept of String and command line arguments.
- Writing C Programs demonstrating concept of dynamic memory allocation.
- Writing C Programs demonstrating concept of File Programming.
- Any other problem solving

Course Name: Chemistry Lab

Course Code: CH 291

Contact: 0:0:3

Credits: 1.5

Prerequisites:

Knowledge of Physics up to 12th standard.

Course Objective:

Study the basic principles of pH meter and conductivity meter for different applications., analysis of water for its various parameters & its significance in industries, learn to synthesis Polymeric materials and drugs.

Course Outcomes:

After completion of this course student will be able to

CO1:	Able to operate different types of instruments for estimation of small quantities chemicals used in industries and scientific and technical fields.
CO2:	Able to analyse and determine the composition of liquid and solid samples working as an individual and also as an team member
CO3:	Able to analyse different parameters of water considering environmental issues
CO4:	Able to synthesize drug and polymer materials.

List of Experiment:

Choice of 10-12 experiments from the following:

- Determination of surface tension and viscosity
- Thin layer chromatography
- Determination of hardness of water
- Determination of chloride content of water
- Determination of the rate constant of a reaction
- Determination of cell constant and conductometric titration
- pH metric titrations
- Synthesis of a polymer/drug
- Saponification/acid value of an oil
- Chemical analysis of a salt
- Chemical oscillations- Iodine clock reaction
- Determination of the partition coefficient of a substance between two immiscible liquids
- Adsorption of acetic acid by charcoal

Innovative experiments (any one)

- Synthesis of silver nano particles
- Green synthesis

Course Name: Basic Electrical Engineering Laboratory

Course Code: EE291

Contact: 0:0:3

Credits: 1.5

Prerequisites:

Basic Physics and applied physics, Basic Mathematics, Basic concept of Electric Circuit

Course Objective:

To impart and apply knowledge about the Basic Electrical Components, Machineries, Instruments and Safety measures.

Course Outcomes:

After completion of this course student will be able to

CO1:	Identify and use common electrical components.
CO2:	To develop electrical networks by physical connection of various components
CO3:	Apply and analyze the basic characteristics of transformers and electrical machines.

List of Experiments:

1. Basic safety precautions – earthing, introduction to measuring instruments – Voltmeter, Ammeter, Multimeter, Wattmeter, Real life Resistor, Capacitor, Inductor.
2. Verification of Thevenin's and Norton's Theorem.
3. Verification of Superposition and Maximum Power Transfer Theorem.
4. Characteristics of Fluorescent, Tungsten and Carbon filament lamps.
5. Study of R-L-C series circuit.
6. Three-phase Power measurement with two wattmeter method.
7. Demonstration of cut-out sections of machines: DC Machine (commutator-brush arrangement), Induction Machine (squirrel cage rotor).
8. Measurement of primary and secondary voltage and current of single-phase transformer – Open Circuit and Short Circuit Test.
9. Starting, Reversing and speed control of DC shunt motor.
10. Torque-Speed characteristics of DC Machine.
11. Torque-Speed characteristics of Three-phase Induction Motor.
12. Test on single-phase Energy Meter.

Course Name: Engineering Graphics & Design

Course Code: ME 291

Contact: 0:0:3

Credits: 1.5

Prerequisites:

Basic knowledge of geometry

Course Objectives:

To learn detailed drawing and modeling of a system, component, or process which meets desired needs within realistic constraints. It will help students to use the techniques, skills, and modern engineering tools and communicate effectively.

Course Outcomes:

After completion of this course student will be able to

CO1:	Learn basics of drafting and use of drafting tools which develops the fundamental skills of industrial drawings
CO2:	Know about engineering scales, dimensioning and various geometric curves necessary to understand design of machine elements
CO3:	Understand projection of line, surface and solids to create the knowledge base of orthographic and isometric view of structures and machine parts
CO4:	Become familiar with computer aided drafting useful to share the design model to different section of industries as well as for research & development.

List of Drawing:

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Module 1: Introduction to Engineering Drawing

Principles of Engineering Graphics and their significance, Usage of Drawing instruments, lettering, Conic sections including Rectangular Hyperbola (General method only); Cycloid, Epicycloid and Involute; Scales – Plain, Diagonal and Vernier Scales.

Module 2: Orthographic & Isometric Projections

Principles of Orthographic Projections-Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes; Projection of Solids inclined to both the Planes- Auxiliary Views; Isometric Scale, Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

Module 3: Sections and Sectional Views of Right Angular Solids

Drawing sectional views of solids for Prism, Cylinder, Pyramid, Cone and project the true shape of the sectioned surface, Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw sectional orthographic views of objects from industry and dwellings (foundation to slab only)

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modeling; Solid Modeling.

Module 4: Overview of Computer Graphics

Demonstration of CAD software [The Menu System, Toolbars (Standard, Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), Zooming methods, Select and erase objects].

Module 5: CAD Drawing, Customization, Annotations, layering

Set up of drawing page including scale settings, ISO and ANSI standards for dimensioning and tolerancing; Using various methods to draw straight lines, circles, applying dimensions and annotations to drawings; Setting up and use of Layers, Changing line lengths (extend/lengthen); Printing documents; Drawing sectional views of solids and project the true shape of the sectioned surface; Drawing annotation, CAD modeling of parts and assemblies with animation, Parametric and non parametric solid, surface and wireframe modeling, Part editing and two dimensional documentation of models.

Module 6:**Demonstration of a simple team design project**

Illustrating Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids; Meshed topologies for engineering analysis and tool-path generation for component manufacture, Use of solid-modeling software for creating associative models at the component and assembly levels.

Course Name: Language Lab and Seminar Presentation

Course Code: HU 291

Contact: 0:0:2

Credit: 1

Prerequisites:

Basic knowledge of LSRW skills.

Course Objective:

To train the students in acquiring interpersonal communication skills by focusing on language skill acquisition techniques and error feedback.

Course Outcomes:

After completion of this course student will be able to

CO1:	Study the taxonomy of listening and speaking skills and sub-skills
CO2:	Understand and apply the knowledge of the basics of note taking of factual data/information in English
CO3:	Able to analyze communication behaviors
CO4:	Identify, analyze in spoken interaction the needs of specific vocabulary, language function and pronunciation in conversations, role plays and group discussions

Course Content:

Module 1: Introduction to the Language Lab

- The Need for a Language Laboratory
- Tasks in the Lab
- Writing a Laboratory Note Book

Module 2: Active Listening

- What is Active Listening?
- Listening Sub-Skills—Predicting, Clarifying, Inferencing, Evaluating, Note-taking
- Academic Listening vs Business Listening
- Listening in Business Telephony
- Study of Contextualized Examples based on Lab Recordings

Module 3: Speaking

- Speaking—Accuracy and Fluency Parameters
- Pronunciation Guide—Basics of Sound Scripting, Stress and Intonation
- Fluency-focussed activities—JAM, Conversational Role Plays, Speaking using Picture/Audio Visual inputs
- Accuracy-focussed activities—Identifying Minimal Pairs, Sound Mazes, Open and Closed Pair Drilling, Student Recordings (using software)
- Group Discussion: Principles and Practice

Module 4: Lab Project Work

- a. Making a brief Animation film with voice over (5 minutes) OR
- b. Making a brief Documentary film (10 minutes)

Course Name: NSS/Physical Activities/ Meditation & Yoga/ Photography/Nature Club

Course Code: MC 281

Contact: 0:0:3

Course Objectives:

To increase student awareness about the weaker and unprivileged sections of society, expose students to environmental issues and ecological concerns, make students self aware about their participatory role in sustaining society and the environment

List of Activities:

- Creating awareness in social issues
- Participating in mass education programmes
- Proposal for local slum area development
- Waste disposal
- Environmental awareness
- Production Oriented Programmes
- Relief & Rehabilitation work during Natural
- Calamities
- Creating awareness in social issues:
 - Women's development – includes health, income-generation, rights awareness.
 - Hospital activities – Eg. writing letters for patients, guiding visitors
 - Old age home – visiting the aging in-mates, arranging for their entertainment.
 - Children's Homes - visiting the young in-mates, arranging for their entertainment
 - Linking with NGOs to work on other social issues. (Eg. Children of sex-workers)
 - Gender issues- Developing an awareness, to link it with Women's Cell of college
- Participating in mass education programmes: 1. Adult education 2. Children's education
 - Proposal for local slum area development : One or two slums to be identified and according to the needs, activities to be developed and proposals and reports are to be submitted.
 - Environmental awareness
 - Resource conservation – Awareness to be developed on water, energy, soil.
 - Preservation of heritage monuments- Marches, poster campaigns
 - Alternative energy consciousness amongst younger school-children.
 - Plantation and beautification- Plantation of trees, their preservation and upkeep, developing NSS parks.
 - Waste disposal- Proper methods of domestic disposal.
 - Production Oriented Programmes
 - Working with people and explaining and teaching improved agricultural practices
 - Rodent control and pest control practices;
 - Soil-testing, soil health care and soil conservation;
 - Assistance in repair of agriculture machinery;
 - Work for the promotion and strengthening of cooperative societies in villages;
 - Assistance and guidance in poultry farming, animal husbandry, care of animal health etc.;
 - Popularization of small savings and Assistance in procuring bank loans
 - Relief & Rehabilitation work during Natural calamities

- Assisting the authorities in distribution of rations, medicine, clothes etc.;
- Assisting the health authorities in inoculation and immunization, supply of medicine etc.;
- Working with the local people in reconstruction of their huts, cleaning of wells, building roads etc.

Course Name: Data Structure and Algorithm**Course Code: IT 301****Contact 3:0:0****Total Contact Hours: 36****Credits: 3****Prerequisite:**

Basic Mathematics, Programming language

Course Objective:

The objective of the course is to provide knowledge of various data structures and algorithms; to introduce difference techniques for analyzing the efficiency of computer algorithms and provide efficient methods for storage, retrieval and accessing data in a systematic manner and explore the world of searching, sorting, traversal and graph tree algorithm along with demonstrate understanding of the abstract properties of various data structures such as stacks, queues, lists and trees.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the concept of large amounts of data efficiently, such as large databases and indexing services.
CO2:	Use some formal design methods and programming languages which emphasize on data structures, as the key organizing factor in software design
CO3:	Analyze different kinds of data structures which are suited to different kinds of applications, and some are highly specialized to specific tasks
CO4:	Create efficient data structures which are a key to designing efficient algorithms

Course Content:**Module I : Introduction : Concepts of data structures [7L]**

a) Data and data structure b) Abstract Data Type and Data Type. Algorithms and programs, basic idea of pseudo-code. Algorithm efficiency and analysis, time and space analysis of algorithms – order notations. Array: Different representations – row major, column major. Sparse matrix - its implementation and usage. Array representation of polynomials. Linked List: Singly linked list, circular linked list, doubly linked list, linked list representation of polynomial and applications.

Module II: Stack and Queue [7L]

Stack and its implementations (using array, using linked list), applications. Queue, circular queue, dequeue. Implementation of queue- both linear and circular (using array, using linked list), applications. Recursion: Principles of recursion – use of stack, differences between recursion and iteration, tail recursion. Applications - The Tower of Hanoi, Eight Queens Puzzle.

Module III: Trees [12L]

Basic terminologies, forest, tree representation (using array, using linked list). Binary trees - binary

tree traversal (pre-, in-, post- order), threaded binary tree (left, right, full) - non-recursive traversal algorithms using threaded binary tree, expression tree. Binary search tree- operations (creation, insertion, deletion, searching). Height balanced binary tree – AVL tree (insertion, deletion with examples only). B- Trees – operations (insertion, deletion with examples only). Huffman tree. Graphs : Graph definitions and Graph representations/storage implementations – adjacency matrix, adjacency list, adjacency multi-list. Graph traversal and connectivity – Depth-first search (DFS), Breadth-first search (BFS) – concepts of edges used in DFS and BFS (tree-edge, back-edge, cross-edge, forward-edge), applications. Minimal spanning tree – Prim's algorithm

Module IV: Sorting Algorithm[10L]

Internal sorting and external sorting Bubble sort and its optimizations, insertion sort, shell sort, selection sort, merge sort, quick sort, heap sort (concept of max heap), radix sort. Tree Sort technique. Searching: Sequential search, binary search, interpolation search. Hashing: Hashing functions, collision resolution techniques

Text Books:

1. Data Structures Using C, by Reema Thereja, OXFORD Publications
2. Data Structures and Algorithms Using C by Amitava Nag and Joyti Prakash Singh, VIKASH Publication
3. Data Structures by S. Lipschutz.

Reference Books:

Course Name: Analog and Digital Electronics**Course Code: IT 302****Contact 3:0:0****Total Contact Hours: 36****Credits: 3****Prerequisites:**

Mathematics, Physics, Basic Electronics.

Course Objective:

The objective of the course is to prepare students to perform the analysis and design of various digital and analog electronic circuits.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand basic analog and digital electronics, including semiconductor properties, operational amplifiers, combinational and sequential logic and analog-to-digital digital-to-analog conversion techniques
CO2:	Identify different symbols, working principles of basic Digital electronics circuits for data processing application
CO3:	Analyze the characteristics of basic digital circuits
CO4:	Design analog amplifiers, combinational logic devices and sequential logic devices like counters and registers

Course Content:**Module I : Analog Electronics [10L]**

Recapitulation of P-N diodes, BJT, FET , Feedback and OPAMP ;Power Amplifiers – Class A, B, AB and C - basic concepts, power, efficiency calculation; Phase Shift, Wein Bridge oscillators; Astable & Monostable Multivibrators, 555 Timer and Multivibrators ; Schmitt Trigger circuit.

Module II: Introduction to Number Systems [10L]

Binary, Octal and Hexadecimal representation and their conversions; BCD, ASCII, EBCDIC, Gray codes and their conversions ; Signed binary number representation with 1's and 2's complement methods , Binary arithmetic; Boolean algebra ; Various logic gates; Representation in SOP and POS forms ; Minimization of logic expressions by algebraic method , K-MAP method and Quin Mc-Clusky Method.

Module III: Combinational Circuits [6L]

Adder and Subtractor; Applications and circuits of Encoder, Decoder, Comparator, Multiplexer, De-Multiplexer and Parity Generator and Checker.

Module IV: Sequential Circuits [6L]

Basic Flip-flop & Latch ; SR, JK, D, T and JK Master-slave Flip Flops Registers (SISO,SIPO,PIPO,PISO); Ring counter, Johnson counter ; Basic concept of Synchronous and Asynchronous counters ; Design of synchronous and asynchronous Mod N Counter.

Module V: A/D and D/A conversion techniques: [2L]

Basic concepts of R-2R , A/D and D/A; successive approximation ADC

Module VI: Logic families [2L]

TTL, ECL, MOS and CMOS - basic concept

Text Books:

Course Name: Mathematics - III

Course Code: M (IT) 301

Contact: 3:1:0

Total Contact Hours: 48

Credits: 4

Prerequisite:

The students to whom this course will be offered must have the concept of (10+2) standard set theory, calculus, basic probability.

Course Objectives:

The objective of this course is to disseminate the prospective engineers with the knowledge of Graph Theory and Algebraic structure. It also aims to equip the students with concepts and tools of probability distribution as an intermediate to the advanced level of applications that they would find useful in their disciplines.

Course Outcome:

After completion of this course student will be able to

CO1:	Recall the distinctive characteristics of Basics of Probability and its Distribution, Discrete Mathematics, Algebraic Structures, Linear Algebra and Advanced graph Theory.
CO2:	Understand the theoretical workings of Basics of Probability and its Distribution, Discrete Mathematics, Algebraic Structures, Linear Algebra and Advanced graph Theory to evaluate the various measures and forms in related field.
CO3:	Apply various principles of Basics of Probability and its Distribution, Discrete Mathematics, Algebraic Structures, Linear Algebra and Advanced graph Theory and solve the same.

Course Content:

Module I: Probability Distributions [16L]

Classical and Axiomatic definition of Probability (elementary properties), conditional probability, Baye's theorem and related problems. Random Variable: Discrete and Continuous (definition & examples); Probability Distribution (definition & examples); Probability Mass Function, Probability Density Function and Distribution Function for a single random variable only (definition, properties & related problems); Expectation, Variance and Standard Deviation for a single random variable only (definition, properties & related problems); Binomial Distribution, Poisson Distribution, Binomial Approximation to Poisson Distribution and Normal Distribution (problems only), Mean, Variance and Standard Deviation of Binomial, Poisson and Normal Distribution (problems only).

Module II: Algebraic Structures [14L]

Group and related problems, order of an element and related problems, Lagrange's theorem, Subgroup, Normal subgroup, Cyclic group, Permutation group, Symmetric group (S₃).

Module III: Graph Theory [18L]

Basics of Graph Theory and related theorems and problems; Digraphs; Weighted Graph; Connected and

Disconnected graph; Bipartite Graph; Complement of a Graph; Regular Graph; Complete Graph; Walk, Path, Circuit, Euler Graph; Hamiltonian circuit, Cut Set and Cut Vertices; Adjacency and Incidence Matrices of a graph (digraph); Isomorphism. Basics of Tree and related theorems, Binary Tree, Spanning Tree, Minimal Spanning Tree, Dijkstra's algorithm, Kruskal's Algorithm, Prim's Algorithm. Planar and Dual Graphs, Kuratowski's graphs, Homeomorphic graphs Euler formula for connected planar graph.

CO3	3	2	2	--	--	--	--	--	--	--	--	1

Course Name: Physics II**Course Code: PH 301****Contact: 3:0:0****Total Contact Hours: 36****Credits: 3****Pre-Requisites:**

1st year Basic Physics knowledge

Course Objective:

The Physics-II course will provide the exposure to the physics of materials that are applied in digital circuitry, storage devices; exposure to the physics of quantum logic gate operation and quantum computation; an insight into the science & technology of next generation; foundations of electromagnetic theory and communication systems; concept of fundamental particles and associated applications in semiconductors

Course Outcome:

After completion of this course student will be able to

CO1:	Describe various types quantum mechanical systems, action of storage and display devices, relate laws of static & time of varying electric, magnetic fields and illustrate the importance of nanomaterials in respect of modern quantum computing circuits.
CO2:	Classify and compare fundamental particles based on statistical mechanics, switching from Schrodinger approach to Heisenberg approach while making transition from Classical to Quantum computation, interpret Maxwell's electromagnetic equations.
CO3:	Apply quantum mechanics to explain various microscopic and nanoscopic phenomena and apply laws of static and dynamic electric and magnetic fields to develop electromagnetic theory.
CO4:	Analyze operations of different types of quantum logic gates, examine nature of electron confinement in various nanostructures and their areas of application.
CO5:	Access the need of a quantum computation as a remedy to overcome limitations imposed in Classical Computation, evaluate the importance of statistical mechanics in explaining actions of semiconductor devices.

Course Content:**Module I: Quantum Mechanics-II, Quantum Computation and Communication [12L]****Quantum Mechanics-II**

Formulation of quantum mechanics and Basic postulates; Operator correspondence-Measurements in Quantum Mechanics- Eigen value, Eigen function, superposition principle, orthogonality of wave function, expectation value. Commutator. Time dependent Schrödinger's equation, formulation of time independent Schrödinger's equation by method of separation of variables, Schrödinger's equation as energy eigen value equation, Application of Schrödinger equation – Particle in an infinite square well potential (1-D and 3-D potential well; Discussion on degenerate levels), 1D finite barrier problem and concept of quantum tunnelling (solve only $E < V_0$). Quantum Computation and Communication The idea of n - dimensional vector space, matrix representation of brackets; basis, Hilbert space; Pauli matrices. Idea of qubit and examples of single qubit logic gates- Classical bits, qubit as a two level system; Bloch vector, Pauli gate, Hadamard gate, Phase

shift gate, Quantum circuits related to Quantum gates.

Module II: Statistical Mechanics [6L]:

Basics of Statistical Mechanics:

Concept of energy levels and energy states, phase space, microstates, macrostates and thermodynamic probability, MB, BE, FD, statistics (Qualitative discussions)- physical significance, conception of bosons, fermions, classical limits of quantum statistics, Fermi distribution at zero & non-zero temperature, Concept of Fermi level.

Applications of Statistical Mechanics:

Qualitative study: Fermi level in metals, intrinsic and extrinsic semiconductors (pictorial representations on temperature dependence and doping concentration viz. p type, n-type).

Module III: Storage and display devices [3L]

Different storage and display devices-Magnetic storage materials, Hard disc (examples related to computers compared with semiconductor storage viz. Pendrive), Operation and application of CRT, Liquid crystal display (LCD), LED, Plasma display, Thin film transistor display).

Module IV: Electricity and Magnetism [11L]

Gauss's law in integral form and conversion into differential form, Equation of continuity, Extend to Poisson's & Laplace's equation, Application to parallel plate, spherical and cylindrical capacitors.

Magnetostatics:

Lorentz force (concept in Hall effect-), force on a small current element placed in a magnetic field. Biot-Savart law- non existence of magnetic monopole, Ampere's circuital law, Magnetic vector and scalar potential.

Electro-magnetism & Electromagnetic theory

Faraday's law, Concept of displacement current, Maxwell's field equations with physical significance, wave equation in free space, transverse nature of electromagnetic wave.

Application of Electromagnetic theory in Polarization

Definition, Plane of polarization, Plane of vibration, Malus Law, Fundamental concepts of plane, circular & elliptical polarizations (only qualitative idea) with examples, Brewster's law, Double refraction : Ordinary & Extra ordinary rays, Nicol's prism, Engineering applications in E.M.Theory, Numerical problems

Module V : Physics of Nanomaterial [4L]

Reduction of dimensionality, properties of nanomaterials, Quantum wells (two dimensional), Quantum wires (one dimensional), Quantum dots (zero dimensional); Application of nanomaterials (CNT, grapheme, electronic, environment, medical).

Text Books:

1. Integrated Engineering Physics by Amal Kumar Chakraborty
2. Engineering Physics by [Khan](#) and Panigrahi Publisher: Oxford.

Reference Books:

Module 1

- Advanced Quantum Mechanics-J. J. Sakurai (TMH)

- Quantum Mechanics-Schiff (Addison-Wesley)
- Quantum Computation and Quantum Information(10th Anniversary Edition)-Nielsen & Chuang (Cambridge University Press)
- The physics of quantum information-[Dirk Bouwmeester](#), [Artur K. Ekert](#), [Anton Zeilinger](#) (Springer)
- Quantum Mechanics-Cohen Tanuje.
- Advanced Quantum Mechanics-P.A.M. Dirac

Module 2

- Statistical Mechanics by B.B. Laud Statistical
- Mechanics by Singh and Singh
- Statistical Mechanics by Satyaprakash

Module 3

- Introduction to solid state physics-Kittel (TMH)
- Solid State Physics- Ali Omar (Pearson Education)
- Solid state physics- S. O. Pillai
- Solid State Physics-A. J. Dekker (Prentice-Hall India)
- Materials Science-Raghavan

Module 4

- Electromagnetics-B.B. Laud (TMH)
- Electricity Magnetism-B.Ghosh (Book & Allied Publisher)
- Electricity Magnetism-Chattopadhyay & Rakshit (New Central Book Agency)
- Electricity Magnetism-Fewkes and Yardwood (Oxford University Press)
- Optics-A. K. Ghatak (TMH)
- Optics-B.D. Gupta (Books and Allied Publ)

Module 5

- Nanotechnology-Rakesh Rath (S. Chand Publishers)
- Integrated Electronics-Millman Halkias (TMH)
- Nanotechnology-Rakesh Rath (S. Chand Publishers)
- Nanoscience-H. E. Schaefer (Springer)

Course Name: Numerical Methods and Statistics

Course Code: M(IT)302

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

The students to whom this course will be offered must have the concept of (10+2) standard number system, algebra and calculus.

Course Objectives:

The purpose of this course is to provide basic understanding of the derivation and the use of the numerical methods along with the knowledge of finite precision arithmetic.

Course Outcome:

After completion of this course student will be able to

CO1:	Recall the distinctive principles of numerical analysis and the associated error measures.
CO2:	Apply numerical methods used to obtain approximate solutions to intractable mathematical problems such as interpolation, integration, the solution of linear and nonlinear equations, and the solution of ordinary differential equations.
CO3:	Select appropriate numerical methods to apply to various types of problems in engineering and science in consideration of the mathematical operations involved, accuracy requirements, and available computational resources.
CO4:	Interpret complex statistical findings using the understanding of inferential statistics.

Course Content:

Module I: Error Analysis and Interpolation [8L]

Approximation in Numerical Computation: Truncation and rounding errors, Propagation of errors, Fixed and floating-point arithmetic.

Interpolation: Difference Operators: Forward and Backward, Shift Operator; Newton forward interpolation, Newton backward interpolation, Lagrange's Interpolation.

Module II: Numerical Solution of Linear and Non-linear Equations [8L]

Numerical Solution of a System of Linear Equations: Gauss elimination method, LU Factorization method, Gauss-Seidel iterative method.

Solution of Polynomial and Transcendental Equations: Bisection method, Regula-Falsi, Newton-Raphson method.

Module III: Numerical Integration and Numerical Solution of Differential Equation [6L]

Numerical Integration: Trapezoidal rule, Simpson's 1/3 rule, Expression for corresponding error terms.

Numerical solution of ordinary differential equation: Euler's method, Euler's modified method,

Fourth order Runge-Kutta method.

Module IV: Statistics [14L]

Basic Statistics: Basic statistics, measure of central tendency, mean, median, mode, dispersion, correlation coefficient and regression.

Sampling theory: Random sampling. Statistic and its Sampling distribution. Sampling distribution of sample mean and variance in random sampling from a normal distribution (statement only) and related problems.

Estimation of parameters: Unbiased and consistent estimators. Interval estimation. Maximum likelihood estimation of parameters (Binomial, Poisson). Confidence intervals and related problems

Course Name: Data Structure Lab

Course Code: IT391

Contact: 0:0:3

Credits: 1.5

Perquisites:

Basic Mathematics, Programming language

Course Objective:

To develop the conceptual understanding for solving problems using data structures such as linear lists, stacks, queues, hashing, trees and graphs and writing programs for these solutions.

Course Outcome:

After completion of this course student will be able to

CO1:	Apply the concept of dynamic memory management, data types, basic data structures, and complexity analysis.
CO2:	Analyze the complexity of the different data structure and algorithm
CO3:	Design and implement the appropriate linear and non-linear data structure and algorithm design method for a specified application design

List of Experiment:

1. Experiments should include but not limited to Implementation of array operations:
2. Stack and Queues: adding, deleting, elements circular Queue: Adding& deleting elements
3. Merging Problem:
4. Evaluation of expressions operations on Multiple stacks & queues:
5. Implementation of linked list: inserting, deleting, inverting a linked list
6. Implementation of stacks and queues
7. Using linked lists: Polynomial addition, Polynomial multiplication
8. Sparse Matrices: Multiplication , addition
9. Recursive and Non Recursive traversal Trees
10. Threaded binary tree traversal. AVL tree implementation
11. Application of Trees. Application of sorting and searching algorithms
12. Hash tables implementation: searching, inserting and deleting, searching and sorting techniques.
13. Innovative Experiments

Text Books:

1. Data Structures Using C, by Reema Thereja, OXFORD Publications

Course Name: Analog and Digital Electronics Lab

Course Code: IT392

Contact: 0:0:3

Credits: 1.5

Perquisite:

Basic Mathematics, Programming language

Course Objective:

The objective of the course is to illustrate the different electronic circuit and their application in practice.

Course Outcome:

After completion of this course student will be able to

CO1:	Make use of analog electronic circuit devices such as BJTs and FETs, amplifiers.
CO2:	Examine the characteristics of different basic logic gates and universal gates.
CO3:	Construct different combinational and sequential circuits using basic logic gates.

List of Experiment:

1. Design of an amplifier.
2. Design of a Phase-Shift Oscillator.
3. Design of a Schmitt Trigger using Opamp.
4. Design of a Multivibrator circuit using 555 timer.
5. Design of Half and Full adder and Half and Full Subtractor
6. Construction of simple Decoder & Multiplexer circuits using logic gates
7. Realization of RS / JK / D flip flops using logic gates
8. Design of Shift Register using J-K / D Flip Flop.
9. Realization of Synchronous Up/Down counter.
10. Design of MOD- N Counter (Synchronous and Asynchronous).
11. Study of DAC and ADC.
12. Innovative Experiments

Text Books:

1. 'Digital Circuits and Design', Salivahanan, S. Arivazhagan, Vikas Publishers

Course Name: Physics-II Lab

Course Code: PH391

Contact: 0:0:3

Credits: 1.5

Perquisites:

Knowledge of Physics upto B.Tech Physics-I lab

Course Objective:

The Physics-II Lab course will provide the exposure to the physics of materials that are applied in digital circuitry, storage devices; exposure to the physics of quantum logic gate operation and quantum computation; an insight into the science & technology of next generation; foundations of electromagnetic theory and communication systems; concept of fundamental particles and associated applications in semiconductors

Course Outcome:

After completion of this course student will be able to

CO1:	Demonstrate experiments allied to their theoretical concepts
CO2:	Conduct experiments using semiconductors, dielectric and ferroelectrics
CO3:	Classify various types of magnetic materials
CO4:	Participate as an individual, and as a member or leader in groups in laboratory sessions actively
CO5:	Analyze experimental data from graphical representations, and to effectively communicate them in Laboratory reports including innovative experiments

List of Experiment:

Module I : Electricity Magnetism

- Study of dipolar magnetic field behavior.
- Study of hysteresis curve of a ferromagnetic material using CRO.
- Use of paramagnetic resonance and determination of Lande-g factor using ESR setup.
- Measurement of Curie temperature of the given sample.
- Determination of dielectric constant of given sample (frequency dependent).
- Determination of Hall co-efficient of a semiconductor and measurement of Magneto resistance of a given semiconductor

Module II: Quantum Mechanics-II

- Determination of Stefan's radiation constant.
- To study current-voltage characteristics, load response, areal characteristics and spectral response of photo voltaic solar cells & measurement of maximum workable power.
- Measurement of specific charge of electron using CRT.
- Determination of band gap of a semiconductor.

Module III : Experiments Beyond Syllabus

- Determination of thermal conductivity of a bad conductor by Lees and Chorlton's method.
- Determination of thermal conductivity of a good conductor by Searle's method.
- Study of I-V characteristics of a LED.
- Study of I-V characteristics of a LDR
- Study of transducer property: Determination of the thermo-electric power at a certain temperature of the given thermocouple.
- Innovative Experiments

Course Name: Numerical Methods and Statics

Lab Course Code: M(IT)392

Contact: 0:0:3

Credits: 1.5

Prerequisites:

Any introductory course on programming language (example. C/ MATLAB).

Course Objectives:

The purpose of this course is to provide basic programming skills for solving the problems in numerical methods.

Course Outcome:

After completion of this course student will be able to

CO1:	Apply the programming skills to solve the problems using multiple numerical approaches.
CO2:	Analyze if the results are reasonable, and then interpret and clearly communicate the results.
CO3:	Design different solution procedure to various types of problems in engineering and science in consideration of the mathematical operations.

List of Experiment:

1. Assignments on Newton forward /backward, Lagrange's interpolation.
2. Assignments on numerical integration using Trapezoidal rule, Simpson's 1/3 rule
3. Assignments on numerical solution of a system of linear equations using Gauss elimination, Gauss Jacobi and Gauss-Seidel iterations.
4. Assignments on numerical solution of Algebraic Equation by Bisection method, Regula-Falsi method, Newton-Raphson method.
5. Assignments on ordinary differential equation: Euler's method, Euler's modified method, Runge-Kutta methods.
6. Simple problems as assignment on Measures of Central Tendency- mean, median, mode, Measures of Dispersion- variance, standard deviation. Problems related to engineering field.
7. Innovative Experiments

Implementation of numerical methods on computer through C/C++ and commercial Software Packages: MATLAB / SCILAB / LABVIEW / Mathematica/NAG ([Numerical Algorithms Group](#)/Python).

Course Name: Behavioral & Interpersonal Skills

Course Code: MC381

Contact: 0:0:3

Total Contact Hours: 36

Course Objective:

To train the students in acquiring interpersonal communication skills by focusing on language skill acquisition techniques and error rectification through feedback.

Course Outcome:

After completion of this course student will be able to

CO1:	It will equip the student to handle workplace interpersonal communication in an effective manner.
CO2:	To enable students with strong oral and written interpersonal communicationskills.
CO3:	To prepare students to critically analyze workplace situations and take appropriate decisions.
CO4:	To make students campus ready through proper behavioral and interpersonal grooming.
CO5:	Integration of enhanced skill set to design and frame team based Project Reportand Presentation.

Course Content:

MODULE ONE – INTERPERSONAL COMMUNICATON

1. The skills of Interpersonal Communication.
2. Gender/Culture Neutrality.
3. Rate of Speech, Pausing, Pitch Variation and Tone.
4. Corporate Communication.
5. Branding and Identity.

MODULE TWO- INTERPERSONAL COMMUNICATION BASED ON WORKPLACECOMMUNICATION

6. Workplace Communication.
7. Modes of Communication (Telephone, Conference Call, Team Huddle, Public Relation etc.)
8. Communication with Clients, Customers, Suppliers etc.
9. Organizing/Participating in Business Meeting.
10. Note Taking.
11. Agenda.
12. Minutes.

MODULE THREE – BUSINESS ETIQUETTE AND CORPORATE LIFE

13. Presenting oneself in the Business Environment.

14. Corporate Dressing and Mannerism.
15. Table Etiquette (Corporate Acculturation, Office parties, Client/Customer invitations etc.)
16. E-mail Etiquette.
17. Activity based Case Study.

MODULE FOUR – MOVIE MAKING: CORPORATE BUSINESS MEETING

18. Team based Brainstorming.
19. Process Planning and Developing Plot.
20. People management.
21. Documentation and Scripting.
22. Shooting the Movie: Location and Camera.
23. Post Production and Editing.
24. Movie Review: Feedback and Analysis

*Students may choose either to work on participation in all the activities of Institute's Innovation Council for eg: IPR workshop/ Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/Technical Expos etc. Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

Course Name: Computer Organization & Architecture**Course Code: IT 401****Contact: 3:0:0****Total Contact Hours: 42****Credits: 3****Prerequisites:**

Basic Programming, Basic concept of Digital Electronics.

Course Objectives:

To study the basic organization and architecture of digital computers (CPU, memory, I/O, software), Understanding and utilization of digital computers, design and application of computer systems as foundation for more advanced computer-related studies.

Course Outcome:

At the end of the course students will be able to

CO1:	Describe the structure and functioning of a digital computer, including its overall system architecture, operating system, and digital components.
CO2:	Illustrate the organization of the Control unit, Arithmetic and Logical unit, Memory unit and the I/O unit.
CO3:	Determine different hazards of the computer system and develop identical solutions
CO4:	Analyze the performance of various components of Computer System and Compare the performance of different units of Computer Architecture
CO5:	Judge the quality of something based on its adequacy, value, logic.

Course Content:**Module I [4L]**

Basic Computer Functions and Interconnection Structures, Discussion between computer architecture and organization, Role of Operating System, Quantitative techniques in computer design. Fetch, decode and execute cycle, Concept of operator, operand, registers and storage, Instruction format. Instruction sets and addressing modes.

Module II [8L]

Memory classification, Memory Hierarchy and characteristics; Organization of RAM, Magnetic memory recording formats & methods, Disk & tape units with detailed working principles. Memory Inclusion, Coherence and locality properties; Associative memory organization; Cache memory organizations, Techniques for reducing cache misses; Virtual memory organization, Paging, mapping and management techniques, memory replacement policies.

Module III [10L]

The ALU – ALU organization, Integer representation, Input/output Organization: Introduction to Bus architecture, effect of bus widths, Programmed & Interrupt I/O, DMA. Serial & Parallel Address;

implementation of high speed Address Carry Look Ahead & carry Save Address. Multiplication of signed binary numbers-Booth's algorithm; Divide algorithms Restoring & Non- Restoring; Floating point - IEEE 754 standard; Floating point number arithmetic; Overflow detection, status flags. Flynn's classification –SISD, SIMD, MISD, MIMD architectures.

Module IV [10L]

Timing diagrams; T-States, Controlling arithmetic & logic instruction, control structures; Hardwired & Micro programmed, CISC & RISC characteristics. Pipelining: Basic concepts, instruction and arithmetic pipeline, data hazards, control hazards and structural hazards, techniques for handling hazards, Exception handling, Pipeline optimization techniques; Instruction-level parallelism: basic concepts, techniques for increasing ILP, superscalar, super pipelined and VLIW processor architectures. Array and vector processors.

Module V [10L]

Multiprocessor architecture: taxonomy of parallel architectures; Centralized shared- memory architecture: synchronization, memory consistency, interconnection networks. Distributed shared-memory architecture. Cluster computers. Non von Neumann architectures: data flow computers, reduction computer architectures, systolic architectures

Text Books:

Course Name: Object Oriented Programming using JAVA

Course Code: IT 402

Contact: 3:0:0

Total Contact Hours: 40

Credits: 3

Prerequisites:

Basic knowledge of computers, basic knowledge of programming.

Course Objectives:

Understand basic of Object-Oriented Programming, Understanding the features of Java, Enable students to write Java program and develop projects.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the key concepts of Object-oriented Programming
CO2:	Apply basic to advanced features of Object-Oriented Programming for problem solving
CO3:	Analyze various programming approaches with different feature of Object-Oriented Programming
CO4:	Evaluate the application and use of different feature of Object-Oriented Programming
CO5:	Design project by the acquired concepts form Object Oriented Programming

Course Content:

Module I: Object Oriented Design: [3L]

Concepts of object oriented programming language, Object, Class, relationships among objects, aggregation, links, relationships among classes-association, aggregation

Module II: Object Oriented Concept: [3L]

Class, object, message passing, inheritance, encapsulation, polymorphism. Difference between OOP and other conventional programming – advantages and disadvantages.

Module III: Understanding Java Programming Language: [2L]

History of Java Programming languages, Purpose of invention of Java. Structure of a basic Java Program, Component of Java Development Kit-API, JRE, Understanding the steps to run a complete Java Program.

Module IV: Basic Components of Java Program: [2L]

Java Tokens-Literals, identifier, keywords, operator, separator, Data types, variables, constant, Type casting-defining type casting, requirement of type casting, implicit and explicit type casting. Control structure. Access specifier.

Module V: Class and Object Properties: [7L]

Defining class and object, Class Members-Local variable, instance variable, class variable, Primitive and Reference variable, Constructor, this keyword, finalize and garbage collection, Array-Declaring and defining array, accessing array elements, length properties, 2D array, anonymous array, array of Objects. Understanding method- method returning object, passing objects, method passing and returning arrays,

use of method overloading. Static-Static block and non static block, static variable, static method. nested & inner classes.

Module VI: Reusability Property: [4L]

Super class & subclasses including multilevel hierarchy, process of constructor calling in inheritance, use of super and final keywords with super () method, dynamic method dispatch, use of abstract classes & methods, interfaces. Creation of packages, importing packages, member access for packages. Serialization and deserialization.

Module VII: String Handling: [4L]

Basic string handling concepts- String (discuss charAt(), compareTo(), equals(), equalsIgnoreCase(), indexOf(), length() , substring(), toCharArray(), toLowerCase(), toString(), toUpperCase(), trim(), valueOf() methods) & StringBuffer classes (discuss append(), capacity(), charAt(), delete(), deleteCharAt(),ensureCapacity(), getChars(), indexOf(), insert(), length(), setCharAt(), setLength(), substring(), toString() methods),concept of mutable and immutable string, command line arguments

Module VIII Exception handling & Multithreading: [4L]

Exception handling basics, different types of exception classes, use of try & catch with throw, throws & finally, creation of user defined exception classes. Basics of multithreading, main thread, thread life cycle, creation of multiple threads, thread priorities, thread synchronization, inter-thread communication, deadlocks for threads, suspending & resuming threads.

Module IX: Basic IO Operation and File Handling: [3L]

Understanding unformatted and formatted IO. Reading and writing files.

Module X : Collection and Generics: [4L]

Array List class, Linked List class, List Iterator interface, HashSet class, Linked HashSet class, Tree Set class, Priority Queue class, Array Deque class, Map interface, HashMap class, Linked Hash Map class, Tree Map class, Hash table class, Comparable and Comparator, Properties class Generics class, Generic interface, Generic Type, Generic Method, Generics Bounded Type parameter

Module XI: JAVA New Feature: [4L]

Lambda Expression, default and static method in interface, Assertion, Annotation, Running Java Program in one command.

Prerequisites:

Elementary discrete mathematics including the notion of set, function, relation, product, partial order, equivalence relation, graph & tree. They should have a thorough understanding of the principle of mathematical induction and various proof techniques.

Course Objectives:

Being familiar with a broad overview of the theoretical foundations of computer science. Students will learn about a variety of issues in the mathematical development of computer science theory, particularly finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand situations in related areas of theory in computer science.
CO2:	Model, compare and analyze different computational models using combinatorial methods and Identify limitations of some computational models and possible methods of proving them.
CO3:	Analyze rigorously formal mathematical methods to prove properties of languages, grammars and Automata.
CO4:	Construct algorithms for different problems and argue formally about correctness on different restricted Machine models of computation.

Course Content:

Module I [14L]

Fundamentals: Basic definition of sequential circuit, block diagram, mathematical representation, and concept of transition table and transition diagram (Relating of Automata concept to sequential circuit concept) Design of sequence detector, Introduction to finite state model Finite state machine: Definitions, capability & state equivalent, kth-equivalent concept, Finite memory definiteness, testing table & testing graph. Minimization of FSM-completely specified and incompletely specified (Merger graph, Merger table, Compatibility graph) Equivalence between two FSM's, Limitations of FSM Application of finite automata, Finite Automata with output- Moore & Melay machine.

Module II [10L]

Deterministic finite automaton and non deterministic finite automaton. Transition diagrams and Language recognizers. Finite Automata: NFA with $\hat{\lambda}$ transitions - Significance, acceptance of languages. Conversions and Equivalence: Equivalence between NFA with and without $\hat{\lambda}$ transitions. NFA to DFA conversion. DFA minimization. Myhill-Nerode theorem Regular Languages: Regular sets. Regular expressions, identity rules. Arden's theorem state and prove Constructing finite Automata for a given regular expressions, Regular string accepted by NFA/DFA. Pumping lemma of regular sets. Closure properties of regular sets (proofs not required). Grammar Formalism: Regular grammars-right linear and

left linear grammars. Equivalence between regular linear grammar and FA.

Module III [10L]

Context free grammar. Derivation trees, sentential forms. Right most and leftmost derivation of strings. Context Free Grammars, Ambiguity in context free grammars. Minimization of Context Free Grammars. Chomsky normal form and Greibach normal form. Pumping Lemma for Context Free Languages. Enumeration of properties of CFL. Closure property of CFL, Ogden's lemma & its applications. Push Down Automata: Push down automata, definition. Acceptance of CFL, Acceptance by final state and acceptance by empty state and its equivalence. Equivalence of CFL and PDA, interconversion. Introduction to DCFL and DPDA.

Module IV [6L]

Turing Machine: Turing Machine, definition, model, Design of TM, Computable functions, Church's hypothesis, counter machine, Types of Turing machines Universal Turing Machine, Halting problem.

Course Name: Communication Engineering & Coding Theory

Course Code: IT 404

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Mathematics, Physics, Electronics.

Course Objectives:

To comprehend basics of communication system and coding techniques, apply the basic concept of PCM systems and baseband transmission schemes.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand basics of communication system and coding schemes.
CO2:	Apply the basic concept of PCM systems and baseband transmission schemes.
CO3:	Analyze and evaluate band pass signaling, communication and coding schemes.
CO4:	Design and evaluate spectral characteristics of band pass signaling schemes and assess noise performance.

Course Content:

Module I: [5L]

Elements of communication system, introduction to signals and modulation. Basic concept of a signal (Amplitude, frequency, wavelength, bandwidth), introduction to baseband transmission - modulation. Elements of Communication systems, origin of noise and its effect on communication system. Concept and need for modulation - types of modulation, concept of time domain and spectral representation of a signal.

Module II: [5L]

Linear Modulation: Basic principles of Amplitude Modulation with Time domain representation of AM signal, modulation index calculation, transmission bandwidth, power & efficiency calculations. Basic concept of square law modulator and balanced modulator. Detection of AM by envelope detector, Synchronous detection for AM-SC. Basic principles of Sideband suppressed techniques and the need for it. Need for carrier suppression. Basic concept of SSB-SC, DSB-SC, VSB-SC. Generation of SSB: Filter method, Phase shift method. Names of SSB-SC, DSB-SC generator and detector

Module III: [5L]

Non linear Modulation & Demodulation: Frequency Modulation and Phase Modulation: Time domain representations, total power calculation for a single tone message. Generation of FM & PM: basic concept and difference of wide band frequency modulation and narrow band frequency modulation. basic concept on direct and indirect method of FM generation : introductory discussion on Armstrong method. Basic block diagram representation of generation of FM & PM: basic Concept of VCO & Reactance modulator only. Demodulation of FM and PM: Only Basic Concept of frequency discriminators Phase Locked Loop

Comparison of various Analog modulation techniques, inter relation between PM and FM

Module IV: [10L]

Sampling and digital transmission: Sampling theorem, Sampling rate, sampling theorem, Nyquist rate, Impulse sampling, Reconstruction from samples, Aliasing; Analog Pulse Modulation – basic discussion on PAM, PWM, PPM. Concept of Quantization & Uniform Quantize, Non-uniform Quantize, Quantization error, signal to quantization noise ratio calculation, A-law & μ -law commanding (after discussion on commanding mention only the two types and their use), Encoding, Coding efficiency. Basic concept of Pulse Code Modulation, Block diagram of PCM, basic concept of DPCM, Delta modulation, basic concept of slope overload and Granular distortion, Adaptive delta modulation. Multiplexing - TDM, FDM, SDM. Line coding & properties, NRZ & RZ, AMI, Manchester coding. Brief discussion on: ISI, Raised cosine function, Nyquist criterion for distortion-less base-band binary transmission, Eye pattern

Module V: [5L]

Digital Carrier Modulation & Demodulation Techniques: Introduction to the different digital modulation techniques-ASK, FSK, PSK, BPSK, QPSK, MSK, Introduction to QAM, Spread Spectrum Modulation – DSSS, FHSS - concept only.

Module VI: [6L]

Information Theory & Coding: Introduction to Information Theory, Entropy, Mutual information, Information rate, channel and bandwidth, Bit rate, Baud rate, Information capacity, Shannon's limit, Shannon-Fano algorithm for encoding, Huffman coding for numerical, Shannon's Theorem - Source Coding Theorem, Information Capacity Theorem. Error control Strategies: (Basic Concept of Data communication, concept of FEC, ARQ and CRC).

Text Books:

1. An Introduction to Analog and Digital Communications, Simon Haykin; Published by Wiley India.
2. Principle of Communication Systems by Herbert Taub and D.L. Schilling
3. Data Communication and Networking by Behrouz A. Forouzan, Published by Tata McGraw-Hill

Course Name: Values & Ethics in Profession

Course Code: HU 401

Contact: 2:0:0

Total Contact Hours: 33

Credits: 3

Prerequisites:

Basic knowledge of management, communication, environment science.

Course Objectives:

To create awareness on professional ethics and Human Values

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the core values that shape the ethical behavior of an engineer and Exposed awareness on professional ethics and human values
CO2:	Understand the basic perception of profession, professional ethics, various moral issues & uses of professional ethics in engineering field
CO3:	Classify the responsibilities of an engineer for safety and risk benefit analysis, professional rights and responsibilities of an engineer
CO4:	Choose about various roles of engineers in variety of global issues and able to apply ethical principles to resolve situations that arise in their professional lives

Course Content:

Module I: [3L]

Introduction: Definition of Ethics; Approaches to Ethics: Psychological, Philosophical, Social.

Module II: [5L]

Psycho-social theories of moral development: View of Kohlberg; Morality and Ideology, Culture and Morality, Morality in everyday Context.

Module III: [5L]

Ethical Concerns: Work Ethics and Work Values, Business Ethics, Human values in organizations: Values Crisis in contemporary society Nature of values: Value Spectrum of a good life.

Module IV: [6L]

Ethics of Profession: Engineering profession: Ethical issues in Engineering practice, Conflicts between business demands and professional ideals. Social and ethical responsibilities of Technologists. Codes of professional ethics. Whistle blowing and beyond, Case studies.

Module V: [6L]

Self Development: Character strengths and virtues, Emotional Intelligence, Social intelligence, Positive cognitive states and processes (Self-efficacy, Empathy, Gratitude, Compassion, and Forgiveness).

Module VI: [8L]

Effects of Technological Growth: Rapid Technological growth and depletion of resources, Reports of the Club of Rome. Limits of growth: sustainable development Energy Crisis: Renewable Energy Resources, Environmental degradation and pollution. Eco-friendly Technologies. Environmental Regulations, Environmental Ethics Appropriate Technology, Movement of Schumacher; Problems of man, machine, interaction.

Text Books:

1. Stephen H Unger, Controlling Technology: Ethics and the Responsible Engineers, John Wiley & Sons, New York 1994.
2. Deborah Johnson, Ethical Issues in Engineering, Prentice Hall, Englewood Cliffs, New Jersey 1991.

Course Name: Computer Organization and Architecture Lab**Course Code: IT 491****Contact: 0:0:3****Credits: 1.5****Prerequisite:**

Basic concept of Digital Electronics.

Course Objectives:

Implementation of digital logic using XLINX tool, Simulate digital circuit design using XLINX tool.

Course Outcome:

After completion of this course student will be able to

CO1:	Apply the knowledge of mathematics, science, and engineering in simulation.
CO2:	Use Hardware Description Language (HDL) in order to implement skills in designing Architectural solutions and describing designs using VHDL
CO3:	Construct and examines digital circuit design using XLINX tool.

List of Experiments:

All laboratory assignments are based on Hardware Description Language (VHDL or Verilog) Simulation.

- HDL introduction.
- Design Implementation of Basic digital logic base programming with HDL.
- Implementation of 8-bit Addition, Multiplication, Division.
- Implementation of combinational circuit Design
- Implementation of 8-bit Register design.
- Implementation of Sequential circuit.
- Memory unit design and perform memory operations.
- Implementation of 8-bit simple ALU design.
- Implementation of 8-bit simple CPU design.

Innovation in implementation of Interfacing of CPU and Memory

Course Name: Object Oriented Programming Lab

Course Code: IT 492

Contact: 0:0:3

Credits: 1.5

Prerequisite:

Basic knowledge of computers, basic knowledge of programming.

Course Objectives:

Enable students to use basic object oriented features in coding, Enable students to develop small projects

Course Outcome:

After completion of this course student will be able to

CO1:	Apply different Object-Oriented Programming Concept for application development
CO2:	Analyze the application of different features of Java in application development
CO3:	Evaluate the performance of different solutions using Java in search of an optimal solution
CO4:	Develop different application using the concept of Java

List of Experiment:

Module I:

Writing simple java program, compiling and running.

Understanding the main () method.

Module II: Basic Java Concepts :

Using basic java token, control structures.

Illustrating class objects, constructor, final, finalize.

Understanding Arrays and hands on application using array.

Understanding and writing methods.

Static and non static concepts.

Module III: Reusable properties:

Class Relationship.

Using inheritance

Creating abstract classes interfaces.

Module IV:

String handling, Basic string handling concepts

Module V: Exception and Threading:

Illustrating exception handling

Illustrating multi threading applications

Module VI: IO:

Basic IO and File IO operation

Module VII : Generics and Collection:

Test application using generics and collection classes.

Module VIII: Innovative Idea Development:

Applying Java new features for developing innovative projects

Text Books:

1. Herbert Schildt Java Complete Reference TMH

Reference Books:

1. Mr Kotiyana JAVA The Complete Core Reference ORACLE
2. Kathie Seira Head Forst Java Orielley

Course Name: Programming Skill Development Lab

Course Code: IT 493

Contact: 0:0:3

Credits: 1.5

Prerequisite:

Mathematics, basic understanding of Computer Programming.

Course Objectives:

The objective of the course is to provide basic knowledge of Python and to design and program Python applications.

Course Outcome:

After completion of this course student will be able to

CO1:	Apply different Programming Concept for application development
CO2:	Analyze the application of different features of Python in application development
CO3:	Evaluate the performance of different solutions using python to find an optimal solution
CO4:	Develop different application using Python

List of Experiment:

Module I: Introduction to Python

Installation of Python, Two modes of using Python Interpreter, Variables and Data Types, Operators and their Precedence

Module II: Loops and Iterations

Iteration: while and for loops, Python Syntax, Colon & Indentation, Syntax of 'for loops', Conditional Execution: if, elif and else, Modify loops: break and continue

Module III: Strings & Lists

Python Strings, Slicing, Python Lists, Mutable and Immutable Types

Module IV: Functions and More on Strings & Lists

Functions, Optional and Named Arguments, More on Strings & Lists experiments, Split and Join Manipulating and Copying Lists

Module V: Modules and Packages

Python Modules and Packages, Different ways to import Packages, File, Input/ Output, The pickle module, Formatted Printing, Exception Handling

Module VI: Graphics, GUI and Object Oriented Programming

Turtle Graphics, Writing GUI Programs, Object Oriented Programming in Python, Inheritance, Reusing code

Module VII: Files and Streams

File related modules in Python, File modes and permissions, Reading & Writing data from a file, Redirecting output streams to files, Working with directories, CSV files and Data Files

Module VIII: Python and Databases

ODBC and Python, Working with Databases in MySQL, Working with Tables in MySQL, Working with SQLite Database

Module IX: Innovative Projects implementation using Python**Text Books:**

1. 'Python for Everybody – Exploring Data in Python 3', Charles Severance, Shroff Publishers & Distributors Pvt. Ltd.
2. 'Python Training Guide', Mercury Learning & Information USA, BPB Publications, 2015.

Course Name: Environmental Science

Course Code: MC 401

Contact: 0:0:3

Total Contact Hours: 22

Credits: 3 Units

Prerequisite:

Knowledge of Basic Chemistry

Course Outcome:

After completion of this course student will be able to

CO1:	Apply the knowledge of environmental science to design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
CO2:	Analyze and discuss the relevance of environmental science to use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
CO3:	Function in multi/inter-disciplinary teams with a spirit of tolerance, patience and understanding so necessary for team work.
CO4:	Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Module I: General: [6L]

Natural Resources: Forest Resource, water resource, mineral resource, energy resources (renewable, non-renewable, potentially renewable). Population Growth: Exponential Growth, logistic growth, Maximum sustainable yield Disaster Management: Types of disasters (Natural & Man-made), Floods, Earthquake, Tsunamis, Cyclones, landslides (cause, effect & control). Ecology & Ecosystem: Elements of ecology, definition of ecosystem- components types and function, Food chain & Food web, Structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, and Aquatic ecosystems. Environmental Management: Environmental impact assessment, Environmental laws and protection act of India, Different international environmental agreement.

Module II: Air Pollution: [6L]

Sources of Pollutants: point sources, nonpoint sources and manmade sources primary & secondary pollutant. Types of air pollutants: primary & secondary pollutant ; Suspended particulate matter, oxides of carbon, oxides of nitrogen, oxides of sulphur, particulate, PAN, Smog (Photochemical smog and London smog). Effects on human health & climate: Greenhouse effect, Global Warming, Acid rain, Ozone Layer Depletion. Air pollution and meteorology: Ambient Lapse Rate, Adiabatic Lapse Rate, Atmospheric stability & Temperature inversion. control of air pollution (ESP, cyclone separator, bag house, catalytic converter, scrubber (ventury)

Module III: Water Pollution: [6L]

Classification of water (Ground & surface water). Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, heavy metals, pesticides, volatile organic compounds. Surface water quality parameters: pH, DO, 5 day BOD test, BOD reaction rate constants, COD. Numerical related to BO Lake: Eutrophication [Definition, source and effect]. Ground water: Aquifers, hydraulic gradient, ground water flow (Definition only), ground

water pollution (Arsenic & Fluoride; sources, effects, control) , Quality of Boiler fed water: DO, hardness, alkalinity, TDS and Chloride, Layout of waste water treatment plant (scheme only).

Module IV: Land Pollution: [2L]

Types of Solid Waste: Municipal, industrial, commercial, agricultural, domestic, hazardous solid wastes (bio-medical), E-waste , Solid waste disposal method: Open dumping, Land filling, incineration, composting, recycling (Advantages and disadvantages).

Module V: Noise Pollution: [2L]

Definition of noise, effect of noise pollution on human health, Average Noise level of some common noise sources, Definition of noise frequency, noise pressure, noise intensity, noise threshold limit value, equivalent noise level, L10 (18 hr Index) . Noise pollution control.

Text Books:

1. A Textbook of Environmental Studies, Shashi Chawla. Tata McGraw Hill Education Private Limited.
2. Environmental Studies, Dr. J P Sharma, University Science Press

* Students may choose either to work on participation in Hackathons etc. Development of new product/ Business Plan/ registration of start-up. Students may choose to undergo Internship / Innovation / Entrepreneurship related activities. Students may choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with industry/ NGO's/ Government organizations/ Micro/ Small/ Medium enterprises to make themselves ready for the industry/ Long Term goals under rural Internship. (Duration 4-6 weeks). Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

Course Name: Design and Analysis of Algorithm

Course Code: IT 501

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Discrete Mathematics Data Structure and Basic Programming Knowledge

Course Objective:

The objective of the course is to study paradigms and approaches used to analyze and design algorithms and to appreciate the impact of algorithm design in practice, use different computational models, order notation and various complexity measures to analyze the complexity/performance of different algorithms.

Course Outcome

After completion of this course students will be able to

CO1:	Understanding the time complexity of the basic algorithms for the classic problems in various domains.
CO2:	Apply the classic algorithms to solve different problems
CO3:	Evaluate existing algorithms by calculating the time complexity
CO4:	Design algorithm to solve various problems in different domains

Course Contents:

Module I: [2L]

Introduction: Time and Space Complexity, Different Asymptotic notations and their mathematical significance

Module II : [8L]

Divide and Conquer: Basic method, use, Merge Sort, Quick Sort and their complexity, Heap Sort and its complexity

Dynamic Programming: Basic method, use, Matrix Chain multiplication, All pair shortest paths, single source shortest path, Strassen's matrix multiplication algorithm.

Module III: [8L]

Backtracking: Basic method, use, 8 queens problem, Graph coloring problem.

Greedy Method: Basic method, use, Knapsack problem, traveling sales man, Job sequencing with deadlines, Minimum cost spanning tree by Prim's and Kruskal's algorithm.

Module IV: [3L]

Branch and bound technique: integer programming, 0/1 knapsack problem

Module V: [4L]

Disjoint set manipulation: Set manipulation algorithm like UNION-FIND, union by rank.

String matching problem: Different techniques – Naive algorithm, Knuth, Morris, Pratt (KMP) algorithm with their complexities.

Module VI: [6L]

Amortized Analysis: Aggregate, Accounting, and Potential Method.

Network Flow: Ford Fulkerson algorithm, Max-Flow Min-Cut theorem (Statement and Illustration)

Module VII: [5L]

Notion of NP-completeness: P class, NP class, NP hard class, NP complete class – their interrelationship, Satisfiability problem, Cook's theorem (Statement only).

Approximation Algorithms: Necessity of approximation scheme, performance guarantee, polynomial time approximation schemes.

Course Name: Software Engineering

Course Code: IT 502

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Mathematics, Data Structure and Basic Computations.

Course Objective:

In this course, students will gain a broad understanding of the discipline of software engineering and its application to the development of and management of software systems. Knowledge of basic software engineering methods and practices and their appropriate application.

Course Outcome

After completion of this course student will be able to

CO1:	Identify the need for engineering approach to software development and various processes of requirements analysis for software engineering problems.
CO2:	Apply software engineering principles, techniques to develop and maintain, large scale software systems
CO3:	Analyze and design of complex systems and meet ethical standards, legal responsibilities
CO4:	Produce efficient, reliable, robust and cost-effective software solutions and perform independent research and analysis as an effective member or leader of software development team to achieve personal and team goals

Course Contents:

Introduction [2L]

Definition of Software Engineering, Software crisis, Evolution of technology- Hype curve, Exploratory style of Software development vs. Software Engineering, Human cognition mechanism, Software Engineering principle- abstraction and decomposition.

Software Development Life Cycle Models [4L]

Water fall model, V-shape Model, Prototyping Model, Spiral Model, RAD Agile Model, Verification and Validation.

Software Project Management [7L]

Responsibility of a project manager, Project planning, Metrics for project size estimation, Project estimation techniques, COCOMO model, Halstead's Software Science, Scheduling- CPM, PERT, Gantt chart, Risk management, Software configuration management, Staffing and team leader project and planning

Requirement analysis and specification [3L]

SRS, Requirement gathering and specification, Functional requirement, Traceability.

Software Design [8L]

Characteristics of a good software, Cohesion and coupling, Function oriented design- DFD, Structure chart. Design phase in life cycle, System Design Definitions, Concept and methodologies, data flow-oriented Design, Program Design and the requirements. Object oriented design- class and relationship, UML diagrams.

Coding and Testing [7L]

Coding Standard, software documentation, Testing- unit testing, black box testing- equivalence class partitioning, boundary value analysis, white box testing- McCabe's Cyclometric Complexity, Mutation Testing, Debugging, Program analysis tool, Integration Testing, Grey box testing, System testing- Smoke and performance testing.

Software Reliability and Quality Management [2L]

Reliability, Hazard, MTTF, Repair and Availability, Software quality, Software reliability and fault-tolerance, six-sigma.

Computer-aided software engineering [3L]

Computer-aided software engineering (CASE)-environment and benefit. Function point methods (FSM,ISO,OMG) & Metrics. Standards: Capability Maturity Model Integration, ISO 9001.

Course Name: Operating System

Course Code: IT 503

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Computer organization and Architecture, Data Structures, Algorithms & Programming Concept

Course Objective:

The objective of the course is to present an introduction to operating systems, with an emphasis on concurrency and control of asynchronous processes, deadlocks, memory management, processor and disk scheduling, parallel processing, and file system organization.

Course Outcome:

After completion of this course students will be able to

CO1:	Demonstrate competence in recognizing and using operating system features.
CO2:	Apply knowledge of different operating system algorithms.
CO3:	Analyze theory and implementation of different operating system aspect and the structure and basic architectural components involved in operating system.
CO4:	Evaluate different operating system approaches.

Course Contents:

Introduction: [2L]

Introduction to OS. Operating system functions, evaluation of O.S., Different types of O.S.: batch, multi-programmed, timesharing, real-time, distributed, parallel.

System Structure: [2L]

Computer system operation, I/O structure, storage structure, storage hierarchy, different types of protections, operating system structure (simple, layered, virtual machine), O/S services, system calls.

Processes: [3L]

Concept of processes, process scheduling, operations on processes, co-operating processes, inter-process communication.

Threads: [2L]

Overview, benefits of threads, user and kernel threads.

CPU Scheduling: [3L]

Scheduling criteria, preemptive & non-preemptive scheduling, scheduling algorithms (FCFS, SJF, RR, priority), algorithm evaluation, multi-processor scheduling.

Synchronization: [4L]

Background, critical section problem, critical region, synchronization hardware, classical problems of synchronization, semaphores.

Deadlock: [4L]

System model, deadlock characterization, methods for handling deadlocks, deadlock prevention, deadlock avoidance, deadlock detection, recovery from deadlock.

Memory Management: [3L]

Background, logical vs. physical address space, swapping, contiguous memory allocation, Pre-paging, paging, segmentation, segmentation with paging.

Virtual Memory:[4L]

Background, demand paging, performance, page replacement, page replacement algorithms (FCFS, LRU), allocation of frames, thrashing, Virtualization(VMware).

File Systems:[3L]

File concept, access methods, directory structure, file system structure, allocation methods (contiguous, linked, indexed), free-space management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency & performance.

I/O Management:[3L]

I/O hardware, polling, interrupts, DMA, application I/O interface (block and character devices, network devices, clocks and timers, blocking and non blocking I/O), kernel I/O subsystem (scheduling, buffering, caching, spooling and device reservation, error handling), performance.

Disk Management: [3L]

Disk structure, disk scheduling (FCFS, SSTF, SCAN,C-SCAN), disk reliability, disk formatting, boot block, bad blocks.

Course Name: Programming Practice with C++

Course Code: IT 504A

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Basic computer programming concepts

Course Objective:

The objective of the course is to introduce with the object-oriented programming paradigm using C++ and make the students understand different concept of C++ and apply the features in application development.

Course Outcome

After completion of this course student will be able to

CO1:	Understand different programming paradigm and Object-Oriented programming concept.
CO2:	Determining best possible feature of Object-Oriented Programming in solution providing.
CO3:	Analyze different feature of Object-Oriented Programming in search of optimal solution.
CO4 :	Evaluate use and application of different Object-Oriented programming concept.
CO5:	Design solution in application development.

Course Contents:

Module I: [2L]

Introduction

Concepts of object-oriented programming language, Language translator, Basics of OOPs, Structure of C++ program, Class and object, Abstraction and encapsulation, Polymorphism.

Module II: [8L]

Array, Function, Pointer & Data abstraction

Array, Addresses, Pointer. Function: Declaration, Definition and call, Inline function, Main function argument, Reference variable, Function overloading, Default argument, Parameter passing, Recursion, Scope of variable, Return-by-value and Return-by-reference, Pointer to function. Class, Members, Constructor and destructor, Copy constructor. Dynamic memory management: Operators new and delete, Malloc and free, Static member, Scope of class names, Scope of variables. Friend Function: understanding friend function and its use Pre-processor.

Module III: [12L]

Class relationships: Operator Overloading, Polymorphism & Standard Library in C++

Overloading unary and binary operator, Overloaded function calls, Subscripting, class member access, Non-member operator, New and delete, Cast operator. Introduction, Polymorphism, Coercion, Overloading, Parametric and inclusion polymorphism Inheritance: direct and indirect super classes, Multiple inheritance, Virtual base class, Friend, Virtual function, Abstract class, Overriding and hiding, Dynamic binding of functions, Virtual destructor and operators. Standard library in C++: Standard library function, Input and output, Iostream class hierarchy, Class ios, Other stream classes, File Handling.

Module IV: [8L]**Template , Exception Handling & UML Diagram**

Class template, Member function inclusion, Function template, Specialization, Inheritance, Namespace. Concept of exception handling, Catch block, Nested try-catch block, Condition expression in throw expression, Constructor & destructor, Runtime standard exception. Object oriented design and modeling: Software architecture, Process life cycle, phases, Modularity, OO methodology, Modeling, UML overview, Object oriented design patterns.

Module V: [6L]**Introduction to C++11 Features**

Lambda Expressions, Automatic Type Deduction and decl type, Uniform Initialization Syntax, Deleted and Defaulted Functions, null ptr, Delegating Constructors, Rvalue References, Threading Library

Text Books:

1. Schildt, H., The Complete Reference C++, McGraw – Hill.
2. Balaguruswamy, Object Oriented Programming C++ McGraw – Hill.

Reference Books:

1. C++ object oriented programming paradigm, Debasish Jana, PHI
2. Programming In C++, Y.I. Shah and M.H. Thaker, ISTE/EXCEL BOOKS

Course Name: Artificial Intelligence

Course Code: IT 504B

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Basic concept of computer science and automation, Knowledge of programming languages, Basic mathematical concept like calculus, probability, metrics and statistics.

Course Objectives:

Apply knowledge of computing and mathematics appropriate to the discipline. Analyze a problem and identify and define the computing requirements appropriate to its solution. Design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs. Understand current techniques, skills, and tools necessary for computing practice.

Course Outcome

After completion of this course student will be able to

CO1:	Understand various AI search algorithms for instance uninformed, informed, heuristic, constraint satisfaction.
CO2:	Apply facts, rules, and concepts of knowledge representation for instance logic-based, frame-based, semantic nets, inference and theorem proving.
CO3:	Analyze working knowledge of reasoning in the presence of incomplete and/or uncertain information.
CO4:	Evaluate and create knowledge representation, reasoning, and machine learning techniques for the solution of real-world problems.

Course Content:

Introduction to Artificial Intelligence and Agent [3L]:

Foundations and History of Artificial Intelligence, Turing Test, Intelligent Agents – Agents and environment. Concept of Rationality, Nature of environments and Structure of agents.

Searching and Problem Solving: [12L]:

Problem solving agents - Problem formulation with suitable examples, searching for solutions, 8 puzzle problem, tower of Hanoi problem, water jugs problem, 8-queen problem, Data driven and goal driven search, Uninformed search strategies – Breadth-first search, Uniform-cost search, depth-first search, Depth-limited search, Uninformed search strategies Iterative deepening depth-first search, Bidirectional search, avoiding repeated states, Informed search strategies – Greedy best first search, A* search, Informed search strategies Memory-bounded heuristic search, Heuristic Functions, Constraint satisfaction problems.

Game Playing: [2L]:

Adversarial search, Mini-max, alpha-beta pruning.

Knowledge Representation and Reasoning: [10L]:

Building a Knowledge Base, Propositional logic, first order, script and frame, Logic, situation calculus. Theorem Proving in First Order Logic. Planning, partial order planning, Hierarchical Task network planning, Planning and acting in nondeterministic domains. Uncertain Knowledge and Reasoning, Probabilities, Bayesian Networks, Inference using full joint distribution, Independence,

Bayes' rule and its use, Semantics of Bayesian Networks, Exact Inference in Bayesian networks, Dempster-Shafer-theory.

Learning: [5L]:

Learning from observation – Forms of learning, Inductive learning, Learning Decision trees, Knowledge in learning - Explanation based learning, Learning Decision Trees, Neural Networks Clustering concept, Reinforcement Learning – Introduction, Passive reinforcement Learning, Active Reinforcement Learning.

Expert Systems [4L]:

Introduction to Expert system, Expert System Design, Expert System Shell, Case Studies of Typical Expert Systems, PROLOG.

Text Books:

1. Fuzzy Logic with Engineering Applications, Timothy J. Ross, Willey.
2. Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis & Applications, S.Rajasekaran, G. A. Vijayalakshami, PHI.
3. Genetic Algorithms: Search and Optimization, E. Goldberg

Reference Books:

1. Neuro-Fuzzy Systems, Chin Teng Lin, C. S. George Lee PHI.
2. Elements of Artificial Neural Network, Kishan Mehrotra, MIT Press.
3. An Introduction to Genetic Algorithms, Melanie Mitchell, MIT Press.

Course Name: Microprocessor & Microcontroller

Course Code: IT 504C

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Digital Electronics, Computer Programming, Computer Organisation and Architecture

Course Objective:

To develop an in-depth understanding of the operation of microprocessors and microcontrollers, machine language programming & interfacing techniques.

Course Outcome:

After completion of this course student will be able to

CO1:	Correlate the architecture, instructions, timing diagrams, addressing modes, memory interfacing, interrupts, data communication of 8085
CO2:	Apply instructions for assembly language programs of 8085, 8086 and 8051
CO3:	Analyze Micro controller hardware, input/output pins, ports, external memory, counters and timers, instruction set, addressing modes, serial data i/o, interrupts

Course Contents:

Module -1: [10L]

Introduction to Microcomputer based system. History of evolution of Microprocessor and Microcontrollers and their advantages and disadvantages.

Architecture of 8085 Microprocessor, Pin description of 8085.

Address/data bus Demultiplexing , Status Signals and the control signals.

Instruction set of 8085 microprocessor, Addressing modes

Timing diagram of the instructions (a few examples).

Module -2: [10L]

Assembly language programming with examples, counter and Time Delays, Stack and Subroutine Interrupts of 8085 processor (software and hardware), I/O Device Interfacing-I/O Mapped I/O and Memory Mapped I/O, Serial (using SID and SOD pins and RIM, SIM Instructions) and Parallel data transfer.

Module 3: [8L]

The 8086 microprocessor- Architecture, Addressing modes, interrupts

Introduction to 8051 Microcontroller –Architecture, Pin Details

Addressing modes, Instruction set, Examples of Simple Assembly Language.

Module -4: [8L]

Memory interfacing with 8085, 8086

Support IC chips- 8255, 8251, 8237/8257, 8259

Interfacing of 8255 PPI with 8085 and Microcontroller 8051.

Brief introduction to PIC microcontroller (16F877)

Text Book:

1. Microprocessor architecture, programming and application with 8085 – R. Gaonkar, Penram International
2. Fundamentals of microprocessor and microcontroller- B.Ram
3. An Introduction to Microprocessor and Applications –Krishna Kant, Macmillan

Reference Book:

1. Microprocessors and microcontrollers - N. Senthil Kumar, M. Saravanan and Jeevananthan, Oxford university press
2. 8086 Microprocessor –K Ayala, Cengage learning
3. Ray & Bhurchandi, Advanced Microprocessors & Peripherals, TMH
4. The 8051 microcontrollers – Uma Rao and Andhe Pallavi, Pearson
5. The 8051 Microcontroller and Embedded System- Mazidi
6. The 8051 microcontroller - K. Ayala, Thomson

Course Name: Industrial & Financial Management**Course Code: HU 503****Contact: 2:0:0****Total Contact Hours: 24****Credits: 2****Prerequisite:**

Mathematics, English.

Course Objective:

Introduce students to financial management and its importance and its applications in business, their relationship with the business environment and the role and functions of chief financial officer. Introduce students to financial planning, and objectives, and its benefits, and the types of areas and stages of financial planning, and the factors that help the success of financial planning and the methods used in financial planning to assess the short-term financial needs.

Course Outcome

After completion of this course student will be able to

CO1:	Explain and describe various technology-based business models and the dynamics of value creation, value proposition, and value capture in industrial enterprises
CO2:	Select, interpret and use different costing techniques as a basis for decisions in various business situations
CO3:	Understand the basic principles of financial accounting and reporting
CO4:	Produce and interpret an industrial company's Annual Statement, at a basic level

Course Content:**Introduction [6L]**

Introduction to Accounting, Important Definitions, Basic concepts and conventions, Types of Accounts with Golden Rule of Accounting, Journal, Ledger and Trial Balance, Preparation of Trading Account, Profit & Loss A/C and Balance Sheet for business organizations.

Financial Management [8L]

Introduction to Financial Management, Introduction, Definition and concept, scope, objective, functions of Finance Manager. Ratio Analysis: Definition, Objectives, Advantages & Disadvantages. Classification of Ratios: Liquidity ratios, Capital Structure ratios, Activity ratios & Profitability Ratios, Capital Budgeting: Nature of Investment Decision, Importance of Capital Budgeting, capital budgeting process, Investment criteria, payback period, Rate of return, cash flow, discounting cash flow NPV method and IRR method, Benefit cost ratio, ARR.

Cost Accounting [5L]

Introduction to cost accounting-Cost Centre Cost unit, Elements of costs, Statement of cost or cost sheet, Marginal cost & C-V-P analysis with BEC. Budget and Budgetary Control: Concepts of Budget, Budgeting and budgetary control, advantages, disadvantages, uses, Master Budget, Zero Based Budget, Cash budget, Flexible budget.

Working capital management [3L]

Introduction-working capital concept-financing working capital-importance of working capital-management of working capital-working capital cycle-management of different components of working capital-working capital forecast.

Introduction to GST [2L]

Introduction to GST-Basic concept and application.

Text Books:

1. Financial Management, Khan & Jain, S. Chand
2. Management Accounting, Khan & Jain, S. Chand
3. Modern Accountancy, Haniff & Mukherjee, TMH

Reference Books:

Course Name: Constitution of India

Course Code: MC 501

Contact: 3:0:0

Total Contact Hours: 32

Course Outcome:

After completion of this course student will be able to

CO1:	Comprehend the Fundamental Rights and Fundamental Duties of the Indian Citizen to implant morality, social values and their social responsibilities.
CO2:	Create understanding of their Surroundings, Society, Social problems and their suitable solutions.
CO3:	Familiarize with distribution of powers and functions of Local Self Government.
CO4:	Realize the National Emergency, Financial Emergency, and their impact on Economy of the country.
CO5:	Develop human values, create awareness about ratification and significance of Constitution.

Course content:

1. Meaning of the constitution law and constitutionalism (2L)
2. Historical perspective of the Constitution of India (2L)
3. Salient features and characteristics of the Constitution of India (1L)
4. Scheme of the fundamental rights (2L)
5. The scheme of the Fundamental Duties and its legal status (2L)
6. The Directive Principles of State Policy – Its importance and implementation (2L)
7. Federal structure and distribution of legislative and financial powers between the Union and the States (3L)
8. Parliamentary Form of Government in India – The constitution powers and status of the President of India (2L)
9. Amendment of the Constitutional Powers and Procedure (2L)
10. The historical perspectives of the constitutional amendments in India (2L)
11. Emergency Provisions: National Emergency, President Rule, Financial Emergency (3L)
12. Local Self Government – Constitutional Scheme in India (3L)
13. Scheme of the Fundamental Right to Equality (2L)
14. Scheme of the Fundamental Right to certain Freedom under Article 19 (2L)
15. Scope of the Right to Life and Personal Liberty under Article 21. (2L)

Text Books:

1. Introduction to Constitution of India, D.D. Basu, Lexis Nexus
2. The Constitution of India, PM Bhakshi, Universal Law

Course Name: Design Analysis of Algorithm Lab**Course Code: IT 591****Contact: 0:0:3****Credits: 1.5****Prerequisite:**

Discrete Mathematics, Data Structure, Basic Programming Knowledge

Course Objective:

The objective of the course is to analyze and design algorithms, use different computational models, order notation and various complexity measures to analyze the complexity/performance of different algorithms.

Course Outcome

After completion of this course student will be able to

CO1:	Apply different algorithmic approaches for solving the problems.
CO2:	Analyze a problem and design the solution for the problem and analyse the efficiency of algorithms using time and space complexity theory.
CO3:	Design and Optimize the solution with respect to time complexity & memory usage.

Course Content:

1. Implement Merge Sort using Divide and Conquer approach
2. Implement Quick Sort using Divide and Conquer approach
3. Find the minimum number of scalar multiplication needed for chain of matrix using dynamic programming
4. Implement all pair of Shortest path for a graph (Floyd- Warshall Algorithm) using dynamic programming
5. Implement Traveling Salesman Problem using dynamic programming
6. Implement Single Source shortest Path for a graph using Bellman Ford Algorithm
7. Implement 15 Puzzle Problem using Branch and Bound technique.
8. Implement 8 Queen Problem using Backtracking.
9. Implement any one of the following problems using Backtracking:
 - Graph Coloring Problem
 - Hamiltonian Problem
10. Implement any one of the following problem using Greedy method:
 - Knapsack Problem
 - Job sequencing with deadlines
11. Implement KMP algorithm for string matching.
12. Implement Ford Fulkerson algorithm.

Text books:

1. Aho, J. Hopcroft and J. Ullman "The Design and Analysis of Algorithms"
2. D. E. Knuth "The Art of Computer Programming", Vol. 3
3. E. Horowitz and Shani "Fundamentals of Computer Algorithms"

Course Name: Software Engineering Lab

Course Code: IT 592

Contact: 0:0:3

Credits: 1.5

Perquisite:

Familiar with MS Office Package and Basic Computations.

Course Objective:

Demonstrate the UML diagrams with ATM system descriptions, Demonstrate the working of software testing tools with c language, Understanding Project Planning Tools.

Course Outcome:

After completion of this course student will be able to

CO1:	Make use of efficient models for development of software for various projects.
CO2:	Analyze a specification and examine the corresponding design for developing software.
CO3:	Produce efficient, reliable, robust and cost-effective software solutions Designing valid test cases.

List of Experiments:

1. Identifying the Requirements from Problem Statements
2. Requirements, Characteristics of Requirements, Categorization of Requirements, Functional Requirements, Identifying Functional Requirements
3. Estimation of Project Metrics
4. Project Estimation Techniques -COCOMO, Basic COCOMO Model, Intermediate COCOMO Model, Complete COCOMO Model, Advantages of COCOMO, Drawbacks of COCOMO, Halstead's Complexity Metrics
5. Modeling UML Use Case Diagrams and Capturing Use Case Scenarios
6. Use case diagrams, Actor, Use Case, Subject, Graphical Representation, Association between Actors and Use Cases, Use Case Relationships, Include Relationship, Extend Relationship, Generalization Relationship, Identifying Actors, Identifying Use cases, Guidelines for drawing Use Case diagrams
7. Identifying Domain Classes from the Problem Statements
8. Introduction to selenium tool for software testing.
9. JUnit, Static analysis, Junit Framework
10. Prepare a SRS document in line with the IEEE recommended standards
11. Draw the use case diagram and specify the role of each of the actors. Also state the precondition, post condition and function of each use case.
12. Draw the sequence diagram for any two scenarios.
13. Draw the collaboration diagram.
14. Draw the state chart diagram & component diagram.
15. Draw the deployment diagram.

Course Name: Operating System Lab

Course Code: IT 593

Contact: 0:0:3

Credits: 1.5

Prerequisite:

Computer architecture, C,C++, Java

Course Objective:

The objective of the course is to have students understand and appreciate the principles in the design and implementation of operating systems software.

Course Outcome

After completion of this course student will be able to

CO1:	Experiment with Unix commands and shell programming
CO2:	Analyze the best CPU scheduling algorithm, memory management algorithm, synchronization techniques for a given problem instance
CO3:	Develop algorithm for deadlock avoidance, detection and file allocation strategies

Course Contents:

1. Managing Unix/Linux Operating System :

Installation & Configuration of Operating Systems-Multi Booting, VMware installation, Creating a bash shell script, making a script executable, shell syntax (variables, conditions, control structures, functions, commands). Partitions, Swap space, Device files, Raw and Block files, Formatting disks, Making file systems, Super block, I-nodes, File system checker, Mounting file systems, Logical Volumes, Network File systems, Backup schedules and methods Kernel loading, init and the inittab file, Run-levels, Run level scripts. Password file management, Password security, Shadow file, Groups and the group file, Shells, restricted shells, user-management commands, homes and permissions, default files, profiles, locking accounts, setting passwords, Switching user, Switching group, Removing users & user groups.

2. **Process:** starting new process, replacing a process image, duplicating a process image, waiting for a process, zombie process.

3. **Signal:** signal handling, sending signals, signal interface, signal sets.

4. **Semaphore:** programming with semaphores (use functions semctl, semget, semop, set_semvalue, del_semvalue, semaphore_p, semaphore_v).

5. **POSIX Threads:** programming with pthread functions (viz. pthread_create, pthread_join, pthread_exit, pthread_attr_init, pthread_cancel)

6. **Inter-process communication:** pipes (use functions pipe, popen, pclose), named pipes (FIFOs, accessing FIFO), message passing & shared memory (IPC version V).

Course Name: Programming Practice with C++ Lab

Course Code: IT 594A

Contact: 0:0:3

Credits: 1.5

Prerequisite:

Basic Computer concepts

Course Objective:

The objective of the course is to introduce with the object oriented programming paradigm using C++ and make the students understand different concept of C++ and apply the features in application development.

Course Outcome

After completion of this course student will be able to

CO1:	Apply the concept Object oriented programming concept using C++ in developing solution
CO2:	Analyze different characteristics of Object Oriented programming using C++ for choosing in developing solution
CO3:	Evaluate the application of Inheritance and polymorphism in developing solution
CO4:	Create application using different feature of C++

List of Experiments:

Introduction

Introduction of UNIX/Linux Operating System which includes preliminary commands, start-up & shutdown methodology, file handling as well as introduction to editors like Vi editor, introduction to GNU C & C++ compiler, as well as introduction to GNU & GDB script.

Basic Programming Concepts

Introduction to C++, basic loop control, executing programs, writing functions, selection statements, review of functions and parameters, command line arguments, recursion

Stream and Structure

I/O streams, arrays and string manipulation, pointers, structures & unions Template , Exception

Object Oriented Concepts

Object-Oriented Programming in C++, fundamentals of classes, constructors-destructors. Dealing with member functions

Overloading

Operator overloading and Polymorphism (both static & dynamic).

Inheritance

Introduction to Inheritance, derived class handling, abstract class, virtual class, overriding, template class, name-space & exception handling.

Memory Management

Dynamic memory allocation, implementation of Linked Lists, using C++.

C++11 Features

Basic C++11 features

Innovative Experiments

Design innovative projects using C++

Text Books:

1. Schildt, H., The Complete Reference C++, McGraw – Hill.
2. Balaguruswamy, Object Oriented Programming C++ McGraw – Hill.

Perquisite:

Knowledge of programming languages.

Course Objective:

Apply knowledge of computing and mathematics appropriate to the discipline. Analyze a problem, and identify and define the computing requirements appropriate to its solution. Design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs. Understand current techniques, skills, and tools necessary for computing practice.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand and recognize various AI search algorithms and AI tools.
CO2:	Apply the fundamentals of knowledge representation, inference and theorem proving using AI tools.
CO3:	Analyze working knowledge of reasoning in the presence of incomplete and/or uncertain information.
CO4:	Evaluate and create knowledge representation, reasoning, and machine learning techniques for the solutions of real-world problems.

List of Experiments:

A. Write the following programs using PROLOG

1. Study of PROLOG facts and rules.
2. Write a program to compute factorial of a number.
3. Write a program to compute GCD of two numbers.
4. Write a program to represent facts and rules.
5. Write a program to represent a family tree.
6. Write a program to diagnosis intelligently.
7. Write a program to check whether a given line segment is vertical or horizontal.
8. Write a program for list processing.

B. Write the following programs using PROLOG

1. Write a program to solve 8 queens problem
2. Solve any problem using depth first search.

3. Solve any problem using best first search.
 4. Solve 8-puzzle problem using best first search
 5. Solve Robot (traversal) problem using means End Analysis
 6. Solve traveling salesman problem.
- C. Write some programs on recent trend in AI (It may be recent real world problems)
Jupyter Notebook(iPython) :Medical diagnosis. Design an Expert System

Projects assigned by instructor to model and solve real world problems.

Text Books:

1. Artificial Intelligence: A Modern Approach,. Russell & Norvig, Prentice Hall.
2. Artificial Intelligence, Elain Rich and Kevin Knight, TMH.

Reference Book:

1. Prolog Programming for Artificial Intelligence Paperback by Ivan Bratko
2. Jacek M. Zurada, "Introduction to Artificial Neural Systems", PWS Publishers

Course Name: Microprocessor and Microcontroller Lab**Course Code: IT 594C****Contact: 0:0:3****Credits: 1.5****Prerequisite:**

Basic Knowledge of Digital Electronics

Course Objective:

To apply Assembly Level Programming for arithmetic-logical solutions and also to interpret the interfacing programming by conducting experiments.

Course Outcome

After completion of this course student will be able to

CO1:	Solve small assignments using the 8085 basic instruction sets and memory mapping through trainer kit and simulator.
CO2:	Write 8085 assembly language programs like Addition, Subtraction, Multiplication, Square, Complement, Look up table, Copying a block of memory, Shifting, Packing and unpacking of BCD numbers, Ascending order, Descending order etc. using trainer kit.
CO3:	Validate the interfacing technique using 8255 trainer kit through subroutine calls and IN/OUT instructions like glowing LEDs accordingly, stepper motor rotation etc
CO4:	Test fundamental of 8051 programs using the trainer kit.

List of Experiments:

1. Familiarization with 8085 register level architecture, the basic instruction sets (data transfer, arithmetic, logical, branching) and the trainer kit components including the memory map.
2. Familiarization with the process of storing, executing and viewing the contents of memory as well as registers in the trainer kit 8085 and simulator through small assignments.
3. Programming using 8085 kit and simulator for: Addition, Subtraction, Multiplication by repeated addition method, Square, Complement, Look up table, Copying a block of memory, Shifting, Packing and unpacking of BCD numbers, Addition of BCD numbers, Binary to ASCII conversion, Smallest and Largest number from an array of numbers, Ascending order, Descending Order, String Matching, Multiplication using shift and add method.
4. Program using subroutine calls and IN/OUT instructions using 8255 PPI on the trainer kit e.g. subroutine for delay, reading switch state and glowing LEDs accordingly, glowing of seven segment display.

Program for serial communication between two trainer kits.

1. Interfacing of 8255: Keyboard, Stepper motor rotation.
2. Study of 8051 Micro controller kit and writing programs.

Text Book:

1. Microprocessor architecture, programming and application with 8085 – R. Gaonkar, Penram International
2. Fundamentals of microprocessor and microcontroller- B.Ram

Reference Book:

1. Microprocessors and microcontrollers - N. Senthil Kumar, M. Saravanan and Jeevananthan, Oxford university press
2. 8086 Microprocessor –K Ayala, Cengage learning
3. Ray & Bhurchandi, Advanced Microprocessors & Peripherals, TMH
4. The 8051 Microcontroller and Embedded System- Mazidi.

*Students may choose either to work on participation in all the activities of Institute's Innovation Council for eg: IPR workshop/ Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos etc. Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

Course Name: Database Management System

Course Code: IT 601

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Mathematics, Data Structure, Operating System.

Course Objective:

The objective of the course is to present an introduction to database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a DBMS.

Course Outcome

After completion of this course student will be able to

CO1:	Understand Database Management System, explain fundamental elements of a database management system, compare the basic concepts of relational data model, entity-relationship model, file organization and use appropriate index structure.
CO2:	Apply efficient query optimization techniques, suitable transaction management, concurrency control mechanism and recovery management techniques.
CO3:	Analyze the database design techniques and improve the design by normalization.
CO4:	Design entity-relationship diagrams to represent simple database application scenarios, translate entity-relationship diagrams into relational tables, populate a relational database and formulate SQL queries on the data.

Course Contents:

Module I: Introduction: [2L]

Concept & Overview of DBMS, Data Models, Database Languages, Database Administrator, Database Users, Three Schema architecture of DBMS.

Module II: Entity-Relationship Model: [3L]

Basic concepts, Design Issues, Mapping Constraints, Keys, Entity-Relationship Diagram, Weak Entity Sets, Extended E-R features.

Module III: Relational Model: [4L]

Structure of relational Databases, Relational Algebra, Relational Calculus, Extended Relational Algebra Operations, Views, Modifications of the Database.

Module IV: SQL and Integrity Constraints: [8L]

Concept of DDL, DML, DCL. Basic Structure, Set operations, Aggregate Functions, Null Values, Domain Constraints, Referential Integrity Constraints, assertions, views, Nested Sub queries, Database security application development using SQL, Stored procedures and triggers.

Module V: Relational Database Design: [9L]

Functional Dependency, Different anomalies in designing a Database., Normalization using functional dependencies, Decomposition, Boyce-Codd Normal Form, 3NF, Normalization using multi-valued dependencies, 4NF, 5NF

Module VI: Internals of RDBMS: [6L]

Physical data structures, Query optimization: join algorithm, statistics and cost bas optimization. Transaction processing, Concurrency control and Recovery Management: transaction model properties, state serializability, lock base protocols, two phase locking.

Module VII: File Organization & Index Structures: [4L]

File & Record Concept, placing file records on Disk, Fixed and Variable sized Records, Types of Single-Level Index (primary, secondary, clustering), Multilevel Indexes, Dynamic Multilevel Indexes using B tree and B+ tree.

Text Books:

1. Henry F. Korth and Silberschatz Abraham, "Database System Concepts", Mc.Graw Hill.
2. Elmasri Ramez and Novathe Shamkant, "Fundamentals of Database Systems", Benjamin Cummings Publishing. Company.

Reference Books:

1. Raghu Ramakrishnan and Johannes Gehrke, Database Management Systems (3/e), McGraw Hill.
2. Peter Rob and Carlos Coronel, Database Systesm- Design, Implementation and Management (7/e), Cengage Learning.

Course Name: Web Technology

Course Code: IT 602

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Computer Networking, Database Management System, JAVA Programming Language

Course Objective:

Describing the web application architecture and protocols, illustrating different technologies those are used to develop web applications, describing different frameworks those used to develop web applications

Course Outcome:

At the end of the course students will be able to

CO1:	Understand web application architecture, technologies, and frameworks
CO2:	Apply the concept of different front end and back-end components in problem solving
CO3:	Analyze different architecture and web components
CO4:	Evaluate different solutions in field of web application development
CO5:	Design web application architecture to provide solution in web application development fields

Course Content:

Module I: Introduction to World Wide Web: [2L]

Web Architecture, Web Applications, Web servers, Web Browsers and Agents, Internet standards, DNS, SMTP, Pull and Push mechanism: Pros and Cons. HTTP, HTTPS, XMPP

Module II: Mark-up: [2L]

HTML: Elements, Attributes, Tags, Forms, Input, Frames, Tables.

Module III: Cascading Style Sheets: [2L]

Advantages, Rules, CSS, inline and external, using template Layouts.

Module IV: Java Script and Node JS: [5L]

Basic java Script concepts, Use of Java Script, Variable, Object, function, Event Handling. Evaluation of Java Scrip. Create, Publish, Extend & Manage, Node.js HTTPs : Create Server and Get Data, Node.js Express, Node JS Mongo DB. Node.js Promise, Node.js Generators & Compare with Callbacks, Node js Streams : File stream, Pipes, Node.js Testing with Jasmine

Module V: Server-side Programming: [7L]

Servlets: HTTP Tunneling, Programmatically issuing HTTP GET, POST etc. and retrieval of content Concept of Dynamic Web pages, Web server versus Application server, Role of threading in a Server, Servlet-2.x API conforming to Web 2.0: Role of web.xml as deployment descriptor, request and response, Basic request handling, parameter retrieval, multiple parameter retrieval, inter-Servlet collaboration: Dispatching the request, Concept of state of web: Sessions, tracking

session, Using Cookies and jsession Id, Parameter passing to and from session, Servlet Filters and common uses of Filters and Cookies. Migration to Servlet 3.x plus and omission of web.xml and concept of Web Socket.

Module VI: Persistence: JDBC 3.x framework: [6L]

Need and different approaches of persistence of data, Connecting to databases using jdbc:odbc bridge and Type-4 drivers, Executing basic CRUD using JDBC: Statement, Prepared Statement, Result Set. Execution of batch SQL, Stored Procedures using Callable Statement, Transaction Failure management: Save Point and roll back concepts, Prevention of SQL injection, Concept of connection URL in details: Connecting to a remote database host (server). Concept of roles of Drivers: Java reflection in Action.

Module VII: Java Server Pages: [6L]

Benefits of JSP over Servlets, JSP scriptlets, page directives, declarations, action tags: <jsp:useBean/>, <jsp:include/> <jsp:forward/> , introduction to MVC and Spring MVC

Module VIII: XML Technologies: [2L]

XML, Namespace, DTD, W3C XML Schema

Module IX: Ajax: [2L]

Introduction to Asynchronous pattern and Using XML to communicate over XML Http Request object. Handling 5 states and finding response state. Migration of Ajax to AJAX

Module X: Web Service: [2L]

Introduction to web service architecture. Simple object access protocol, Web service description language, RESTful web service.

Text Book:

1. Professional Java Server Programming Allamaraju, Apress

Reference Book:

1. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.
2. Web Technologies Black Book: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Kogent Learning Solutions INC.

Course Name: Computer Networking

Course Code: IT 603

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Basic Digital Communication, Computer Architecture and Operating System.

Course Objective:

Understanding the basic concept of different network models, explaining the network architecture, Analyzing and evaluating different network protocols.

Course Outcome

After completion of this course student will be able to

CO1:	Illustrate the network model and architecture
CO2:	Apply different networking protocol for problem solving
CO3:	Analyse different networking features for devising optimal solution
CO4:	Evaluate routing algorithms for implementing solution for the real-life problems
CO5:	Design real network architecture

Course Content:

Module I: Overview of Data Communication and Networking: [4L]

Introduction; Data communications: components, data representation (ASCII, ISO etc.), direction of data flow (simplex, half duplex, full duplex); network criteria, physical structure (type of connection, topology), categories of network (LAN, MAN, WAN); Internet: brief history, Protocols and standards; Reference models: OSI and TCP/IP.

Module II: Physical Layer: [5L]

Overview of data, signal, transmission & transmission media; Circuit switching: time division & space division switch, TDM bus; Telephone Network.

Module III: Data link Layer: [8L]

Types of errors, framing, error detection & correction methods; Flow control; Protocols: Stop & wait ARQ, GoBack-N ARQ, Selective repeat ARQ, HDLC; Point to Point Protocol, LCP, NCP, Token Ring; Reservation, Polling, Multiple access protocols: Pure ALOHA, Slotted ALOHA, CSMA, CSMA/CD, CSMA/CA Traditional Ethernet, fast Ethernet,

Module IV: Network layer: [7L]

Internetworking & devices: Repeaters, Hubs, Bridges, Switches, Router, Gateway; Addressing: IP addressing, subnetting; Routing: techniques, Routing Protocols, ARP, IP, ICMP, IPV6.

Module V: Transport layer: [6L]

Process to Process delivery; UDP; TCP; Congestion Control: Open Loop, Closed Loop choke packets; Quality of service: techniques to improve QoS: Leaky bucket algorithm, Token bucket algorithm.

Module VI: Application Layer: [6L]

DNS, SMTP, SNMP, FTP, HTTPS, Firewalls, IP Filtering

Text Books:

Course Name: E-Commerce and ERP

Course Code: IT 604A

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Concepts of Computer Networking, Operating System, Database Management System

Course Objective:

The objective of the course is to explain the characteristics and functions of electronic commerce including mobile commerce, fundamental characteristics of electronic markets, common business models used in B2C and B2B electronic commerce. To acquire an overview to ERP and the knowledge on related technologies. Skill to ERP Manufacturing Perspective and ERP modules and to examine ERP tools and understand the benefits of ERP.

Course Outcome

After completion of this course student will be able to

CO1:	Understand the policy issues related to privacy, intellectual property rights, and establishing identity those are germane to electronic commerce along with the Internet and related technologies.
CO2:	Apply the underlying economic mechanisms and driving forces of E-Commerce.
CO3:	Analyze the impact that electronic commerce is facing and outlines the different digital transaction process and basic concepts of e-commerce.
CO4:	Evaluate the importance of digital library and specify the development of electronic commerce capabilities in a company.

Course Contents:

Module I: Introduction to E-Commerce: [2L]

Definition, Scope of E-Commerce, Hardware requirements, E-Commerce and Trade Cycle, Electronic Markets, Electronic Data Interchange and Internet Commerce.

Module II: Business to Business E-Commerce: [4L]

Electronic Markets, Electronic Data Interchange (EDI): Technology, Standards (UN/EDIFACT), Communications, Implementations, Agreements, Security, EDI and Business, Inter-Organizational E-commerce. Business models for E-commerce, Business Process Re-Engineering.

Module III: Legal issues: [3L]

Risks: Paper Document vs. Electronic document, Authentication of Electronic document, Laws, Legal issues for Internet Commerce: Trademarks and Domain names, Copyright, Jurisdiction issues, Service provider liability, Enforceable online contract.

Module IV: Security Issues :[5L]

Security Solutions: Symmetric and Asymmetric Cryptosystems, RSA, DES, and Digital Signature, Protocols for secure messaging, Secure Electronic Transaction (SET) Protocol, Electronic cash over internet, Internet Security, Search engines, Intelligent agents in E-Commerce Electronic payment systems, E-security.

Module V: Business to Consumer E-Commerce and E-Business: [5L]

Consumer trade transaction, Web metrics, Elements of E-Commerce, Industry impacts of E-business. Integrating Intranet and internet web applications across multiple networks. Internet bookshops, Software supplies and support, Electronic Newspapers, Internet Banking, Virtual Auctions, Online Share Dealing, Gambling on the net, E-Diversity, Case studies through internet.

Module VI: Mobile Commerce: [2L]

Overview, Infrastructure, Applications, Mobile Payment, Limitations, Security in M-Commerce.

Module VII: Information Technology and ERP Systems [9L]

The evolution of ERP systems architecture: Client-Server based architecture, Multi-Tier architecture – Presentation layer, Application layer, and Database layer. Brief discussion on Extended ERP systems - Web-enabled ERP architecture, Service- Oriented Architecture and Cloud Computing. Open Source ERP. ERP and Supply Chain Management, and Customer Relationship Management, ERP and Business Intelligence, ERP and Data warehousing, ERP and E-business.

Module VIII: Emerging Trends and Future of ERP Systems: [6L]

Emerging Technologies and ERP: Service-oriented Architecture: Enterprise SOA layers – Business processes, Business services, Components and Integration services, Difference between multi-layered Client-server architecture and SOA. Enterprise Application Integration: Basic understanding of the concept, Types of EAI – User Interface, Method, Application Interface, Data.

Text Books:

- 1.E-Commerce-Strategy, Technologies & Applications by David Whitley, TMH
2. Handbook on Electronic Commerce, Shaw et al., Springer publication.

Course Name: Digital Image Processing

Course Code: IT 604B

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Mathematics, Computer Programming

Course Objective:

The aim of this course is to introduce to the students the basics of digital image processing. The students will gain overview about the available techniques and possibilities of this field. They will learn basic image transformation, segmentation algorithms and problems of object measurements.

Course Outcome:

After completion of this course students will be able to

CO1:	Understand the fundamental concepts of a digital image processing system
CO2:	Identify images in the spatial as well as frequency domain using various transformation techniques for improving the image quality
CO3:	Analyze various compression techniques.
CO4:	Evaluate image segmentation and representation techniques.

Course Contents:

Module I: Introduction to Digital Image Processing: [3L]

Elements of digital image processing systems, Elements of visual perception Brightness, contrast, hue, saturation, mach band effect, Image sampling and quantization.

Module II: Image Enhancement: [8L]

Spatial Basic grey level transformation, Histogram equalization, Histogram specification techniques, Noise Distributions, Image subtraction and Image averaging, Smoothing, sharpening filters, Frequency Domain methods: Introduction to Fourier Transform and DFT, Discrete Cosine Transform (DCT) and its properties, Smoothing in Frequency- Domain, Sharpening in Frequency-Domain, Homomorphic filtering.

Module III: Image Restoration: [5L]

Model of Image Degradation/restoration process, Noise models, Unconstrained restoration, Lagrange multiplier, Least mean square filtering, Constrained least mean square filtering, Wiener filtering.

Module IV: Color Image Processing: [3L]

Different color Models, Color Transformations, Smoothing & Sharpening Color Image, Color Segmentation, Noise.

Module V: Image Compression: [6L]

Need for data compression, Different types of compression, Variable length coding-Huffman Coding, Run Length Encoding, Arithmetic coding, Lossy Compression: Vector Quantization, Transform coding, Basics of Image compression standards: JPEG.

Module VI: Image Segmentation: [6L]

Thresholding, Region Based segmentation, Region growing, Region splitting and Merging, Edge detection, Canny edge detector.

Module VII: Image registration: [3L]

Geometric transformations: translation, rotation, scaling, homomorphic coordinate system; ground control points, affine transformation.

Module VIII: Representation & Description: [2L]

Representation of segmented image, Boundary & Regional Descriptors, Use of Principal components for description.

Text Books:

1. Digital Image Processing by Woods, Gonzalves, Pearson
2. Digital Image Processing & Analysis by Chanda & Majumder, PHI

Course Name: Soft Computing

Course Code: IT 604C

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Mathematics, Set theory.

Course Objective:

To give students knowledge of soft computing theories fundamentals, that is of fundamentals of non-traditional technologies and approaches to solving hard real-world problems, namely of fundamentals of artificial neural networks, fuzzy sets, fuzzy logic and genetic algorithms.

Course Outcome

After completion of this course student will be able to

CO1:	Understand the basics of various soft computing techniques.
CO2:	Apply different soft computing techniques like Genetic Algorithms, Fuzzy Logic, Neural Networks and their combination.
CO3:	Analyze the applications of various soft computing techniques.
CO4:	Evaluate and create soft computing techniques to solve engineering or real-life problems.

Course Content:

Module I: Introduction : [4L]

Soft Computing. Difference between Hard and Soft computing, Requirement of Soft Computing, Major Areas of Soft Computing, Applications of Soft Computing.

Module II: Fuzzy Systems : [9L]

Fuzzy Set theory, Fuzzy versus Crisp set, Fuzzy Relation, Fuzzification, Min-max Composition, Defuzzification Method, Fuzzy Logic, Fuzzy Rule based systems, Fuzzy Decision Making, Fuzzy Control Systems, Fuzzy Classification.

Module III: Genetic Algorithm: [8L]

History of Genetic Algorithms (GA), Working Principle, Various Encoding methods, Fitness function, GA Operators- Reproduction, Crossover, Mutation, Convergence of GA, Bit wise operation in GA, Multi-level Optimization.

Module IV: Neural Networks : [8L]

Neural Network, Learning rules and various activation functions, Single layer Perceptrons , Back Propagation networks, Architecture of Back propagation(BP) Networks, Back propagation Learning, Variation of Standard Back propagation Neural Network, Introduction to Associative Memory, Adaptive Resonance theory and Self Organizing Map, Recent Applications.

Module V: Multi-objective Optimization Problem Solving : [4L]

Concept of multi-objective optimization problems (MOOPs) and issues of solving them. Multi-Objective Evolutionary Algorithm (MOEA), some applications with MOEA.

Module VI: Hybrid Systems: [3L]

Introduction to Hybrid Systems, Neuro Fuzzy Hybrid Systems, Neuro-Genetic Hybrid Systems, Fuzzy-Genetic Hybrid Systems.

Text Books:

1. Fuzzy Logic with Engineering Applications, Timothy J. Ross, Willey.
2. Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis & Applications, S.Rajasekaran, G. A. Vijayalakshami, PHI.
3. Genetic Algorithms: Search and Optimization, E. Goldberg

Reference Books:

1. Neuro-Fuzzy Systems, Chin Teng Lin, C. S. George Lee PHI.
2. Elements of Artificial Neural Network, Kishan Mehrotra, MIT Press.
3. An Introduction to Genetic Algorithms, Melanie Mitchell, MIT Press.

Course Name: Database Management System Lab**Course Code: IT 691****Contact: 0:0:3****Credits: 1.5****Perquisite:**

Knowledge about the basics of electronics and basic concepts in logic design, basic knowledge of data structure and programming concept.

Course Objective:

To develop conceptual understanding of database management system for solving different industry level problems & to learn its applications

Course Outcome:

After completion of this course student will be able to

CO1:	Applying SQL and PL/SQL for processing database
CO2:	Analyze the database using queries to retrieve records
CO3:	Develop solutions using database concepts for real time requirements.

List of Experiments:

1. Study of Backend Tool – Oracle.
2. Data Definition Language (DDL) commands in RDBMS.
3. Data Manipulation Language (DML) and Data Control Language (DCL) commands in RDBMS.
4. High-level language extension with Cursors.
5. High level language extension with Triggers
6. Procedures and Functions.
7. Embedded SQL.
8. Database design using E-R model and Normalization.
9. Mini project (Application Development using Oracle and Visual Basic)
 - i. Inventory Control System.
 - ii. Material Requirement Processing
 - iii. Hospital Management System
 - iv. Railway Reservation System
 - v. Personal Information System
 - vi. Web Based User Identification System
 - vii. Time-table Management System

Basic knowledge on Java and computer networking and database.

Course Objective:

Describing the web application architecture and protocols; Illustrating different technologies those are used to develop web applications; Describing different frameworks those used to develop web applications.

Course Outcome:

At the end of the course students will be able to

CO1:	Apply the concept of web technology in designing solution
CO2:	Analyze different features of web technology for best suitable solution providing
CO3:	Evaluate different web application solution applying the concept of different front end and back end technologies
CO4:	Create web application solution for different problems

List of Experiments:

HTML

Developing application using different HTML elements, designing forms using HTML, Apply DOM

CSS

Using different CSS Styles for designing interactive forms and interfaces.

Java Script

Using Java script variables, operators, control structure, functions and event handling, Form validation using java script, Node js server implementation, express js for implementing web application handling get, put, post, etc.

JDBC

Connecting to databases using jdbc:odbc bridge and Type-4 drivers, Batch execution, Stored Procedure

Servlet

Developing web application using servlet: get/post, Developing filter application, Session handling.

JSP

Developing web application using JSP as view, Session handling using JSP, Using JSP components, Custom tag development.

AJAX

Developing web application using AJAX: accessing XML, text files.

Web Service

Development web service as reusable components

Innovative Experiments

Develop some innovative experiments.

Text Book:

1. Professional Java Server Programming Allamaraju, aprerss

Reference Book:

1. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.
2. Web Technologies Black Book: HTML, JavaScript, PHP, Java, JSP, XML and AJAX, Kogent Learning Solutions INC.

Course Name: Computer Networking Lab**Course Code: IT 693****Contact: 0:0:3****Credits: 1.5****Prerequisite:**

Basic Computer Architecture and Operating System.

Course Objective:

Understanding the basic concept of different network models, Explaining the network architecture, Apply different computer routing algorithms in real life problems.

Course Outcome

After completion of this course student will be able to

CO1:	Apply the concept of networking for implementing the solution.
CO2:	Analyze different networking protocols for optimal solution.
CO3:	Develop solutions for real time requirements.

List of Experiments:

- Familiarization with: Different networking cables, Different connectors, Hubs, Switches, Routers
- NIC Installation & Configuration (Windows/Linux)
- Understanding IP address, subnet etc, Connect the computers in Local Area Network.
- Study of basic Network Configuration commands.
- Configure a Network topology using packet tracer software
- Link Layer Error Detection Mechanism (Cyclic Redundancy Check), Data Link Layer Error Control mechanism (Selective Repeat, Go Back N)
- Implementation of Data Link Layer Flow Control Mechanism (Stop & Wait, Sliding Window), Data
- Server Setup/Configuration: FTP, TELNET, NFS, DNS, Firewall.
- TCP/UDP Socket Programming: Simple, TCP based, UDP based Multicast & Broadcast Sockets

Course Name: E-Commerce and ERP Lab

Course Code: IT 694A

Contact: 0:0:3

Credits: 1.5

Prerequisite:

Object Oriented Programming, Computer Networking, Web Application Development, Database Management System.

Course Objective:

Understanding basic concept of object-oriented programming and PHP framework, Explaining the client-side components, Applying the Php web application development concept in web application development.

Course Outcome

After completion of this course student will be able to

CO1:	Apply the concept for developing MVC application and describe and differentiate different Web Extensions and Web Services.
CO2:	Analyzing different client and server side components for developing application and build dynamic web site using server side PHP programming and database connectivity
CO3:	Implement the solution to real life problem using PHP concepts and Demonstrate web application using Python web Framework.

Course Content:

Introduction to PHP:

Evaluation of PHP, Basic syntax, Variable constant, Data Types, control structure, function, array, string.

Web Designing:

Introduction to HTML HTML Tags Creating Forms Creating tables Managing home page, Java Script, CSS.

Database Connectivity with MySQL:

Introduction to RDBMS Connection with MySql Database Performing basic database operation (DML) (Insert, Delete, Update, Select) Setting query parameter Executing query Join (Cross joins, Inner joins, Outer Joins, Self joins.)

E-Commerce/M-Commerce Applications:

Online Store, Online Banking, Credit Card Transaction Processing. Comparison Shopping in B2C, Exchanges Handling in B2B, Interaction Examples: Virtual Shopping Carts.

Text Books:

1. PHP Complete Reference Steven Holzner

Reference Books:

Course Name: Digital Image Processing Lab**Course Code: IT 694B****Contact: 0:0:3****Credits: 1.5****Prerequisite:**

Knowledge on Computer Programming, Basic knowledge on different image processing operations

Course Objective:

The aim of this course is to familiarize the students in the regular Image Processing Software with respect to basic processing required to generate thematic maps from different sources of images.

Course Outcome:

After completion of this course students will be able to

CO1:	Apply enhancing operations on the image using spatial filters and frequency domain filters.
CO2:	Analyse the characteristics of the image using different transformation techniques.
CO3:	Estimate the efficiency of the compression techniques on the images.
CO4:	Plan different segmentation operations of images.

List of Experiments:

Simulation using MATLAB

1. Image sampling and quantization
2. Analysis of spatial and intensity resolution of images.
3. Intensity transformation of images.
4. DFT analysis of images
5. Different types of Transforms
6. Histogram Processing
7. Image Enhancement-Spatial filtering
8. Image Enhancement- Filtering in frequency domain
9. Image segmentation – Edge detection, line detection and point detection.
10. Region based Segmentation
11. Analysis of images with different color models.
12. Image compression techniques
13. Image restoration
14. A mini project based on medical image processing.

Course Name: Soft Computing Lab

Course Code: IT 694C

Contact: 0:0:3

Credits: 1.5

Prerequisite:

Mathematics - probability, set theory and basic computation and programming.

Course Objective:

To give students knowledge of soft computing theories fundamentals, that is of fundamentals of non-traditional technologies and approaches to solving hard real-world problems, namely of fundamentals of artificial neural networks, fuzzy sets, fuzzy logic and genetic algorithms.

Course Outcome

After completion of this course student will be able to

CO1:	Apply different soft computing techniques like Genetic Algorithms, Fuzzy Logic, Neural Networks and their combination.
CO2:	Analyze and implement real life problems based on soft computing techniques.
CO3:	Evaluate and create soft computing model to solve real life problems of the society.

List of Experiments:

- 1) Overview of Matrix, Matrix Operations, Giving input to Matrix, Displaying elements of Matrix.
- 2) Performing Operations on Matrix like Addition, Subtraction, and Multiplication.
- 3) Performing Transpose Operations on Matrix.
- 4) Plotting of mathematical functions like $\log(x)$, $\sin(x)$, $\cos(x)$. etc
- 5) Write a Program in MATLAB/Python to check whether a number is even or odd
- 6) Write a program in MATLAB/Python to find out the sum of "N" natural numbers.
- 7) Write a Program in MATLAB/Python to generate the fibonacci series upto N , where N is the desired value input by user
- 8) Write a MATLAB/Python program to solve MATRIX based problems.
- 9) Write a MATLAB/Python Program to implement LMS Learning rule.
- 10) Write a MATLAB/Python program to verify McCulloch OR Function.
- 11) Write a MATLAB/Python program to verify Hebb's Rule.
- 12) Write a MATLAB/Python program to implement various Fuzzy Operations. (Eg Union , Intersection , Complement, XOR Operation) For two Fuzzy Set
 $P = (0.3/a) + (0.9/b) + (1.0/c) + (0.7/d) + (0.5/e) + (0.4/f) + (0.6/g)$
 $Q = (1/a) + (1/b) + (0.5/c) + (0.2/d) + (0.2/e) + (0.1/f) + (0.4/g)$
- 13) Write a MATLAB/Python program to implement Max-Min Composition
 For Two Fuzzy sets
 $P = [0.3 \ 0.7 \ 0.9 \ 0.4 \ 0.2 \ 0.5]$
 $Q = [0.4 \ 0.1 \ 0.8 \ 0.3 \ 0.7 \ 0.6]$
- 14) Implementation of Union , Intersection , Complement , XOR Operation and Demorgan's Law
- 15) Write a MATLAB/Python program to implement MAX Composition for the two set of Matrix

$$S = [0.3 \ 0.7; 0.9 \ 0.4; 0.2 \ 0.5]$$

$$R = [0.4 \ 0.1 \ 0.8; 0.3 \ 0.7 \ 0.6]$$

16) Write a MATLAB/Python program to implement Defuzzification of α -cut method

For the following fuzzy set

$$F = (0.6/a) + (0.3/b) + (0.7/c) + (1.0/d).$$

Text Books:

*Students may choose either to work on participation in Hackathons etc. Development of new product/ Business Plan/ registration of start-up. Students may choose to undergo Internship / Innovation / Entrepreneurship related activities. Students may choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with industry/ NGO's/ Government organizations/ Micro/ Small/ Medium enterprises to make themselves ready for the industry/ Long Term goals under rural Internship. (Duration 4-6 weeks) Innovative activities to be evaluated by the Programme Head / Event Coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

Course Name: Cloud Computing

Course Code: IT701A

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Networking, Operating System, Web Technology.

Course Objectives:

The objective of the course is to learn and understand Cloud computing in details and identify the usage of it.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic architecture of cloud computing
CO2:	Apply the knowledge of cloud computing in the evaluation of the computing model.
CO3:	Analyze different features of Cloud Computing
CO4:	Evaluate the different models and solutions provided in the field of cloud computing.
CO5:	Design different solution with different services in cloud computing

Course Content:

Overview of Computing Paradigm [3L]

Recent trends in Computing Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing Evolution of cloud computing Business driver for adopting cloud computing.

Introduction to Cloud Computing [3L]

Cloud Computing (NIST Model) Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers Properties, Characteristics and Disadvantages Pros and Cons of Cloud Computing, Benefits of Cloud Computing, Cloud computing vs. Cluster computing vs. Grid computing

Cloud Computing Architecture and Services [4L]

Cloud computing stack Comparison with traditional computing architecture (client/server), Services provided at various levels, Role of Networks in Cloud computing, protocols used, Role of Web services Service Models (XaaS) Infrastructure as a Service (IaaS) Platform as a Service (PaaS) Software as a Service(SaaS) Deployment Models Public cloud Private cloud Hybrid cloud Community cloud.

Virtualization [5L]

Introduction to virtualization, Different approaches to virtualization, Hypervisors, Machine Image, Virtual Machine (VM) Resource Virtualization Server,

Basics of VMWare, advantages of VMware virtualization,-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine, starting and stopping a virtual machine.

Cloud Storage Management [2L]

Storage as a service, Data storage in cloud computing (storage as a service)

Service Oriented Architecture [5L]

Web Services and Primitive SOA: The Web services framework- Services, Service descriptions, messaging with SOAP. Message exchange patterns- Service activity coordination-Atomic transactions- Business activities-Orchestration-Choreography, Service-Oriented Design Introduction to service-oriented design- WSDL-related XML Schema language basics- WSDL language basics-SOAP language basics- Service interface, design tools. WS-BPEL language basics WS Coordination

Service Management in Cloud Computing [5L]

Service Level Agreements (SLAs) Billing And Accounting Comparing Scaling Hardware: Traditional vs. Cloud Economics of scaling: Benefitting enormously Managing Data Looking at Data, Scalability And Cloud Services Database And Data Stores in Cloud Large Scale Data Processing.

Cloud Security [5L]

Infrastructure Security Network level security, Host level security, Application-level security Data security, Identity And Access Management Access Control Trust, Reputation, Risk Authentication in cloud computing,

Case Study on Open Source and Commercial Clouds [4L]

Google Cloud Microsoft Azure Amazon EC2

Course Name: Computer Graphics and Multimedia

Course Code: IT701B

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Computer Programming, Mathematics

Course Objectives:

The objective of the course is to provide comprehensive introduction about computer graphics system, design algorithms and two-dimensional transformations; to make the students familiar with techniques of clipping, three-dimensional graphics and three-dimensional transformations and become familiar with various software programs used in the creation and implementation of multimedia and to gain knowledge about hardware devices and software used.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic computer graphics and Identify different media representations of different multimedia data and data formats, windows, clipping and view-ports object representation.
CO2:	Comprehend the concept of geometric, mathematical and algorithmic concepts necessary for programming computer graphics.
CO3:	Differentiate windows, clipping and view-ports object representation in relation to images displayed on screen.
CO4:	Distinguish different coding technique and software tools for solving real world problems related to graphics and multimedia.

Course Content:

OVERVIEW OF COMPUTING PARADIGM [3L]

Recent trends in Computing Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing Evolution of cloud computing Business driver for adopting cloud computing.

TWO-DIMENSIONAL GRAPHICS [7L]

Two dimensional geometric transformations, Matrix representations and homogeneous coordinates, composite transformations, Two dimensional viewing, viewing pipeline, viewing coordinate reference frame, window-to-viewport coordinate transformation, Two dimensional viewing functions, clipping operations, point, line, and polygon clipping algorithms.

ILLUMINATION AND COLOR MODELS [7L]

Height sources, basic illumination models, halftone patterns and dithering techniques, Intuitive colour concepts, RGB colour model, YIQ colour model, CMY colour model, HSV colour model, HLS colour model, colour selection. Output primitives, points and lines, line drawing algorithms, loading

the frame buffer, line function; circle and ellipse generating algorithms, Pixel addressing and object geometry.

THREE-DIMENSIONAL GRAPHICS [7L]

Three dimensional concepts, Three dimensional object representations, Polygon surfaces, Polygon tables, Plane equations, Polygon meshes, Curved Lines and surfaces, Spline representations, Bezier curves and surfaces, B-Spline curves and surfaces. TRANSFORMATION AND VIEWING: Three dimensional geometric and modelling transformations, Translation, Rotation, Scaling; Three-dimensional viewing – viewing pipeline, viewing coordinates, Projections, Clipping.

MULTIMEDIA SYSTEM DESIGN & MULTIMEDIA FILE HANDLING [6L]

Multimedia basics, Multimedia applications, Multimedia system architecture, evolving technologies for multimedia, Defining objects for multimedia systems, Multimedia data interface standards, Multimedia databases. Compression and decompression, Data and file format standards, Multimedia I/O technologies, Digital voice and audio, Video image and animation, Full motion video, Storage and retrieval technologies.

HYPERMEDIA [6L]

Multimedia authoring and user interface, Hypermedia messaging, Mobile messaging, Hypermedia message component, Creating hypermedia message, Integrated multimedia message standards, Integrated document management, Distributed multimedia systems.

Course Name: Distributed System

Course Code: IT701C

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisites:

Operating System, Computer Networking

Course Objectives:

This course introduces the fundamentals of distributed computer systems, assuming the availability of facilities for data transmission.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the knowledge of the basic elements and concepts related to distributed system technologies for identify core architectural aspects of distributed systems
CO2:	Use and apply important methods in distributed systems to support scalability and fault tolerance
CO3:	Analyse the utility of main underlying components of distributed systems
CO4:	Build a distributed system by using the required components

Course Content:

Introduction to distributed Systems: [2L]

Definition and goals, Hardware and Software concepts, Design issues

Communication in Distributed System: [4L]

Computer Network and Layered protocols, Message passing and related issues, synchronization, Client Server model & its implementation, remote procedure call and implementation issues, Case Studies: SUN RPC, DEC RPC

Synchronization in Distributed Systems: [4L]

Clock synchronization and related algorithms, mutual exclusion, Deadlock in distributed systems

Processes and Processors in Distributed Systems: [3L]

Threads, system model, processor allocation, scheduling in distributed systems: Load balancing and sharing approach, fault tolerance, Real time distributed systems, Process migration and related issues.

Distributed File Systems:[4L]

Introduction, features & goal of distributed file system, file models, file accessing models, file sharing semantics, file caching scheme, file replication, fault tolerance, trends in distributed file system, case study

Distributed Shared Memory: [5L]

Introduction, general architecture of DSM systems, design and implementation issues of DSM, granularity, structure of shared memory space, consistency models, replacement strategy, thrashing.

Naming: [4L]

Overview, Features, Basic concepts, System oriented names, Object locating mechanisms, Issues in designing human oriented names, Name caches, Naming and security, DNS.

Distributed Web-based Systems: [3L]

Architecture, Processes, Communication, Naming, Synchronization, Consistency and Replication: Web Proxy Caching, Replication for Web Hosting Systems, Replication of Web Applications

Security: [3L]

Introduction of Security in Distributed OS, Overview of security techniques, features, Need, Access Control, Security Management

Case Study: [3L]

Oracle Network File System, Google case study

Course Name: Machine Learning

Course Code: IT701D

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Probability, Linear Algebra, Multivariable Calculus, Programming

Course Objectives:

This introductory course gives basic concepts, techniques, and algorithms in machine learning related to classification and regression problems. The course will give the student the basic ideas and intuition behind modern machine learning methods as well as a bit more formal understanding of how, why, and when they work. The underlying theme in the course is statistical inference as it provides the foundation for most of the methods covered.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basics of machine learning techniques that make it useful to real-world problems.
CO2:	Apply machine learning algorithms such as supervised, semi-supervised, and unsupervised.
CO3:	Analyze various machine learning techniques to investigate real world applications.
CO4:	Evaluate and create model for finding the solution of real world industry issues and problems.

Course Content:

Basics of Linear Algebra [8L]

Introduction to Machine Learning, linear classification, perceptron update rule, Perceptron convergence, generalization, Maximum margin classification, Classification errors, regularization.

Logistic regression [9L]

Linear regression, estimator bias and variance, active learning, Active learning, non-linear predictions, Regression/Classification Basic methods: Distance-based methods, Nearest Neighbors, Decision Trees, Kernel regression, kernel optimization, Model selection criteria, Description length, feature selection, expectation maximization.

Classification [10L]

Classification problems; decision boundaries; nearest neighbor methods, Probability and classification, Naive Bayes, Bayes' Rule and Naive Bayes Model, Hidden Markov models (HMMs), Bayesian networks, Learning Bayesian networks, Logistic regression, online gradient descent, neural network, support vector machine (SVM), kernel ridge regression.

Ensemble methods [9L]

Bagging, random forests, boosting, Unsupervised learning: clustering, k-means, hierarchical agglomeration, Advanced discussion on clustering, Latent space methods; PCA, Text representations; multinomial models; clustering and latent space models.

Course Name: Cryptography and Network Security

Course Code: IT702A

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisite:

Mathematics, Computer Networking,

Course Objective:

The objective of the course is to study the about how to maintain the Confidentiality, Integrity and Availability and Authenticity of the data over insecure channel by various means and to understand various protocols for network security to protect against the threats in the networks.

Course Outcome:

After completion of this course student will be able to

CO1:	Identify computer and network security threats, classify the threats, and understand different technique of cryptography and security.
CO2:	Apply different algorithm and technique of encryption and decryption method over information and security techniques to the existing computer and network platforms.
CO3:	Analyze existing cryptographic algorithm, authentication, and key agreement protocols; identify the strength and weaknesses of existing algorithm.
CO4:	Design and develop cryptography algorithm and network technique security product or code, investigate the strong and weak points of the product or code.

Course Content:

Module 1: [4L]

Attacks on Computers & Computer Security Introduction, Need for Security, Security approaches, Principles of Security, Types of attack.

Module 2: [7L]

Cryptography: Concepts & Techniques Introduction, Plaintext & Cipher text, Substitution Techniques, Transposition Techniques, Encryption & Decryption, and Symmetric & Asymmetric key Cryptography, Key Range & Key Size

Module 3: [8L]

Symmetric Key Algorithm Introduction, Algorithm types & Modes, Overview of Symmetric Key Cryptography, DES (Data Encryption Standard) algorithm, IDEA (International Data Encryption Algorithm) algorithm, RC5(Rivest Cipher 5) algorithm.

Module 4: [5L]

Asymmetric Key Algorithm, Digital Signature and RSA Introduction, Overview of Asymmetric key Cryptography, RSA algorithm, Digital Signature, Basic concepts of Message Digest and Hash

Function (Algorithms on Message Digest and Hash function not required).

Module 5: [5L]

Internet Security Protocols, User Authentication Basic Concepts, SSL protocol, Authentication Basics, Password, Authentication Token, Certificate based Authentication, Biometric Authentication.

Module 6: [4L]

Electronic Mail Security Basics of mail security, Pretty Good Privacy, S/MIME.

Module7: [3L]

Firewall Introduction, Types of firewall, Firewall Configurations.

Textbooks:

1. Cryptography and Network Security, William Stallings, 2nd Edition, Pearson Education Asia
2. Network Security private communication in a public world, C. Kaufman, R. Perlman and M. Speciner, Pearson
3. Cryptography & Network Security: Atul Kahate, TMH.

Reference Books:

1. Network Security Essentials: Applications and Standards by William Stallings, Pearson
2. Designing Network Security, Merike Kaeo, 2nd Edition, Pearson Books
3. Building Internet Firewalls, Elizabeth D. Zwicky, Simon Cooper, D. Brent Chapman, 2nd Edition
4. Practical Unix & Internet Security, Simson Garfinkel, Gene Spafford, Alan Schwartz, 3rd Edition, Oreilly

Course Name: Data Warehousing and Data Mining

Course Code: IT702B

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisites:

Database Management System, Mathematics

Course Objectives:

The student should be made to be familiar with the concepts of data warehouse and data mining and be acquainted with the tools and techniques used for knowledge discovery in databases.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic concepts of data warehousing and data mining.
CO2:	Apply the various mining algorithms for extract knowledge from data warehouse.
CO3:	Analyze different data warehousing methodologies and data mining algorithms
CO4:	Design a data warehouse

Course Content:

Data Warehousing:[7L]

Data Warehousing Components, Building A Data Warehouse, Mapping The Data Warehouse To A Multiprocessor Architecture, DBMS Schemas For Decision Support, Data Extraction, Cleanup, And Transformation Tools, Metadata.

Business Analysis: [7L]

Reporting And Query Tools And Applications, Tool Categories, The Need For Applications, Cognos Impromptu, Online Analytical Processing (OLAP), Need, Multidimensional Data Model, OLAP Guidelines, Multidimensional Versus Multi-relational OLAP, Categories of Tools, OLAP Tools And The Internet.

Data Mining: [7L]

Introduction, Data Types, Data Mining Functionalities, Interestingness of Patterns, Classification of Data Mining Systems, Data Mining Task Primitives, Integration Of A Data Mining System With A Data Warehouse, Issues, Data Pre-processing.

Association Rule Mining and Classification: [7L]

Mining Frequent Patterns, Associations And Correlations, Mining Methods, Mining Various Kinds Of Association Rules, Correlation Analysis, Constraint Based Association Mining, Classification And Prediction, Basic Concepts, Decision Tree Induction, Bayesian Classification, Rule Based

Classification, Classification By Back Propagation, Support Vector Machines, Associative Classification, Lazy Learners, Other Classification Methods, Prediction.

Clustering and Trends in Data Mining: [7L]

Cluster Analysis, Types Of Data, Categorization Of Major Clustering Methods, K-Means, Partitioning Methods, Hierarchical Methods, Density-Based Methods, Grid Based Methods, Model-Based Clustering Methods, Clustering High Dimensional Data, Constraint, Based Cluster Analysis, Outlier Analysis, Data Mining Applications.

Text Books:

1. Alex Berson And Stephen J.Smith, “Data Warehousing, Data Mining And OLAP”, Tata McGraw – Hill Edition, Thirteenth Reprint 2008.
2. Jiawei Han And Micheline Kamber, “Data Mining Concepts And Techniques”, Third Edition, Elsevier, 2012.

Reference Books:

1. Data Mining, Practical Machine Learning Tools and Techniques, Third Edition; Ian H.
2. Witten, Eibe Frank, Mark A. Hall
3. Data Warehousing, Data Mining, & OLAP – Second Edition by Alex Berson and
4. Stephen J. Smith, TataMcGraw Hill Education
5. Data warehouse Toolkit by Ralph Kimball, Wiley India
6. Data Warehousing in the real world; Anahory; Pearson Education.

Course Name: Advanced Computer Architecture

Course Code: IT702C

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Mathematics, Computer Organization and Architecture

Course Objectives:

The objective of the course is to learn technical competence in computer architecture and performance comparisons of modern and high-performance computer systems

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the cost, performance, Trends in Technology, data flow in arithmetic algorithms and Principles of computer design.
CO2:	Model the architectural features of advanced processors.
CO3:	Analyze the working of pipelining, exploring instruction level parallelism using static, dynamic & advanced techniques of scheduling
CO4:	Explain memory organization and mapping techniques.

Course Content:

Module 1: [7L]

Fundamentals of Computer Design: Review of Fundamentals of CPU, Memory and I/O, Trends in technology, power, energy and cost, Dependability, Performance Evaluation.

Module 2: [8L]

Instruction Level Parallelism: ILP concepts, Pipelining overview, Compiler Techniques for Exposing ILP, Dynamic Branch Prediction, Dynamic Scheduling, Multiple instruction Issue, Hardware Based Speculation, Static scheduling, Multi-threading, Limitations of ILP, Case Studies.

Module 3: [7L]

Data Level Parallelism: Vector architecture, SIMD extensions, Graphics Processing units, Loop level Parallelism.

Module 4: [7L]

Thread Level Parallelism: Symmetric and Distributed Shared Memory Architectures, Performance Issues, Synchronization, Models of Memory Consistency, Case studies: Intel i7 Processor, SMT & CMP Processors

Module 5: [7L]

Memory and I/O: Cache Performance, Reducing Cache Miss Penalty and Miss Rate, Reducing Hit Time, Main Memory and Performance, Memory Technology. Types of Storage Devices, Buses, RAID, Reliability, Availability and Dependability, I/O Performance Measures.

Text Books:

1. Kai Hwang and Faye Briggs, "Computer Architecture and Parallel Processing", Mc Graw-Hill International Edition, 2000.
2. Sima D, Fountain T and Kacsuk P, "Advanced Computer Architectures: A Design Space Approach", Addison Wesley, 2000.

Course Name: Compiler Design

Course Code: IT702D

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Mathematics, Computer Programming and Automata basic concept.

Course Objectives:

To understand the knowledge of parsing, lexical and syntax analysis, Analyze various parsing techniques, code optimization, to learn how the parse trees are generated, errors are handled and code is optimized.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the knowledge of parsing, lexical and syntax analysis.
CO2:	Analyze various parsing techniques, code optimization.
CO3:	Apply the knowledge about the compilers they practically use.
CO4:	Learn how the parse trees are generated, errors are handled and code is optimized.

Course Content:

Introduction to Compilers [3L]

Compilers and translators need of translators, structure of compiler: Phases of compilation and overview, Compiler construction tools

Lexical Analysis (scanner) [5L]

Role of lexical analyzer, design of lexical analyzer, regular expressions, Specification and recognition of tokens, input buffering A language specifying lexical analyzer. Finite automata, conversion from regular expression to finite automata, and vice versa, minimizing number of states of DFA, Implementation of lexical analyzer, scanner generator (lex, flex).

Syntax Analysis (Parser) [9L]

Role of parsers, definition of parsing, Shift- reduce parsing, operator precedence parsing, predictive parsing. Context-free language and grammar, push-down automata, LL(1) grammar and top-down parsing, operator grammar, LR(O), SLR(1), LR(1), LALR(1) grammars and bottom-up parsing, ambiguity and LR parsing, LALR(1) parser generator, Canonical LR parser.

Semantic Analysis [4L]

Attribute grammar, syntax directed definition, evaluation and flow of attribute in a syntax tree.

Symbol Table [6L]

Its structure, symbol attributes and management. Run-time environment: Procedure activation, parameter passing, value return, memory allocation, and scope.

Intermediate Code Generation [5L]

Translation of different language features, different types of intermediate forms. Syntax directed definition, construction of syntax trees, syntax directed translation scheme, and implementation of syntax directed translation, three address code, quadruples and triples.

Code optimization and target code generation [4L]

Code improvement local optimization, global optimization, loop optimization, peep-hole optimization.

Text Books

1. Compilers Principle, Techniques & Tools - Alfred V. AHO, Ravi Sethi & J.D. Ullman; Addison Wesley.
2. Compiler Design by O.G. Kakde, Laxmi Publ.

Course Name: Sensor Network

Course Code: IT703A

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Computer Networking.

Course Objective:

To deal with various types of Sensors & Transducers and their working principle, to deal with some of the miscellaneous transducers, know the overview of different advance sensors.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand and explain common wireless sensor node architectures.
CO2:	Apply the various ad hoc routing protocols and transport layer mechanisms.
CO3:	Analyse the issues of routing in wsn and QoS related performance measurements.
CO4:	Design a wireless sensor network for given sensor data using microcontroller, transceiver, middleware and operating system.

Course Content:

Module I: [12L]

Introduction & Characteristics of Transducers

Introduction to sensors and transducers, Measurement system, Principles of sensing & transduction, Classification of sensors, Static characteristics, Dynamic characteristics: Zero, first order and second order measurement system, Response to impulse, step, ramp and sinusoidal inputs, sensitivity calculation, error estimation.

Resistive Sensing Element

Potentiometer: Loading effect, Strain gauge: theory, types, temperature compensation, applications: force, velocity and torque measurements.

Inductive Sensing Element

Self-inductive transducer, Mutual inductive transducers, Variable Reluctance type, Linear Variable Differential Transformer (LVDT): construction, Characteristic Curve, application: LVDT Accelerometer, LVDT displacement sensors.

Module II: [8L]

Capacitive Sensing Element

Capacitive transducer: Variable Area Type, Variable distance type, Variable Permittivity type, calculation of sensitivities, applications.

Piezoelectric & Piezoresistive Sensing Element

Piezoelectric effects, charge and voltage coefficients, crystal model, materials, natural and synthetic types – their comparison, force and stress sensing, piezoelectric accelerometer, piezoresistive sensor. Tachometers: Stroboscopes, Encoders, seismic accelerometer, Measurement of vibration, Proximity switches, Load cells: pneumatic, piezoelectric, elastic and magneto-elastic types - their mounting.

Module III: [8L]

Optical Sensors

Light Dependent Resistor, Optocoupler, Photodiode, Phototransistor, Photomultiplier tube, solar cell.

Magnetic Sensors

Sensors based on Villari effect for assessment of force, torque, rpm meters, Hall effect and Hall drive, performance characteristics

Radioactive sensors

Gieger counter, proportional counter, Scintillation detection, Ionization chamber.

Module IV: [8L]

Miscellaneous Sensors

IC temperature Sensor, Electrochemical Gas sensors, Fibre optic sensors- Thick film technology- MEMS sensors- Nano sensors- Sensors for intelligent systems- Introduction to Smart sensors and Sensor network.

Text Books:

Course Name: Pattern Recognition

Course Code: IT703B

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Fundamentals of probability, linear algebra and python programming.

Course Objectives:

The objective of this course is to learn the fundamentals of pattern recognition and its relevance to classical and modern problems. The main objective is to be able to identify where, when and how pattern recognition can be applied.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand basic concepts in pattern recognition techniques, feature extraction techniques and representation of patterns in feature space.
CO2:	Apply the various real world applications in pattern recognition techniques.
CO3:	Analyze the application of machine vision, speech recognition and movement recognition used in pattern recognition research.
CO4:	Evaluate and create model for Machine Vision, Speech Recognition, Speaker Identification, and Process Identification.

Course Content:

Introduction to Pattern Recognition [8L]

Basics of Linear Algebra, Probability Theory and Optimization: Vectors, Inner product, Outer product, Inverse of a matrix, Eigenanalysis, Singular value decomposition, Probability distributions – Discrete distributions and Continuous distributions; Independence of events, Conditional probability distribution and Joint probability distribution, Bayes theorem, Unconstrained optimization, Constrained optimization – Lagrangian multiplier method.

Methods for Function Approximation [5L]

Linear models for regression, Parameter estimation methods - Maximum likelihood method and Maximum a posteriori method; Regularization, Ridge regression, Lasso, Bias-Variance decomposition, Bayesian linear regression.

Probabilistic Models for Classification [6L]

Bayesian decision theory, Bayes classifier, Minimum error-rate classification, Normal (Gaussian) density – Discriminant functions, Decision surfaces, Maximum-Likelihood estimation, Maximum a posteriori estimation; Hidden Markov models (HMMs) for sequential pattern classification.

Feature Selection [5L]

Introduction, Pre-processing: Feature Selection Based on Statistical Hypothesis Testing: Hypothesis

Testing Basics. The Receiver Operating Characteristics (ROC) Curve, Scalar Feature Selection, Feature Vector Selection, Suboptimal Searching Techniques, Optimal Feature Generation.

Discriminative Learning Models for Classification [6L]

Logistic regression, Perceptron, Multilayer feed forward neural network, back propagation method; Support vector machine, Decision trees, CART, Bagging, Boosting, Gradient boosting.

Pattern Clustering [6L]

Criterion functions for clustering, Techniques for clustering - K-means clustering, Hierarchical clustering, Density based clustering and Spectral clustering; Cluster validation, Principal component analysis.

Course Name: Internet Technology

Course Code: IT703C

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Networking, Web Application Development

Course Objectives:

Understanding the architecture of enterprise application and developing enterprise applications.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand advanced networking concepts, internet and web application architectures.
CO2:	Apply different advanced routing protocols being used in web application development.
CO3:	Analyze different solution available in the field of networking and web application development.
CO4:	Implement solution for different critical network related issues.

Course Content:

Module 1: An Overview on Internet [2L]

Properties of the Internet, Internet Architecture, Interconnection through IP Gateways or routers, Internet and Intranet.

Module 2: Internet Address: [6L]

Introduction, Universal identifiers, Three primary classes of IP addresses, Classless IP address, Network and Broadcast addresses, Mapping internet addresses to physical addresses (ARP), ARP protocol format, Transport Gateways and subnet addressing, Multicast addressing. IPV6, Conversion from IPV4 to IPV6

Module 3: Internet Protocol: [4L]

The Internet Datagram, Routing direct and indirect delivery, Table driven IP routing, Protocol layering, Reliable stream transport, TCP performance, Bootstrap protocol (BOOTP).

Module 4: Routing: [4L]

The origin of Gateway routing tables, Original Internet Architecture and Cores, Core Gateways, Automatic route propagation, Vector distance (Bellman-Ford), routing, Gateway to Gateway Protocol (GGP), Autonomous system concept, Exterior Gateway Protocol (EGP), Interior Gateway Protocol (RIP, OSPF, HELLO), Routing Information Protocol (RIP), Combining RIP, HELLO, and EGP, Routing with partial information.

Module 5: Internet Servers: [4L]

DNS, DHCP Servers, FTP, TELNET, E-Mail

Module 6: Firewall & Networking [6L]

Introduction, Implementation of Firewall, Activities of Firewall, Configuration of firewall, Firewalls & SSL, SSL implementation, Bit implementation of SSL, Use of SSL.

Module 7: ASP .NET: [10L]

Architecture and Component, Page life cycle, Control: Check Box, Radio Button, List, Label. Session Management, Web Form Handling, Accessing database, Hosting of Web application.

Course Name: Robotics
Course Code: IT703D
Contact: 3:0:0
Total Contact Hours: 35
Credit: 3

Prerequisites:
Mathematics, C/C++.

Course Objectives:

The student should be made to understand the basic concepts associated with the design and Functioning and applications of Robots

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the math and computational methods necessary to model and solve kinematic problems involving robot manipulators and mobile robots.
CO2:	Experiment with the most common robot sensors and understand fundamental sensor processing algorithms and their engineering trade-offs.
CO3:	Analyze the computational challenges inherent in fundamental mobile robotic tasks.
CO4:	Develop simple robot control systems integrating perception, planning, and action.

Course Content:

Module 1: Introduction: [2L]

Brief history of robots, different types, classification and usage of science and technology of robots.

Module 2: Elements of robots – links, joints, actuators, and sensors: [6L]

Position and orientation of a rigid body, Homogeneous transformations, Representation of joints, link representation using D-H parameters, Examples of D-H parameters and link transforms, different kinds of actuators – stepper, DC servo and brushless motors, model of a DC servo motor, Types of transmissions, Purpose of sensors, internal and external sensors, common sensors – encoders, tachometers, strain gauge-based force-torque sensors, proximity and distance measuring sensors, and vision.

Module 3: Kinematics of serial and parallel robots: [5L]

Introduction, Direct and inverse kinematics problems, Examples of kinematics of common serial manipulators, workspace of a serial robot, Inverse kinematics of constrained and redundant robots, Degrees-of-freedom of parallel mechanisms and manipulators, Active and passive joints, Constraint and loop-closure equations, Direct kinematics problem, Mobility of parallel manipulators, Inverse kinematics of parallel manipulators and mechanisms, Direct kinematics of Gough-Stewart platform.

Module 4: Velocity and static analysis of robot manipulators: [5L]

Linear and angular velocity of links, Velocity propagation, Manipulator Jacobians for serial and parallel manipulators, Velocity ellipse and ellipsoids, Singularity analysis for serial and parallel

manipulators, Loss and gain of degree of freedom,

Module 5: Dynamics of serial and parallel manipulators: [5L]

Mass and inertia of links, Lagrangian formulation for equations of motion for serial and parallel manipulators, Generation of symbolic equations of motion using a computer, Simulation (direct and inverse) of dynamic equations of motion, Examples of a planar 2R and four-bar mechanism, Recursive dynamics,

Module 6: Motion planning and control: [5L]

Joint and Cartesian space trajectory planning and generation, Classical control concepts using the example of control of a single link, Independent joint PID control, Control of a multi-link manipulator, Non-linear model-based control schemes, Simulation and experimental case studies on serial and parallel manipulators, Control of constrained manipulators, Cartesian control, Force control and hybrid position/force control, Advanced topics in non-linear control of manipulators.

Module 7: Robot Programming: [7L]

Control considerations, Hardware Architecture, Hardware for joint controllers, Computational Speed, Robot Language, Robot Programming.

Text Books:

1. K.S Fu R.C. CSG Lee-Robotics Control, Sensing, Vision & Intelligence, McGraw-Hill.

Reference Books:

2. M.P. Groover, M.Weins, R.N. Nagel, N.C. Odrey –Industrial Robotics, McGraw Hill
3. S. Sitharama Iyengar, Alberto Elfes -Autonomous Mobile Robots Control, Planning & Architecture, IEEE Computer Society Press.

Course Name: Modeling and Simulation

Course Code: IT704A

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisite:

Programming and Data Structures, Discrete Mathematics and Probability, Numerical Analysis, Basic Electronics

Course Objective:

The objective of the course is to conceptualize basics of simulation and modeling by learning system dynamics and probability theory of simulation and discrete simulation system; to enable students to analyze continuous and uniformly distributed random numbers and assess the strengths and weaknesses of various methods for analyzing their behaviors.

Course Outcome

After completion of this course student will be able to

CO1:	Investigate and summarize various issues in modeling and simulation.
CO2:	Apply the knowledge of system dynamics and probability theories in simulation.
CO3:	Demonstrate the ability to simulate a generic system like Queuing Systems
CO4:	Evaluate and analyze various results obtained from the simulation process
CO5:	Identify the application potentials of modeling and simulation, and apply the same knowledge to solve complex problems in various engineering disciplines.

Course Content:

Module 1: Introduction to Modelling and Simulation: [10L]

Nature of Simulation. Systems, Models and Simulation, Continuous and Discrete Systems, system modeling, Components of a simulation study, Introduction to Static and Dynamic System simulation, Application areas, Advantages, Disadvantages and pitfalls of Simulation.

Module 2: System Dynamics & Probability concepts in Simulation: [10L]

Exponential growth and decay models, Generalization of growth models, Discrete and Continuous probability functions, Continuous Uniformly Distributed Random Numbers, Generation of a Random numbers, Generating Discrete distributions, Non-Uniform Continuously Distributed Random Numbers, Rejection Method.

Module 3: Simulation of Queuing Systems and Discrete System Simulation: [10L]

Poisson arrival patterns, Exponential distribution, Service times, Normal Distribution Queuing Disciplines, Simulation of single and two server queue. Application of queuing theory in computer system. Discrete Events, Generation of arrival patterns, Simulation programming tasks, Gathering statistics, Measuring occupancy and Utilization, Recording Distributions and Transit times.

Module 4: Analysis of Simulation output: [5L]

Sensitivity Analysis, Validation of Model Results

Text Books:

1. Geoffrey Gordon, “System Simulation”, PHI.
2. Jerry Banks, John Carson, B.L.Nelson and D.M.Nicol “ Discrete Event System Simulation”, Fifth Edition, Pearson
3. Narsingh Deo, 1979, System Simulation with Digital Computers, PHI.

Course Name: Microelectronics and VLSI Design

Course Code: IT704B

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Digital Electronics, Microprocessor, Computer Architecture.

Course Objectives:

The course is designed to give the student an understanding of the different design steps required to carry out a complete digital VLSI design in silicon.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand of the characteristics of CMOS circuit construction and the comparison between different state-of-the-art CMOS technologies and processes
CO2:	Use mathematical methods and circuit analysis models in analysis of CMOS digital electronics circuits, including logic components and their interconnect
CO3:	Categorize different VLSI Fabrication Process.
CO4:	Complete a significant VLSI design project having a set of objective criteria and design constraints

Course Content:

Introduction to VLSI Design: [10L]

VLSI Design Concepts, Moor's Law, Scale of Integration (SSI, MSI, LSI, VLSI, ULSI – basic idea only), Types of VLSI Chips (Analog & Digital VLSI chips, General purpose, ASIC, PLA, FPGA), Design principles (Digital VLSI – Concept of Regularity, Granularity etc), Design Domains (Behavioral, Structural, Physical), YChart, Digital VLSI Design Steps. MOS structure: E-MOS & D-MOS, Charge inversion in E-MOS, Threshold voltage, Flat-band voltage, Potential balance & Charge balance, Inversion, MOS capacitances.

Micro-electronic Processes for VLSI Fabrication: [10L]

Silicon Semiconductor Technology- An Overview, Wafer processing, Oxidation, Epitaxial deposition, Ion-implantation & Diffusion, Cleaning, Etching, Photo-lithography – Positive & Negative photo-resist Basic CMOS Technology (Steps in fabricating CMOS), Basic n-well CMOS process, p-well CMOS process, Twin tub process, Silicon on insulator Layout Design Rule: Stick diagram with examples, Layout rules.

Three Terminal MOS Structure: [10L]

Body effect. Four Terminal MOS Transistor: Drain current, I-V Characteristics. Current-voltage equations (simple derivation). Scaling in MOSFET: Short Channel Effects, General scaling, Constant Voltage & Field scaling. CMOS: CMOS inverter, Simple Combinational Gates - NAND gate and NOR Gate using CMOS.

Hardware Description Language: [6L]

VHDL or Verilog Combinational & Sequential Logic circuit Design.

Text Books:

1. CMOS Digital Integrated Circuit, S.M.Kang & Y.Leblebici, TMH.
2. Modern VLSI Design, Wayne Wolf, Pearson Education.

Reference Books:

1. Digital Integrated Circuit, J.M.Rabaey, Chandrasan, Nicolic, Pearson Education.
2. Advance Digital Design Using Verilog , Michel D. Celliti, PHI
3. VHDL, Bhaskar, PHI.

Course Name: Mobile Communication

Course Code: IT704C

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Computer Networking, Operating System, Mathematics.

Course Objectives:

The objective of the course is to presents the basic principles of mobile communication systems, analysis the operation of mobile communications system with wireless media and Ad-Hoc network.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic of Mobile Communication system & its generation in wireless network
CO2:	Apply the knowledge to determine the functionalities, techniques, protocols and architecture employed in wireless local area networks, cellular networks, and performs basic requirements analysis.
CO3:	Analyze the network infrastructure requirements to support mobile devices and users.
CO4:	Evaluate the techniques and technologies to design and communicate a simple mobile application for smaller devices.

Course Content:

Overview: [5L]

Introduction to Mobile Communication – Applications of Mobile Communication - Generations of Mobile Communication Technologies-MAC Protocols – SDMA- TDMA- FDMA- CDMA Transmission Medium, Need, Advantages, Disadvantages. Transmission Media, Advantages & Disadvantages.

Global System for Mobile Communication & General Packet Radio Services: [4L]

Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling. GPRS Architecture, GPRS Network Nodes.

Wireless LANs [6L]

Characteristics, IEEE 802.11: Architecture, Physical Layer, MAC Layer, And MAC Management, 802.11a and 802.11b. HIPERLAN: History, WATM, BRAN and HiperLAN2. Bluetooth: Architecture, Radio Layer, Baseband Layer, Link Management Protocol, L2CAP and Security.

Network Layer: [10L]

Introduction, Traditional TCP: Congestion Control, Slow Start, Fast Retransmit and Implications of Mobility. Classical TCP Improvements: Indirect TCP, Snooping TCP, Mobile TCP and Fast

Retransmit. Mobile IP: Introduction, IP Packet Delivery, Agent Discovery, Registration, Tunnelling and Encapsulation, Optimizations and Reverse Tunneling. Mobile Ad-hoc Networks: Routing, Destination Sequence Distance Vector, Dynamic Source Routing and Alternative Metrics.

Cellular Networks: [8]

Cellular Concept, Frequency Reuse, Channel Allocation Management, Call Setup, Location Management, Cell Handoffs, Interference: Co-channel and Adjacent Interference. System Capacity, Improving Cell Capacity and Coverage: Cell Splitting, Sectoring, Repeaters and Microcell Zone Concept

Wireless Application Protocol [3L]

The Mobile Internet standard, WAP Gateway and Protocols,

Text Books:

1. J. Schiller, Mobile Communications, Addison –Wesley, 2003

Reference Books:

1. T. S. Rapport, Wireless Communications, Principle and Practices
2. Forouzan, Data Communications and Networking, TMH

CO3	2	3	3	2	-	-	1	-	-	-	-	1
CO4	2	3	3	3	-	-	1	-	-	-	-	1

Course Name: Operations Research

Course Code: IT704D

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisites:

Basic Knowledge of Function, plotting of Equation and inequations, Formulation of Mathematical Problem.

Course Objectives:

The objective of the course is to develop models and analyze the model using different techniques, decision making under uncertainty and risk.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand knowledge-base representation models.
CO2:	Apply different rule-based expert systems and planning tools.
CO3:	Analyze the performance of rule-based-systems.
CO4:	Develop heuristic search algorithms for real life problem solving.

Course Content:

Module 1: Linear Programming Problem [7L]:

Basics of Linear Programming Problem (LPP) and its Applications. General Mathematical Formulation of LPP; Definitions: Convex set, Solution, Feasible Solution, Basic and Non-Basic Variables, Basic Feasible Solution, Degenerate and Non-Degenerate solution, Optimum/Optimal Solution; Solution of LPP by Graphical Analysis/Method, Simplex Method, Charnes' Big M-Method; Duality Theory.

Module 2: Transportation & Assignment Problem [5L]:

Transportation Problem, Assignment Problem, Travelling Salesman Problem.

Module 3: Network Optimization Models [6L]:

CPM / PERT (Arrow network, Time estimates, earliest expected time, latest allowable occurrence time, latest allowable occurrence time and slack. Critical path, Probability of meeting scheduled date of completion of project, Calculation of CPM network, various floats for activities.

Module 4: Game Theory [6L]:

Introduction, Two person Zero Sum game, Saddle Point; Min-Max and Maxi-Min Theorems (statement only) and problems; Games without Saddle Point; Graphical Method; Principle of

Dominance.

Module 5: Sequencing [4L]:

Two men two machines, Three Men Two Machines.

Module 6: Queuing Theory [7L]:

Introduction and Basic Structure of Queuing Theory; Basic Definitions and Notations. Birth-and-Death Model (Poisson / Exponential distribution); Poisson Queue Models: (M/M/1):(∞ /FIFO) and (M/M/1):(N/FIFO) and Problems. Introduction to Stochastic Processes, Markov Process with Discrete State Space: Poisson Process, Applications in Stochastic Models (Queuing System and Models).

Text Books:

1. Operations Research by Kanti Swaroop and P.K. Man Mohan, Sultan Chand and Sons
2. Linear Programming and Theory of Games by P.M.Karak, ABS Publishing House
3. Operations Research, Kalavati, VIKAS
4. Operations Research, Humdy A Taha, PHI / Pearson
5. Stochastic Processes by J. Medhi, New Age International Publishers.

Reference Books:

1. Operations Research by P.K. Gupta & Hira, S.Chand
2. Operations Research by V.K. Kapoor

Course Name: Cloud Computing Lab

Course Code: IT791A

Contact: 0:0:3

Credit: 1.5

Prerequisites:

Networking, Operating System, Web Technology.

Course Objectives:

The objective of the course is to learn and apply the concept of cloud computing in real world application

Course Outcome:

After completion of this course student will be able to

CO1:	Apply the concept cloud computing to solve practical use cases
CO2:	Analyzing different services in cloud computing
CO3:	Evaluate different available services provided by cloud vendors
CO4:	Design Cloud based application

Course Content:

Module 1: Virtual Machine:

Creation of vpc, vnet, virtual machine, Private and Public IP configuration

Module 2: Application Development:

Implementation of SOAP Web services in JAVA Applications.

Use Azure to launch the web applications. Test Simple Application

Module 3: Security:

Identity and access management, Multifactor Authentication.

Module 4 : Bot and AI service:

Test AWS and AZURE Bot and AI services

Text Books

1. Cloud Computing: Principles, Systems and Applications, Editors: Nikos Antonopoulos, Lee Gillam, Springer, 2012

Reference Books:

Course Name: Computer Graphics and Multimedia Lab

Course Code: IT791B

Contact: 0:0:3

Credit: 1.5

Prerequisites:

Computer Programming, Mathematics

Course Objectives:

The objective of the course is to become familiar with graphics programming and expertise in text, image, audio, video enhancement and manipulation using different software/tools through projects.

Course Outcome:

After completion of this course student will be able to

CO1:	Apply 3D graphical scenes using open graphics library suits.
CO2:	Analyze the effects of scale and use on both presentation and lower-level requirements.
CO3:	Compare interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.
CO4:	Implement image manipulation, enhancement, and basic transformations on objects and clipping algorithm on lines.

Course Content:

Module 1: Computer Graphics

- Implementation of Algorithms for drawing 2D Primitives – Line (DDA, Bresenham) – all slopes, Circle (Midpoint)
- 2D Geometric transformations – Translation, Rotation Scaling , Reflection Shear, Window-Viewport
- Composite 2D Transformations
- Line Clipping
- 3D Transformations - Translation, Rotation, Scaling.
- 3D Projections – Parallel, Perspective.
- Creating 3D Scenes.

Module 2: Multimedia Application

- Image Editing and Manipulation - Basic Operations on image using any image editing software, Creating gif animated images, Image optimization.
- 2D Animation – To create Interactive animation using any authoring tool.
- VLC and Video Streaming
- HTML 5 and media publishing with Projects based learning.
- Web document creation using Dreamweaver.
- Creating Animation using Flash.

Course Name: Distributed System Lab

Course Code: IT791C

Contact: 0:0:3

Credit: 1.5

Prerequisites:

Operating System, Computer Networking

Course Objectives:

This course introduces the fundamentals of distributed computer systems, assuming the availability of facilities for data transmission.

Course Outcome:

After completion of this course student will be able to

CO1:	Use the knowledge of the basic elements and concepts related to distributed system technologies for identify core architectural aspects of distributed systems;
CO2:	Analyse the functions of main underlying components of distributed systems
CO3:	Built a distributed systems to support scalability and fault tolerance;

Course Content:

The following programs may be developed preferably on 'UNIX' platform:-

1. Simulate the functioning of Lamport's Logical Clock in 'C'.
2. Simulate the Distributed Mutual Exclusion in 'C'.
3. Implement a Distributed Chat Server using TCP Sockets in 'C'.
4. Implement RPC mechanism for a file transfer across a network in 'C'
5. Implement 'Java RMI' mechanism for accessing methods of remote systems.
6. Simulate Balanced Sliding Window Protocol in 'C'.

Text Books:

1. Distributed Operating Systems Concepts and Design, Pradeep K. Sinha, PHI
2. Distributed Systems: Concepts and Design by George Coulouris, Jean Dollimore, Tim Kindberg, Pearson

Course Name: Machine Learning using R Programming Lab**Course Code: IT791D****Contact: 0:0:3****Credit: 1.5****Prerequisites:**

Probability, Linear Algebra, Calculus, R/Python Programming.

Course Objectives:

This course provides the knowledge to Install and use R for simple programming tasks, extended R libraries and packages. Which helps to Develop R Programs using Looping Constructs and R mathematical functions that can be used for data exploration in R.

Course Outcome:

After completion of this course student will be able to

CO1:	Apply machine learning algorithms such as supervised, semi-supervised, and unsupervised.
CO2:	Analyze various machine learning techniques to investigate real world applications.
CO3:	Evaluate and create model for finding the solution of real-world industry issues and problems.

Course Content:**Experiments in R and Machine Learning**

1. Write R/python program to calculate the square root of 2345, and perform a log2 transformation on the result.
2. Print the 1 to 10 numbers in reverse order in R programming language.
3. Find 10 random numbers between 0 and 100 in R programming language.
4. Compute the truth table for logical AND in R Programming language.
5. Use R/python to find all the numbers between 1 and n which are multiples of some m.
6. Write a program in R/python to check the leap year or not.
7. Find the Factorial of a given Number in R.
8. Program to check whether the given number is Prime or not in R.
9. Check whether the given number is Arm strong number or not.
10. Program to display multiplication table in R.

11. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
12. Write a program to implement the Naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
13. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
14. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML.

Text Books

1. The Art of R Programming, Norman Matloff, Cengage Learning.
2. R for Everyone, Lander, Pearson.

Course Name: Principles of Management

Course Code: HU804

Contact: 2:0:0

Total Contact Hours: 24

Credit: 2

Course Objectives:

To understand and apply management principles in to manufacturing organization, understand concepts of work study, method study, and Quality control method to improve performance of any organization.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the evolution of Management
CO2:	Apply the functions and principles of management
CO3:	Analyze the application of the principles in an organization
CO4:	Create the effective communication in the organization

Course Content:

Management Concepts [4L]

Definition, roles, functions and importance of Management, Evolution of Management thought-contribution made by Taylor, Fayol, Gilbreth, Elton Mayo, McGregor, Maslow

Planning and Control [4L]

Planning: Nature and importance of planning, -types of planning, Levels of planning - The Planning Process. – MBO, SWOT analysis, McKinsey's 7S Approach. Organising for decision making: Nature of organizing, span of control, Organisational structure –line and staff authority. Control: Basic control process, control as a feedback system, Feed Forward Control, Requirements for effective control

Group dynamics & Leadership [4L]

Group dynamics: Types of groups, characteristics, objectives of Group Dynamics. Leadership: Definition, styles & functions of leadership, qualities for good leadership, Theories of leadership

Work Study and work measurement [4L]:

Definition of work study, Method Study Steps, Tools and Techniques used in the Method Study and Work Measurement Time Study: Aim & Objectives,, Use of stopwatch procedure in making Time Study. Performance rating, allowances and its types. Calculation of Standard Time. Work sampling

Marketing Management [2L]:

Functions of Marketing, Product Planning, and development, Promotional Strategy

Quality management [6L]:

Quality definition, Statistical quality control, acceptance sampling Control Charts –Mean chart, range chart c chart, p chart, np chart, Zero Defects, Quality circles, , Kaizen & Six Sigma, ISO -9000 Implementation steps, Total quality management

Text Books

1. Essentials of Management, by Harold Koontz & Heinz Weihrich Tata McGraw
2. Production and Operations Management-K.Aswathapa, K .Shridhara Bhat, Himalayan Publishing House

Reference Books:

1. Organizational Behavior, by Stephen Robbins Pearson Education, New Delhi
2. New era Management, Daft, 11th Edition, Cengage Learning

Course Name: Blockchain Technology

Course Code: IT801A

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Distributed Systems, Computer Networks, Cryptography, Python Programming Language, and Cloud computing.

Course Objectives:

The objective of the course is to learn and understand Blockchain technology in detail, and identifies the application potentials of this technology.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic concepts of blockchain and it's architectures.
CO2:	Analyze different issues in the domain of blockchain and understand the practical applications of blockchain.
CO3:	Evaluate and analyze different solutions for the real life problems related to the blockchain.
CO4:	Design different solution applying and analyzing concept of Block chain

Course Content:

Centralized versus Distributed Systems [6L]

Client-Server Model, Distributed System, P2P Network Model, Distributed Database, Two General Problem in distributed database, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete.

Security, Trust and Privacy [6L]

Confidentiality; Integrity; Availability; Authentication; Authorization; Access Control; Accounting; Non Repudiation, Symmetric Key and Asymmetric Key Cryptography, Hash function, Merkle tree hash, Digital Signatures – RSA, Schnorr, and ECDSA, Memory Hard Algorithm, Zero Knowledge Proof, User privacy.

Fundamentals of Blockchain [6L]

Introduction, Benefits over traditional distributed database, Blockchain Network, Data structure of block, Block construction and addition, Block mining mechanisms, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain policy, Real-time application of Blockchain, Soft & Hard Fork, Private, Public, and Consortium blockchain.

Consensus algorithms in Blockchain [9L]

Distributed Consensus, Nakamoto consensus, Proof of Work (PoW), Proof of Stake (PoS), Proof of Burn (PoB), Delegated Proof of Stake (DPoS), Byzantine Fault Tolerance (BFT), Practical Byzantine Fault Tolerance (PBFT), Ripple Protocol Consensus Algorithm (RPCA), Difficulty Level, Sybil Attack, Energy utilization and alternate.

Cryptocurrency and Blockchain Applications [9L]

History, Distributed Ledger Technology (DLT), Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contracts and Distributed Applications (Apps), GHOST, Vulnerability, Attacks, Sidechain, Name coin, Stakeholders, Roots of Bitcoin, Legal Aspects - Cryptocurrency Exchange, Black Market and Global Economy, Application of Blockchain in Finance and Banking, Energy trading, Internet of Things (IoV, IoD, IIoT, Smart city, Smart Home, and so on), Medical Record Management System, Real estate business, Entertainment, Future scope of Blockchain.

Text books

1. Roger Wattenhofer, Distributed Ledger Technology: The Science of the Blockchain, Second Edition, 2017.
2. Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction, Princeton University Press, 2016.
3. Andreas M. Antonopoulos, Mastering Bitcoin: Unlocking Digital Cryptocurrencies, O'Reilly Publication House, 2014.

Reference books

1. Melanie Swan Blockchain: Blueprint for a new Economy, O'Reilly Publication House, 2015.
2. Andreas M. Antonopoulos and Dr. Gavin Wood, Mastering Ethereum Building Smart Contracts and Dapps, O'Reilly Publication House, First Edition, 2018.

Course Name: Big Data Analytics

Course Code: IT801B

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisite:

Basic knowledge in data storage and retrieval, Knowledge in Quantitative Aptitude and Statistics, Proficiency in Algorithms and Computer Programming Skills.

Course Objective:

Know the fundamental concepts of big data and analytics, explore tools and practices for working with big data, learn about stream computing.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand basic concepts and requirements of big data analytics
CO2:	Apply the concept of big data analytics to handle huge dataset
CO3:	Analyze big data with different available algorithm and theorem
CO4:	Design and develop different analytical solution organizing huge dataset

Course Content:

Module 1: Introduction To Big Data [6L]

Evolution of Big data - Best Practices for Big data Analytics - Big data characteristics - Validating - The Promotion of the Value of Big Data - Big Data Use Cases- Characteristics of Big Data Applications - Perception and Quantification of Value -Understanding Big Data Storage - A General Overview of High-Performance Architecture - HDFS - MapReduce and YARN - Map Reduce Programming Model

Module 2: Clustering And Classification [8L]

Advanced Analytical Theory and Methods: Overview of Clustering - K-means - Use Cases - Overview of the Method - Determining the Number of Clusters - Diagnostics - Reasons to Choose and Cautions - Classification: Decision Trees - Overview of a Decision Tree - The General Algorithm - Decision Tree Algorithms - Evaluating a Decision Tree - Decision Trees in R - Naïve Bayes - Bayes' Theorem - Naïve Bayes Classifier.

Module 3: Association and Recommendation System [7L]

Advanced Analytical Theory and Methods: Association Rules - Overview - Apriori Algorithm - Evaluation of Candidate Rules - Applications of Association Rules - Finding Association & finding similarity - Recommendation System: Collaborative Recommendation- Content Based Recommendation - Knowledge Based Recommendation- Hybrid Recommendation Approaches.

Module 4: Stream Memory [7L]

Introduction to Streams Concepts – Stream Data Model and Architecture - Stream Computing, Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating moments – Counting oneness in a Window – Decaying Window – Real time Analytics Platform(RTAP) applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions. Using Graph Analytics for Big Data: Graph Analytics

Module 5: Nosql Data Management For Big Data And Visualization [7L]

NoSQL Databases : Schema-less Models: Increasing Flexibility for Data Manipulation-Key Value Stores- Document Stores - Tabular Stores - Object Data Stores - Graph Databases Hive - Sharding — Hbase – Analyzing big data with twitter - Big data for E-Commerce Big data for blogs - Review of Basic Data Analytic Methods using R.

Course Name: Virtual Reality

Course Code: IT801C

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Computer Architecture, Networking, Operating System,

Course Objectives:

This course provides students with an opportunity to explore the research issues in Augmented Reality and Virtual Reality (AR &VR). It also makes the students know the basic concept and framework of virtual reality.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic concept of Virtual Reality
CO2:	Apply the knowledge of virtual reality in the evaluation of different models.
CO3:	Analyze different problems in the domain of Virtual Reality
CO4:	Evaluate the different solutions provided in the field of virtual reality

Course Content:

Module 1: Introduction of Virtual Reality [4L]:

Fundamental Concept and Components of Virtual Reality. Primary Features and Present Development on Virtual Reality.

Module 2: Multiple Models of Input and Output Interface in Virtual Reality [6L]:

Input -- Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3DScanner etc. Output -- Visual /Auditory / Haptic Devices.

Module 3: Visual Computation in Virtual Reality [4L]:

Fundamentals of Computer Graphics. Software and Hardware Technology on Stereoscopic Display. Advanced Techniques in CG: Management of Large Scale Environments & Real Time Rendering.

Module 3: Interactive Techniques in Virtual Reality [4L]:

Body Track, Hand Gesture, 3D Manus, Object Grasp.

Module 5 : Development Tools and Frameworks in Virtual Reality [4L]:

Frameworks of Software Development Tools in VR. X3D Standard; Vega, MultiGen, Virtools etc.

Module 6 : Application of VR in Digital Entertainment [6L]:

VR Technology in Film & TV Production. VR Technology in Physical Exercises and Games. Demonstration of Digital Entertainment by VR.

Module 7: Augmented and Mixed Reality [8L]:

Taxonomy, technology and features of augmented reality, difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, visualization techniques for augmented reality, wireless displays in educational augmented reality applications, mobile projection interfaces, marker-less tracking for augmented reality, enhancing interactivity in AR environments, evaluating AR systems.

Course Name: Natural Language Processing

Course Code: IT801D

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisite:

Mathematics - probability, Python Programming, Formal Language and Automata Theory

Course Objective:

The objective of the course is to learn the basics of Language model, principles of NLP through programming, to build an application using different algorithms and natural language processing techniques.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basics of text processing including basic pre-processing, spelling correction, language modeling, Part-of-Speech tagging, Constituency and Dependency Parsing, Lexical Semantics, distributional Semantics and topic models
CO2:	Apply the text mining such as entity linking, relation extraction, text summarization, text classification, sentiment analysis and opinion mining.
CO3:	Analyze the application of text mining such as entity linking, relation extraction, text summarization, text classification, sentiment analysis and opinion mining
CO4:	Evaluate and create various texts mining model to solve real world tasks using NLP tool kits

Course Content:

Module I: [5L]

Introduction: Basic Text Processing: Tokenization, Stemming, Language Modeling: N-grams, smoothing, Knowledge in Speech and Language Processing, Ambiguity, Models and Algorithms, Language.

Module II: [5L]

Morphology, Parts of Speech Tagging, Word Classes and Part-of –Speech Tagging: English Word Classes, Tag sets for English, Part-of –Speech Tagging, Rule-Based Part-of Speech Tagging, Stochastic Part-of –Speech Tagging, Transformation-Based Tagging, Topic Models, and Distributional Semantics.

Module III: [5L]

Context-Free Grammars for English: Syntax- PCFGs, Dependency Parsing Constituency, Context-Free Rules and Trees, Sentences-Level Constructions, The Noun Phrase, Coordination, Agreement, The Verb Phrase and Sub categorization, Auxiliaries, Spoken Language Syntax, Grammar Equivalence and Normal Form, Finite-State and Context- Free Grammars, Grammars and Human Processing.

Module IV: [5L]

Parsing with Context-Free Grammars: Parsing as Search, a Basic Top-Down Parser, Problems with the Basic Top-Down Parser, the Early Algorithm, and Finite – State Parsing Methods. Lexical Semantics, Word Sense Disambiguation.

Module V: [5L]

Information Extraction: Relation extraction, Text Classification, Sentiment Analysis, Feature Structures, Unification of Features Structures, Features Structures in the Grammar, Implementing Unification, Parsing with Unification Constraints, Types and Inheritance.

Module VI: [5L]

Representing Meaning: Computational Desiderata for Representations, Meaning Structure of Language, First Order Predicate Calculus, and Some Linguistically Relevant Concepts. Semantic Analysis: Syntax-Driven Semantic Analysis, Attachments for a Fragment of English.

Module VII: [6L]

Natural Language Generation: Introduction to Language Generation, Architecture for Generation, Surface Realization, Discourse Planning, Deep Learning for NLP: Basic and Advanced Models; Analysis.

Course Name: Bio-Informatics

Course Code: IT802A

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisites:

Concepts of Computer Networking, Network Security, Database Management Systems

Course Objectives:

The basic objective is to learn about different bio molecules, their structures and functions, various data sets in bioinformatics, computational techniques useful in bioinformatics.

Course Outcome:

After completion of this course student will be able to

CO1:	Acquire the knowledge of Bioinformatics technologies with the related concept of DNA, RNA and their implications
CO2:	Understand the concept and techniques of different types of Data Organization and Sequence Databases with different types of Analysis Tools for Sequence Data Banks
CO3:	Acquire the knowledge of the DNA Sequence Analysis
CO4:	Analyze the performance of different types of Probabilistic models used in Computational Biology

Course Content:

Introduction to Molecular Biology [10L]

Concepts of Cell, tissue, types of cell, components of cell, organelle. Functions of different organelles. Concepts of DNA: Basic Structure of DNA; Double Helix structure; Watson and crick model. Exons and Introns and Gene Concept. Concepts of RNA: Basic structure, Difference between RNA and DNA. Types of RNA. Concept of Protein: Basic components and structure. Introduction to Central Dogma: Transcription and Translation Introduction to Metabolic Pathways.

Sequence Databases [4L]

Introduction to Bioinformatics. Recent challenges in Bioinformatics. Protein Sequence Databases, DNA sequence databases. sequence database search programs like BLAST and FASTA. NCBI different modules: GenBank, OMIM, Taxonomy browser, PubMed

DNA Sequence Analysis [10L]

DNA Mapping and Assembly: Size of Human DNA, Copying DNA: Polymerase Chain Reaction (PCR), Hybridization and Microarrays, Cutting DNA into Fragments, Sequencing Short DNA Molecules, Mapping Long DNA Molecules. DeBruijn Graph. Sequence Alignment: Introduction, local and global alignment, pair wise and multiple alignment, Dynamic

Programming Concept. Alignment algorithms: Needleman and Wunsch algorithm, Smith-Waterman.

Introduction Probabilistic models used in Computational Biology [7L]

Probabilistic Models; Hidden Markov Model: Concepts, Architecture, Transition matrix, estimation matrix. Application of HMM in Bioinformatics: Genefinding, profile searches, multiple sequence alignment and regulatory site identification. Bayesian networks Model: Architecture, Principle, Application in Bioinformatics.

Biological Data Classification and Clustering [4L]

Assigning protein function and predicting splice sites: Decision Tree

Course Name: Embedded System

Course Code: IT802B

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisite:

Knowledge of basic microprocessor and microcontroller.

Course Objective:

An ability to design a system, component, or process to meet desired needs within realistic constraints, learn debugging techniques for an embedded system

Course Outcome:

After completion of the course, the students will be able to

CO1:	Understand the architecture and classifications of different embedded systems and the related programming knowledge.
CO2:	Identify the key concepts of embedded systems like I/O, timers, interrupts, interaction with peripheral devices.
CO3:	Choose case-specific debugging technique for an embedded system.

Module I: [4L]

Introduction to the Embedded System: Embedded system Vs General computing systems, Purpose of Embedded systems, classifications of embedded systems, fundamentals of embedded processor and microcontrollers, CISC vs. RISC.

Module II: [8L]

Serial and parallel communication: devices and protocols, wireless communication: devices and protocols, parallel communication network using ISA, PCI, PCT-X, Internet embedded system network protocols, USB, Bluetooth.

Module III: [7L]

Program Modeling Concepts; Fundamental issues in Hardware software co-design, Unified Modeling Language (UML), Hardware Software trade-offs DFG model, state machine programming model, model for multiprocessor system.

Module IV: [6L]

Real Time Operating Systems: Operating system basics, Tasks, Process and Threads, Multiprocessing and multitasking, task communication, task synchronization, qualities of good RTOS.

Module V: [10L]

PIC microcontroller: introduction, architecture, comparison of PIC with other CISC and RISC based systems and microprocessors, assembly language programming, addressing modes, instruction set, Interfacing with various sensors and actuators using PIC microcontroller. Programming concepts and embedded programming.

Text Books:

1. Introduction to Embedded Systems: Shibu K. V. (TMH)
2. Embedded System Design – A unified hardware and software introduction: F. Vahid

Reference book:

1. Embedded Systems: Rajkamal (TMH)
2. Embedded Systems: L. B. Das (Pearson)
3. Embedded System design: S. Heath (Elsevier)
4. Embedded microcontroller and processor design: G. Osborn (Pearson)

Course Name: Internet of Things

Course Code: IT802C

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Operating System, Wireless Sensor Networks, Computer Networks, Cryptography, Communication Technology, Python Programming Language, and Cloud computing.

Course Objectives:

The objective of the course is to learn and understand Internet of Things (IoT) in detail and identifies the application potentials of this technology.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic concepts of IoT and it's architectures.
CO2:	Apply the concepts of IoT to design different smart tools.
CO3:	Analyze different issues in the domain of IoT and understand the practical applications of IoT.
CO4:	Evaluate and analyze different solution for the real life problems of IoT.

Course Content:

Wireless Sensor Network [4L]:

Network and Communication aspects, Wireless medium access issues, MAC protocol, Routing protocols, Sensor deployment and Node discovery, Data aggregation and dissemination, Topology, Connectivity, Single-hop and Multi-hop communications.

Fundamental of IoT [4L]:

The Internet of Things, Time for Convergence, Towards the IoT Universe, Internet of Things Vision, IoT Strategic Research and Innovation Directions, IoT Applications, Future Internet Technologies, Infrastructure, Networks and Communication, Design challenges, Development challenges, Security challenges, Other challenges.

IoT and M2M [5L]:

Main design principles and needed capabilities, IoT architecture outline, standards , M2M and IoT Technology Fundamentals, Devices and gateways, Local and wide area networking, M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. M2M to IoT Architectural Overview, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.

IoT Architecture [6L]:

Introduction, Architecture Reference Model- Introduction, Reference Model and architecture, IoT reference Model, IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views.

IoT Privacy, Security and Governance [7L]:

Introduction, Overview of Governance, Privacy and Security Issues, Access Control, Authentication and Authorization, Distributed trust in IoT, Secure Platform design, Smart Approach. Data Aggregation for the IoT in smart cities, Intrusion detection and prevention, Security attacks and functional threats.

IoT Layers Architecture [6L]:

PHY/MAC Layer - 3GPP MTC, IEEE 802.11, IEEE 802.15, Wireless HART, Z-Wave, Bluetooth Low Energy, Zigbee Smart Energy, DASH7; Network Layer - IPv4, IPv6, 6LoWPAN, 6TiSCH, ND, DHCP, ICMP, RPL, CORPL, CARP ; Transport Layer - TCP, MPTCP, UDP, DCCP, SCTP TLS, DTLS; Session Layer - HTTP, CoAP, XMPP, AMQP, MQTT; Service Layer - oneM2M, ETSI M2M, OMA, BBF.

IoT Applications for Value Creations [4L]:

Introduction, IoT applications for industry: Future Factory Concepts, Smart Objects, Smart Applications, Four Aspects in your Business to Master IoT, Big Data and Serialization, IoT for Retailing Industry, Oil and Gas Industry, Real-time monitoring and control of processes - Deploying smart machines, smart sensors, and smart controllers with proprietary communication and Internet technologies, Remote control operation of energy consuming devices.

Text Books:

1. Internet of Things : Architecture and Design Principles, Raj Kamal, McGraw Hill Education; First edition.
2. Internet of Things fundamentals, David, Pearson Education.
3. Internet of Things by Tripathy and Anuradha, CRC Press.

Reference Books:

1. Getting Started With The Internet Of Things: Connecting Sensors and Microcontrollers to the Cloud, Cuno Pfister O'Reilly
2. Internet of Things (A Hands-on-Approach), Vijay Madiseti and ArshdeepBahga, Orient Blackswan Private Limited - New Delhi; First edition.

CO4	1	3	1	2	2	1	1	2	3	1		2

Course Name: Deep Learning

Course Code: IT802D

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Linear Algebra, Machine Learning

Course Objective:

The objective of the course is to present an introduction to deep learning systems, with an emphasis on introducing major deep learning algorithms, the problem settings, and their applications to solve real world problems.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basics of Machine Learning & Deep Learning techniques that make it useful to real-world problems.
CO2:	Apply Deep learning algorithms such as supervised, semi-supervised, and unsupervised.
CO3:	Analyze various Deep learning techniques to investigate real world applications.
CO4:	Evaluate and create model for finding the solution of real world industry issues and problems.

Course Content:

Module I: Introduction [8L]:

Introduction to Deep Learning, Bayesian Learning, Decision Surfaces, Linear and Logistic Regression. Introduction to Neural Network, Multilayer Perceptron, Back Propagation Learning, different activation functions, Optimization Techniques, Gradient Descent, Batch Optimization

Module II: Convolution Neural Networks [5L]:

Convolutional Neural Network, Building blocks of CNN, Transfer Learning, Recent Trends in Deep Learning Architectures, Residual Network, Skip Connection Network, Fully Connected CNN etc. ConvNets: Basic concepts of Convolutional Neural Networks starting from filtering. Convolution and pooling operation and arithmetics of these. ConvNet Architectures: Discussions on famous convnet

Module III: Recurrent Neural Networks [4L]:

LSTM, GRU, Encoder Decoder architectures, Discussion on Recurrent Neural Networks (RNNs), Long-Short Term Memory (LSTM) architectures, Attention.

Module IV: Deep Unsupervised Learning [6L]:

Unsupervised Learning with Deep Network, Autoencoders, Variational Autoencoders, Adversarial Generative Networks, Autoencoder and DBM, Revisiting Gradient Descent, Momentum Optimizer, RMSProp, Adam

Module V: Computer Vision [6L]:

Classical Supervised Tasks with Deep Learning, Image Denoising, Semanticd Segmentation, Object Detection etc. LSTM Networks, Image segmentation, object detection, automatic image captioning, Image generation with Generative adversarial networks, Attention models for computer vision tasks.

Module VI: Applications of Deep Learning[7L] :

Generative Modeling with DL, Variational Autoencoder, Generative Adversarial Network Revisiting Gradient Descent, Momentum Optimizer, RMSProp, Adam, Introduction to NLP and Vector Space Model of Semantics

Text Books:

1. Bengio, Yoshua, Ian J. Goodfellow, and Aaron Courville. "Deep learning." An MIT Press book in preparation. (2015).
2. Satish Kumar, Neural Networks: A Classroom Approach, Tata McGraw-Hill Education,

Reference Books:

3. Bishop, C. ,M., Pattern Recognition and Machine Learning, Springer, 2006.

CO4	3	3	3	1	2	-	-	-	-	-	-	3

Course Name: Data Sciences

Course Code: IT803A

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisite:

Basic knowledge in data storage and retrieval, Knowledge in Quantitative Aptitude and Statistics, Proficiency in Algorithms and Computer Programming Skills.

Course Objective:

Demonstrate knowledge of statistical data analysis techniques utilized in business decision making, Apply principles of Data Science to the analysis of business problems, Use data mining software to solve real-world problems.

Course Outcome

After completion of this course student will be able to

CO1:	Demonstrate proficiencies with statistical and probabilistic data analysis.
CO2:	Evaluate different statistical analysis mechanisms over various datasets utilizing modern software tools.
CO3:	Apply the statistical knowledge to build and assess different data-driven models.
CO4:	Demonstrate skill in data engineering like storage, extraction, transformation, loading, pre-processing, feature identification, and data mining.

Course Content:

Module 1: Introduction [4L]:

Introduction to Data Science – Evolution of Data Science – Data Science Roles – Stages in a Data Science Project – Applications of Data Science in various fields – Data Security Issues.

Module 2: Data Collection and Data Pre-Processing [8L]:

Data Collection Strategies – Data Pre-Processing Overview – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization.

Module 3: Exploratory Data Analytics [8L]:

Descriptive Statistics – Mean, Standard Deviation, Skewness and Kurtosis – Box Plots – Pivot Table – Heat Map – Correlation Statistics – ANOVA.

Module 4: Model Development [8L]:

Simple and Multiple Regression – Model Evaluation using Visualization – Residual Plot – Distribution Plot – Polynomial Regression and Pipelines – Measures for In-sample Evaluation – Prediction and Decision Making.

Module 5: Model Evaluation [7L]:

Generalization Error – Out-of-Sample Evaluation Metrics – Cross Validation – Overfitting –

Under Fitting and Model Selection – Prediction by using Ridge Regression – Testing Multiple Parameters by using Grid Search.

Course Name: Cyber Law and IPR

Course Code: IT803B

Contact: 3:0:0

Total Contact Hours: 35

Credit: 3

Prerequisites:

Concepts of Computer Networking, Network Security

Course Objectives:

The objective of the course is to explain critical information infrastructure related to cyber security, explain the legal and regulatory framework to enable a safe and vibrant cyberspace, analyze cyber security that promotes safe and appropriate use of cyberspace, describe national/international cyber security capabilities.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the policy issues related to electronic filing of documents.
CO2:	Identify the importance of lawful recognition for transactions through electronic data interchange and other means of electronic communication.
CO3:	Analyze the effectiveness of the prevailing information security law practices.
CO4:	Judge the architecture that can cater to the needs of the social information security.

Course Content:

Introduction of Cybercrime [6L]:

Definition cybercrime, Forgery, Hacking, Software Piracy, Computer Network intrusion, Category of Cybercrime, how criminals plan attacks, passive attack, Active attacks, cyber stalking. Overview of Indian Legal System, Introduction to IT Act 2000, Amendments in IT Act, Cyber Laws of EU, USA, Australia, Britain.

Computer Ethics, Privacy and Legislation [6L]:

Computer ethics, moral and legal issues, descriptive and normative claims, Professional Ethics, code of ethics and professional conduct. Privacy, Computers and privacy issue, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT, Legal Policies, legislative background.

Cybercrime Mobile & Wireless Devices [6L]:

Security challenges posted by mobile devices, cryptographic security for mobile devices, Attacks on mobile/ cell phones, Theft, Virus, Hacking. Bluetooth, Different viruses on laptop.

Tools and Methods used in Cybercrime [7L]:

Proxy servers, password checking, Random checking, Trojan Horses and Backdoors; DOS & DDOS attacks; SQL injection, buffer over flow.

Intellectual Property Rights Issues [10L]:

Copyrights, Jurisdiction Issues and Copyright Infringement, Multimedia and Copyright issues, WIPO, Intellectual Property Rights, Understanding Patents, Understanding Trademarks, Trademarks in Internet, Domain name registration, Software Piracy, Legal Issues in Cyber Contracts, Authorship, Document Forgery.

Text Books:

1. Cyber security by Nina Gobole & Sunit Belapune; Pub: Wiley India.
2. Textbook On Cyber Law by Pavan Duggal, Pub: Univarsal

Course Name Cluster and Grid Computing

Course Code: IT803C

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Networking, Operating System, Computer Architecture

Course Objectives:

The objective of the course is to learn and understand Cluster and Grid computing in details and identify the usage of it.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the basic architecture of Cluster and Grid computing
CO2:	Apply the knowledge of Cluster and Grid computing in the evaluation of the computing model
CO3:	Analyze Grid architecture, data management and security issues
CO4:	Evaluate the different models and solutions provided in the field of Cluster and Grid computing

Course Content:

Cluster Computing [3L]

Approaches to Parallel Computing, How to Achieve Low Cost Parallel Computing through Clusters, Definition and Architecture of a Cluster, Functionality of a Cluster can Offer. Categories of Clusters

Cluster Middleware [3L]

Levels and Layers of Single System Image (SSI), Cluster Middleware Design Objectives, Resource Management and Scheduling, Cluster Programming Environment and Tools

Cluster Architecture [4L]

Early Cluster Architectures, High Throughput Computing Clusters, Condor.

Network Protocols and IO [5L]

Networks and Inter-connection/Switching Devices, Design Issues in Interconnection Networking/Switching, Design Architecture-General Principles and Trade-offs, HiPPI, ATM (Asynchronous Transmission Mode), Myrinet, Memory Channel (MC), Gigabit Ethernet

Introduction to Grid Computing [4L]

The Data Centre, the Grid and the Distributed / High Performance Computing, Cluster Computing and Grid Computing, Meta-computing – the Precursor of Grid Computing, Scientific,

Business and e-Governance Grids, Web Services and Grid Computing, Business Computing and the Grid – a Potential Win – win Situation, e-Governance and the Grid.

Technologies and Architecture [2L]

Clustering and Grid Computing, Issues in Data Grids, Key Functional Requirements in Grid Computing, Standards for Grid Computing, Recent Technological Trends in Large Data Grids

Grid Monitoring [4L]

Grid Monitoring Architecture (GMA) - An Overview of Grid Monitoring Systems- R-GMA - GridICE – MDS- Service Level Agreements (SLAs) - Other Monitoring Systems- Ganglia, GridMon, Hawkeye and Network Weather Service.

Grid Security and Resource Management [3L]

Grid Security-A Brief Security Primer-PKI-X509 Certificates-Grid Security-Grid Scheduling and Resource Management, Gridway and Gridbus Broker-principles of Local Schedulers Overview of Condor, SGE, PBS, LSF-Grid Scheduling with QoS

Data Management and Grid Protocol [4L]

Data Management-Categories and Origins of Structured Data-Data Management Challenges Architectural Approaches-Collective Data Management Services-Federation Services-Grid Portals-Generations of Grid Portals.

Grid Middleware [4L]

List of globally available Middlewares - Case Studies-Recent version of Globus Toolkit and gLite - Architecture, Components and Features. Features of Next generation grid.

Course Name: Entrepreneurship Development

Course Code: IT803D

Contact: 3:0:0

Total Contact Hours: 36

Credit: 3

Prerequisites:

Business Management

Course Objectives:

Understanding the evolution of Entrepreneurship development.

Course Outcome:

After completion of this course student will be able to

CO1:	Understand the meaning and importance of term Entrepreneurship
CO2:	Apply the knowledge in the evaluation of different models.
CO3:	Analyze different problems in the domain entrepreneurship skill development
CO4:	Evaluate the different solutions, rules and regulation provided in the field of developing enterprises

Course Content:

Module 1: Introduction [8L]

Meaning and Importance Evolution of term ‘Entrepreneurship’ ,Factors influencing entrepreneurship’ Psychological factors , Social factors , Economic factor , Environmental factors , Characteristics of an entrepreneur , Entrepreneur and Entrepreneur , Types of entrepreneur , According to Type of Business , According to Use of Technology , According to Motivation , According to Growth , According to Stages , New generations of entrepreneurship viz. social entrepreneurship, Edupreneurship, Health entrepreneurship, Tourism entrepreneurship, Women entrepreneurship etc. , Barriers to entrepreneurship

Module 2: Entrepreneurial Motivation [4L]

Motivation , Maslow’s theory , Herjburg’s theory , McGrigor’s Theory , McClelland’s Need – Achievement Theory , Culture & Society , Values / Ethics , Risk taking behavior

Module 3: Creativity [6L]

Creativity and entrepreneurship, Steps in Creativity , Innovation and inventions ,. Using left brain skills to harvest right brain ideas , Legal Protection of innovation , Skills of an entrepreneur Decision making and Problem Solving (steps indecision making)

Module 4: Organization Assistance [8L]

Assistance to an entrepreneur , New Ventures , Industrial Park (Meaning, features, & examples) , Special Economic Zone (Meaning, features & examples) , Financial assistance by different

agencies, MSME Act Small Scale Industries , Carry on Business (COB) license , Environmental Clearance, National Small Industries Corporation (NSIC)

Module 5: Rules And Legislation [6L]

Applicability of Legislation, Industries Development (Regulations) Act, 1951. , Factories Act, 1948. , The Industrial Employment (Standing Orders) Act, 1946 , Suspension 5.4.2 Stoppage of work , Termination of employment 5.5 West Bengal Shops and Establishment Act, 1963 5.6 Environment (Protection) Act, 1986 , The sale of Goods Ac, 1950 , Industrial Dispute Act 1947

Module 6: Project Report [4L]

Introduction , Idea Selection , Selection of the Product / Service , Aspects of a Project , Phases of a Project , Project Report , Contents of a Project Report
